Excello website copy and design guide

Master update 14 October 2026

Authority and approach

This document is the master guide. Retain its everyday language, client journey, project copy, evidence rules, image register and original references. The updates below supersede conflicting directions from 13 October. No live website, access permission or sharing setting is changed by editing this plan.

Design references: Figma links will be added when supplied.

People and their journey

Your land → Your possibilities → Your investment → Our process and people → Relevant project proof → Your next step.

The visitor can enter at any point. A homeowner may arrive through an article; a developer through free quick land feasibility; an apartment buyer through Aathavan availability. Keep the next step relevant and carry their chosen context into the enquiry without asking again.

Decisions agreed on 14 October

Architecture and Interior Design and Build and Construction share /services. Keep the service scope distinct within the page through Architecture and Interior Design section and Build and Construction section.

Homes is a journey section at /services (Homes section), not another standalone service page.

Property Development and Consultation has its own /developments service page. It covers lands, housing complexes, hospitality and apartments.

Free quick land feasibility is the entry service at /developments (Free quick land feasibility section).

Project Branding remains on /services (Project Branding section) and is linked from Developments. Design and build is the overall coordinated offer, not a duplicate service page.

House4All is a pending product working name. Do not generate, publish or promote /house4all until branding and product scope are approved.

About and Team remain combined at /team. Retain /process as the detailed explanation.

Remove /homev2 from the production page list.

Design desktop and mobile experiences separately. Share approved content, routes, data and accessible components; do not simply shrink or stack the desktop composition.

Remove the satellite, Colombo, Kandy and east coast scroll film. No Three.js camera flight, frame sequence or heavy scroll story. Use restrained motion inspired by DJI Mic Mini.

Balance light editorial sections with dark image and process moments. The earlier instruction against mixing light and dark is superseded.

Navigation and enquiry

Home | Projects | Services | Developments | About & Team | Insights | Contact

Main enquiry action: Tell us about your dream

Free entry action: Get a free quick land check

Buyer action: View available apartments

Desktop exposes the navigation and a short enquiry action. Mobile uses a simple menu and one contextual bottom action. Process is linked within the journey and footer.

Total: 25 active page briefs. Pending product: /house4all, outside this total. Tabs are working document sections, not a count of website pages.

Consolidation and migration

/services/homes content moves into /services (Homes section).

/services/apartments content moves into /developments (Apartments section).

/services/hospitality content moves into /developments (Hospitality section).

Retain the former Homes and Hospitality document tabs as section-copy sources with clear consolidation notes; do not generate duplicate pages from them.

Record any live redirect separately and validate real existing URLs, canonicals and internal links before rollout. Keep established project, article and tool routes. Any permanent retirement of /homev2 should point to / after the replacement is verified. Do not infer that live pages have already been removed.

Delivery order

Update copy and routes in this master. Design desktop and mobile independently. Build the shared content and functional components. Generate each active page in the existing Sites project. Verify navigation, forms, project filters, availability and calculators. Measure performance, repair accessibility and copy issues, then release. React is an implementation choice for the existing stack; Three.js is not a delivery requirement.

Reading the guide

The Home tab keeps the approved client-focused story. Services and Developments contain final page briefs. Desktop UX, Mobile UX and Motion and Performance define separate composition and behaviour. Design and Shared Components and Visual Language define the balanced palette. Project, article, legal, image-register and reference-gallery tabs remain part of the full guide.

Production notes are internal instructions, not public copy. Legal copy remains a holding draft until checked against actual operations. Changing project facts, prices and product terms require current approval.

Use original Excello copy. No em dashes, copied reference sentences or guaranteed returns.

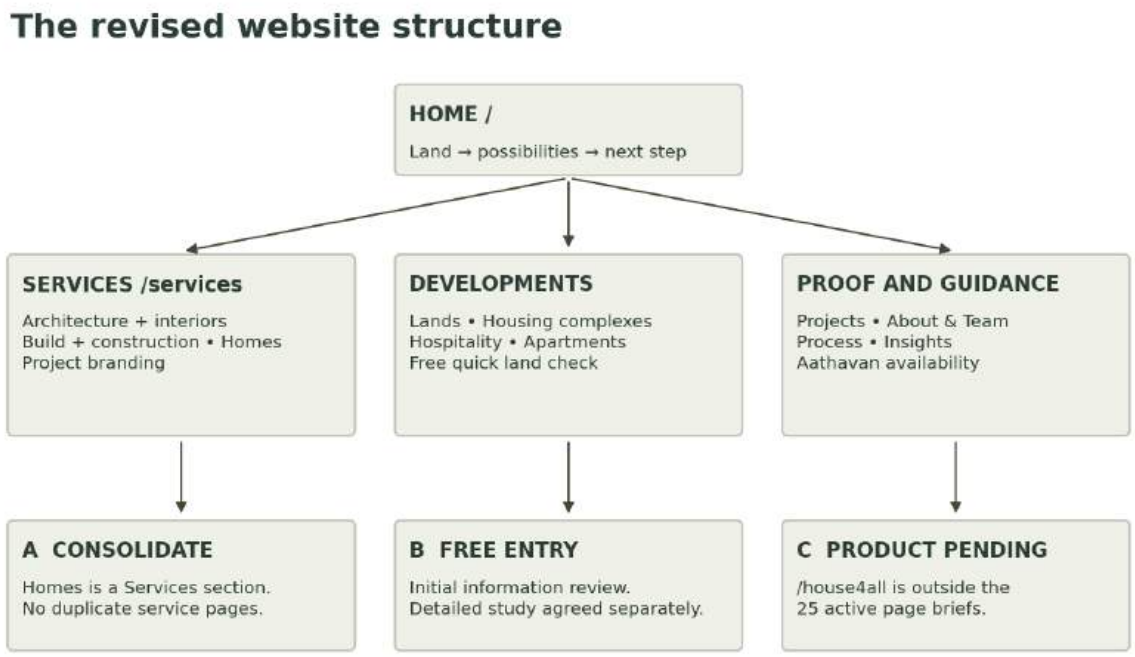

Supplementary implementation requirements | 14 October 2026

Read Supplement Reconciliation for the PDF page-by-page acceptance/rejection map. Supporting operational contracts are now in Enquiry & Integrations, Content & Data Model, Search & Localisation, Measurement & Governance and Release & Migration. The active inventory remains 25 pages; tabs are not page counts. The PDF’s proposed routes and dates are historical planning options, not automatic additions. Keep the current visitor journey and active route/anchor mappings.

Visual sitemap and visitor journeys

Updated 14 October 2026. The full inventory is 25 active page briefs plus one pending product. Working tabs are not separate website routes.

Website structure

A Architecture, interiors, construction and Homes share /services. Project Branding remains a section there.
B Developments covers Lands, Housing complexes, Hospitality and Apartments. Free quick land feasibility is the entry service, with a clearly limited scope.
C /house4all is pending branding. /homev2 is excluded.
Navigation: Home | Projects | Services | Developments | About & Team | Insights | Contact. Projects, process, team, articles, calculator and Aathavan availability support the relevant decision. Keep the established detail and legal routes from Plan & Sitemap.

People and their journey

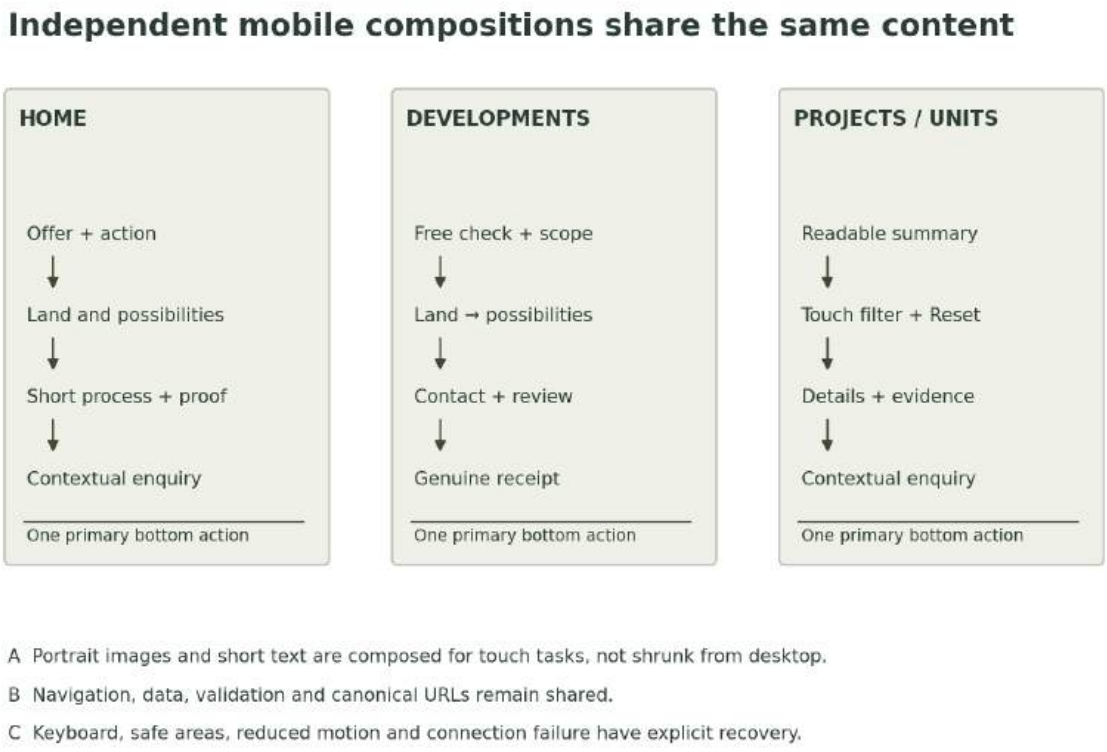

Your land → Your possibilities → Your investment → Our process and people → Relevant proof → Your next step.

People may arrive through a service, article, development or Aathavan unit. Carry that context into the short enquiry. A free check identifies questions worth studying; it does not certify the land.

A WhatsApp draft open is not a submitted enquiry. Actual receipt leads to a responsible person and an appropriate conversation, consultation or site visit.

Separate mobile experience

Mobile uses its own offer, task order, navigation, filters, image compositions and enquiry behaviour. It shares canonical routes, content and data with desktop.
Design each primary mobile task independently. Retain normal scrolling, a clear inline action, safe-area and keyboard clearance, accessible states and context preservation.
See Desktop UX and Mobile UX for the full independent specifications.

Route consolidation

/services/homes → /services (Homes section)
/services/apartments → /developments (Apartments section)
/services/hospitality → /developments (Hospitality section)
These are planning destinations, not a claim that redirects have been applied.

Excello design system and shared components

Updated 14 October 2026

Design intent

Keep the master’s human journey and plain language. Use the light reference’s open reading space and bold, readable sans-serif typography with the supplied image’s dark architectural atmosphere. Dark and light sections are intentional parts of one design, not separate themes the visitor must switch.

Typography, images and layout must make the next step understandable. Do not substitute a generic luxury theme for the person’s journey.

Verified source and proposed tokens

The light reference uses DM Sans with Arial fallback. Its observed body background is #EFF0E8 and main heading colour is #293B32.

The supplied dark image suggests charcoal, deep olive, warm cream and terracotta. Proposed implementation tokens are #171D19 dark canvas, #414733 dark olive, #F2EBDD warm surface, #F5F2E9 inverse text, and #7A432B terracotta.

These dark-image tokens are design choices based on the image, not exact recovered brand CSS. Verify all actual state and image-overlay pairings.

Light and dark rhythm

Use approximately 60–70% light reading surface and 30–40% dark or shaded emphasis as an art-direction starting point, not a rigid pixel quota.

Home: dark image hero; light land and choice sections; short investment explanation; dark olive process/team; light projects and combined insight/client experience; dark closing enquiry with light form controls.

Do not alternate colours mechanically after every section. Group content by the visitor’s decision. Legal, article body, calculator and form reading stay predominantly light.

The mobile homepage has its own composition and may place hero text on a solid light panel above a dark portrait image.

Typography

DM Sans is the primary proposed heading and body family, with Arial and system sans-serif fallbacks. Upright, readable headings; medium-to-bold weight contrast. Do not default to Inter or use decorative italic serif on every heading.

Desktop hero proposal: 72–112 px according to copy and width. Desktop section title: 36–56 px. Mobile hero: 36–44 px, section title: 28–34 px. Body: 16–18 px with approximately 1.5 line height.

Keep one meaningful H1 and logical H2/H3 hierarchy. Do not split copy into separate accessible words to animate it. No embedded image typography.

Long reading measure is approximately 60–75 characters, adjusted for language and device.

Desktop composition

Use a flexible 12-column working grid, around 1200–1320 px content width, 48–72 px side space where appropriate and 72–112 px section spacing.

Use open editorial rows, large evidence images, compact lists and deliberate image/text proportions. Avoid repeated boxed cards and excessive labels.

Desktop details are in the Desktop UX tab; tablet is separately reviewed.

Mobile composition

Design independently around touch tasks, not desktop breakpoints alone. Use approximately 20 px side gutters, 32–56 px section gaps, 44–48 px touch areas and purpose-made portrait or contained image treatments.

Use a dedicated menu, contextual action, filter sheet, progressive enquiry and readable unit summaries as specified in Mobile UX.

Share canonical URLs and data, and keep one coherent accessible reading order. No parallel indexed mobile site or duplicated focusable content.

Shared components

Header and mobile menu share route definitions but use different interaction layouts.

Service sections share semantic heading, summary, scope and contextual action.

Project previews use genuine image, title, location, scope and status.

Process summary uses the master’s six everyday steps and /process link.

Insights and approved client experiences remain one Home section.

Enquiry forms share validation, preservation of inputs and genuine receipt.

Free quick feasibility uses its distinct scope, fields and success message.

Unit summaries share approved data across desktop listing and mobile cards.

Footer uses one short form where appropriate; Contact and legal pages avoid duplication.

Retain Back to top and WhatsApp without covering the mobile bottom action.

State and accessibility rules

Define default, hover, focus, pressed, loading, disabled, error, saved, empty and stale states wherever relevant.

Text on cream uses #293B32; text on charcoal uses #F5F2E9. Check small text at 4.5:1 or better and large text at 3:1 or better; controls, focus and boundaries require appropriate non-text contrast. Ratios are targets, not a conformance claim.

Focus uses a visible outline that changes appropriately for light and dark surfaces. Never rely on colour alone for selected filters or unit status.

All menus, disclosures and galleries support keyboard access, visible close controls and focus return. Errors are associated with fields and success is announced.

Overlay text needs a local contrast treatment tested over each actual image; dark imagery by itself does not prove contrast.

Motion

Read Motion and Performance. Use brief feedback, restrained phrase/section reveals and tiny optional desktop image scale. No Sri Lanka scroll film, Three.js camera journey, scroll hijack, forced intro or continuous background movement.

Mobile and reduced motion default to stable imagery. Keep all links and forms immediately usable.

Imagery and evidence

Real project imagery proves work; illustrative scenes establish atmosphere and are labelled concepts. Use real staff portraits and approved quotes. Keep project geometry, facilities and site facts faithful.

Separate dark-image compositions from palette tokens. Daylight and dusk imagery may coexist when accurately labelled and visually graded; no artificial night recolouring of proof without approval.

Keep master reference images and image register. Do not generate a whole screenshot as a website background.

Implementation exclusions

No purple-blue gradients, gradient text, glowing halos, fake live dots, unsupported statistics, stock inspirational copy, decorative section numbering, identical feature cards, cards inside cards or forced glass panels.

A muted cream surface is permitted, but not the formula of beige pages with ornate italic headings.

No em dashes or copied reference wording.

Shared footer

Heading: Tell us what you have in mind.

Body: Where is your land, and what would you like to create? A few details are enough to begin.

Fields: Your name; Email or WhatsApp number; What are you thinking of building?; Where is your land? (optional).

Button: Start a conversation

Verified handling: show Thanks. Your enquiry has been sent to Excello only after actual receipt. If opening a WhatsApp draft, show Prepare my WhatsApp message and explain that the visitor must send it.

Failure: Your enquiry could not be sent. Please try again, or contact us on WhatsApp.

Contact: +94 77 022 2000 | inquiry@excello.lk

Address: No. 16, St. Rita’s Road, Mount Lavinia, Sri Lanka.

Legal links: Privacy policy | Cookie policy | Terms and conditions

Supplementary implementation requirements | 14 October 2026

Supplement from PDF pages 11–12: define component data and all interaction states, with long-name/translated-copy and optional-image handling. Card styling update: every actual card

uses a consistent rounded outer surface, approximately 20–24 px, and inset media approximately 14–16 px as working defaults. Use shared gutters and comparable card sizes within each group; avoid arbitrary stagger, nested containers and fixed-height text clipping. Keep narrative sections editorial rather than forcing every paragraph into a card. Typography/palette remain the current master's DM Sans and balanced light/dark tokens; do not substitute the PDF serif theme. Validate real contrast and reflow, not just screenshots.

Desktop user experience

Purpose: give people room to explore the land, the possibilities and the team before choosing their next step. This is the desktop composition brief, not the template from which mobile is reduced.

The visitor journey

Your land → Your possibilities → Your investment → Our process and people → Project proof → Your next step.

Retain the approved Home copy and this order. Useful actions remain available throughout, so the visitor need not finish the page to enquire.

Homepage composition

Hero: a dark architectural image with stable readable text, short service explanation and Tell us about your dream. Do not enlarge the headline until it hides the subject or action.

Your land, your plans: a light open composition with a narrow paragraph and a site-context image. The heading asks what the land should make possible.

Project choices: open Homes, Apartments and Hospitality entries with short explanations and individual links. Homes points to /services (Homes section); Apartments and Hospitality point to their /developments sections. The imagery may vary in proportion while every choice remains equally discoverable.

Your investment: a concise decision section with a genuine planning image. Keep the master's focus on value, life and freedom. No guaranteed ROI or unsupported large statistics.

Process and team: a dark olive section with the six everyday steps. Use a compact process list and real team evidence. Link /process and /team.

Projects: a light section showing approved proof for a home, an apartment development and hospitality. Use genuine project status and role labels. View more opens the filtered archive.

Insights and client experiences: retain the combined section. Use three useful articles and an approved quote only if supplied. No empty testimonial placeholder in production.

Your next step: a dark closing section with one short enquiry. Show what happens next. The free quick land check remains a secondary development action, not a competing primary button on every section.

Desktop services and developments

/services uses a compact section navigation and distinct open rows for architecture and interiors, construction, home planning and branding. Development is a linked separate service.

/developments presents Lands, Housing complexes, Hospitality and Apartments, followed by the free entry form and a clear explanation of the detailed study.

Keep forms and data on solid surfaces. A sticky section list may help longer pages, but it must not trap scrolling or obscure headings.

Desktop archive and details

Projects uses visible filters and a deliberate grid. Filtering exposes result count, selected state, Reset and a useful empty state. Each detail page pairs the brief, actual scope and images, with enquiry beside relevant evidence.

Articles use a comfortable reading column; a contents rail is optional for long articles. Team names and copy sit outside portraits. Calculator results show assumptions and an enquiry, not a forced contact gate.

Aathavan availability uses a readable comparison table or structured listing with filters, updated time and a clear unit-specific action.

Desktop acceptance

Check 1024, 1280, 1440 and 1920 px. Verify long headings, keyboard navigation, 200% zoom, contrast over every hero image, unit data and all form states. The tablet composition is independently checked and can use a reading rail only where space supports it.

No motion effect is required for access to copy or actions.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF pages 8 and 11: test the chosen visitor task at 1024, 1280, 1440 and 1920 px, including long content and 200% text zoom. Grouped project/insight/service entries align to shared columns and comparable media areas. Tall buildings need suitable portrait or contained views, not indiscriminate landscape crop. Rounded cards share the Design & Shared Components radii. Any sticky rail leaves headings and controls unobscured. This is a separate desktop specification, not the mobile layout source.

Mobile user experience

This is a separately designed touch journey. It shares the approved story, page URLs, content records and business logic with desktop, but has its own compositions, image crops, navigation, forms and interaction rules. Do not deliver a desktop page merely stacked into one column.

Primary mobile tasks

Understand what Excello can help with.

Choose a home, development, free quick land check or Aathavan buying route.

Find relevant proof.

Start an enquiry without repeatedly entering the same context.

Read and return from an article, unit or estimate.

Mobile homepage

Screen sequence is illustrative, not a fixed number of viewport-height panels.

Opening: compact logo and Menu, the full meaningful headline, one short explanation and Tell us about your dream. Put the text on a solid light surface when a portrait crop cannot reliably provide readable space.

Image: use a separately composed or approved portrait scene below the first decision area. The full building need not be forced into the desktop hero crop. Do not place tiny navigation over a busy dark photo.

Your land: short prompt and the original client-focused body. Keep the person’s aspiration central.

Possibilities: three plainly labelled route rows with descriptive text and modest visual previews. Use tap controls, not hover and not a swipe-only carousel.

Investment: the master’s short explanation, optional supporting image and Consult us. Do not expand it into an additional questionnaire.

Process and team: an overview showing the six everyday steps, with optional accessible detail disclosures. At least the step titles and overall scope remain visible. Link detailed process and team.

Project proof: one readable project entry at a time in normal scroll, with actual location, category, status and role. No carousel is needed to reach a project.

Insights and experience: article titles and summaries remain readable; approved quote follows them when available.

Next step: a small enquiry with the context already selected and editable. Explain what happens next.

Mobile navigation

Use a labelled Menu button, visible Close and normal links: Home, Projects, Services, Developments, About & Team, Insights, Contact. Include How we work as a useful secondary link. Show Tell us about your dream and Free quick land check as clear actions in the menu.

Manage focus on open and close; support Escape and keyboard access; release scroll locking correctly. Do not create a second indexed mobile domain or infer the layout from user-agent strings.

Contextual bottom action

Home, Services and Process: Tell us about your dream or the current enquiry context.

Developments: Get a free quick land check.

Aathavan availability: Enquire about this unit only after a unit is selected; otherwise View available apartments.

Articles: link to the relevant service or calculator when useful, not a permanent large lead bar.

Keep only one primary bottom action. Preserve WhatsApp and Back to top in the agreed interface but place them so they do not overlap this action. Move or hide the bottom bar when a menu, cookie choice, form or on-screen keyboard is open. Honour device safe areas.

The bar is a convenience, never the sole access to an action.

Services mobile composition

Begin with a short intro and plain service options. Each service detail has a short summary, clear scope disclosure, relevant proof and contextual enquiry.

Homes is an in-page section. Anchor links scroll to the visible heading below any sticky header; the visitor can return to the chooser without losing page context.

Do not convert an entire desktop wide row into a miniature side-by-side panel. Images can follow the summary instead of preceding it when the visitor needs the explanation first.

Developments and free quick land check

Show the free entry offer and the four development uses early.

Use three brief form stages: Land location and optional size; What you are considering; Name and preferred contact. Present the scope of the free check before submission.

Always provide Back, retain entered values and announce errors. Include Not sure for intent and optional size. The final screen shows the submitted summary and next step only after actual receipt.

On smaller or assistive-technology screens, a single sequential labelled form is equally acceptable if the staged version adds friction. No mandatory upload or identity document.

Projects mobile composition

Use a Filter button with the active count and an accessible sheet or inline disclosure. Filters have Apply and Reset, a visible result count and a clear no-result explanation. Project cards show title and scope outside the image.

Preserve selections and return position when visiting a project and going back. Include all projects in crawlable content; filtering must not make the archive empty for crawlers.

Gallery navigation supports tap and keyboard, a visible close button and focus return. Each caption identifies photograph, render or concept accurately.

Aathavan mobile composition

Use unit summaries with floor, bedrooms, area with basis, approved price terms, status and last verified time. Filters can open in a sheet; no essential attribute is available only in a sideways desktop table.

A unit enquiry carries unit context to the same lead handler. Sold, unavailable and stale-data states offer an appropriate next step. Do not turn an enquiry into a reservation confirmation.

Do not ask whether the buyer wants the unit for family, living or investment as a mandatory funnel question.

Contact and calculator

Use the right input mode and autocomplete for email or phone. Fields have persistent labels. Keep optional details optional. Preserve all values on connection failure.

If a page action prepares a WhatsApp draft, label it clearly and explain that the person must tap Send in WhatsApp. A WhatsApp click is not a submitted lead.

For the calculator, use a short sequential input flow, clear units and a readable estimate with versioned assumptions. Show results before an optional enquiry.

Mobile visual and performance rules

Primary test widths: 360, 375, 390 and 430 px; also check 320 px reflow and landscape. Use approximately 20 px gutters, 16–18 px body text and 44–48 px minimum working touch areas.

Dark image moments remain short; forms and long reading use solid light surfaces. Do not animate every paragraph, pin an extended scene or download the desktop film to a phone.

Use native scrolling. Reduced motion gets the same content, actions and stable images.

Shared technical contract

Both compositions use the same canonical URL, accessible semantics, inventory authority, enquiry validation and CMS records. Render one coherent reading order for each layout, not two duplicated focusable pages hidden with CSS. Content priorities may differ while essential information remains available on both.

Mobile layout quality must be approved as its own design deliverable, with task walkthroughs on a real touch viewport.

Acceptance tasks

From Home, request a home conversation.

From Developments, submit the free quick land check including a Not sure answer.

Filter projects, open a detail and return with the filter preserved.

Find an Aathavan unit and make a unit enquiry.

Complete an estimate and read its assumptions.

Repeat with keyboard, zoom, reduced motion and a failed connection. Check the keyboard never covers the submit button.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF pages 8, 11 and 15: validate 320 px reflow, main 360–430 px widths, landscape and either side of content-driven layout transitions. Preserve all essential information

and return context. Rounded cards retain full-width readable text and appropriate crop/focal point; no fixed-height caption clipping or swipe-only access. Keyboard, cookie controls, menu and contextual bottom action must not collide. Test a failed enquiry, free check with Still exploring, filtered project return, selected-unit enquiry and an ungated estimate. Keep this independently designed touch composition authoritative over the PDF’s desktop-stack example.

Restrained motion and performance

The satellite and Sri Lanka city-to-hill-to-coast story is removed. This replaces section 9 of the earlier upgrade report and any previous Three.js scroll-flight proposal.

Reference intent

Use DJI Mic Mini as a reference for clear section focus, image emphasis, controlled reveals and strong pacing. Translate that restraint into architecture. Do not copy DJI's assets, product geometry, marketing language or heavy video behaviour.

The public page and browser inspection provided composition cues; media did not fully play in this browser. Exact timings below are Excello design specifications, not measurements of DJI's implementation.

Approved motion vocabulary

Controls: 160–220 ms for hover, focus and pressed feedback. Feedback should never delay the click or submission.

Section introduction: 300–450 ms opacity with 6–10 px travel, once when entering view. Keep the paragraph readable from the start if scripts fail.

Desktop image emphasis: at most a 1.00 to 1.02 scale over a short natural-scroll interval on one or two large images. Text and controls do not move with the image.

Image hover: optional 1.01 scale, no layout reflow and no mobile dependence.

Headline emphasis: reveal a complete phrase or line, at most one or two phrases per section. No typewriter, word-by-word chase, clipped heading or giant animated paragraph.

Menu and filter sheet: 180–240 ms, interruptible, with correct focus and scroll behaviour.

Section colour changes come from adjacent solid surfaces; no continuous animated colour wash.

Desktop and mobile differences

Desktop can use slight image scale and short coordinated heading/image reveals.

Mobile defaults to stable image placement and a brief opacity reveal where useful. No pinned full-screen sequence, prolonged scrub animation, satellite frames or WebGL.

Both use ordinary scrolling and immediate links. Reduced-motion mode removes travel, scale, scrub and smooth-scroll animation while retaining all information.

Pause or disable looping background media. Do not autoplay YouTube in the hero.

Implementation

Prefer CSS transitions and IntersectionObserver for entry state. Load only necessary interaction code. Clean up observers and listeners. Make reveal content visible before enhancement and recover when JavaScript fails.

No Three.js dependency is needed for this visual system. Reconsider a richer effect only after measured need and performance acceptance; it is not on the current delivery backlog.

Use responsive image files, explicit dimensions and focal-point crops. Do not lazy-load the main LCP image. Lazy-load below-fold media and activate chat, maps and galleries on demand.

Proposed performance acceptance

Field target where data exists: LCP at most 2.5 s, INP at most 200 ms, CLS at most 0.1 at the 75th percentile.

Working mobile asset budget: aim for about 1 MB before optional media, hero image around 150–300 KB where quality permits, and no eagerly loaded scroll frame set. Establish the platform baseline before final custom-code budgets.

Check cold-cache mobile loading, navigation, form input, scrolling and menu/filter opening on an ordinary device. Record before and after under comparable conditions.

Do not claim that the design is faster until measured. If an effect causes jank, remove or simplify it before adding another library.

Measurement and funnel checks

Separate route clicks, WhatsApp draft opens and form starts from actual accepted enquiries. Accepted means durably saved by the connected enquiry service.

Carry intent, route and relevant project/unit/estimate context to the lead platform. Keep personal details out of analytics.

Review qualified enquiry, consultation and site-visit outcomes with the responsible team. Reject engagement gains that coincide with lead failures or impaired accessibility.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF pages 20–21: measure a homepage, project, Contact and availability page before/after comparable changes. Aim for ≤150 KB compressed added interaction code, conditional on the measured platform baseline; this is a proposed budget, not a measured pass. Explicit media sizes, appropriate responsive files, no hero lazy-loading and small font sets reduce avoidable shifts. Below-fold assets are deferred; informative video has user-triggered playback, captions/transcripts and stable poster. Widget/map failures leave direct actions available. The removed geographic film and frame sequence remain outside scope. Event definitions and outcome review are in Measurement & Governance.

Small house product pending branding

Working reference: House4All

Planning route: /house4all

Status: pending, not an active website page and not an approved public product name.

Why this tab exists

The product needs branding before its website page is designed or published. Keep its product research and earlier campaign context as inputs, but do not place House4All in the main navigation or present it as an available approved package.

Inputs required

Approved name, identity and language variants.

Approved package price, dated inclusions and exclusions.

Verified plans, areas, roof options, material specifications and structural responsibility.

Site suitability, foundation and utility allowances, approval responsibilities, programme conditions and warranty terms.

Actual or accurately labelled imagery and a confirmed enquiry owner.

Future page journey

Is this type of home right for me?

What is included?

Will it work on my land?

What can I add later?

What does the approved package cost?

What happens after I enquire?

Use the brand decision and approved fact sheet to write the page. Keep the construction service enquiry available meanwhile.

Production rule

Do not generate a new product logo, price claim, launch date, guarantee or page from this placeholder. The final product route may change with branding; record it once agreed. This tab is a planning source, not visitor-facing copy.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF page 14: the older House 4 All price/timeline/product-page proposal does not authorise a launch. A future fact sheet must approve standard plans, roof/material alternatives, base scope, foundation/services/access/transport exclusions, extensions/upgrades, programme conditions and any warranty eligibility. Reconcile historical prices in one dated price book. Keep the final brand/route pending.

Home

Route: /
Page title: Architecture, Design and Build in Sri Lanka | Excello

Hero

Headline: Have a land? Let’s talk about what it could become.
Body: We can help you design and build a home, an apartment development or a hospitality project in Sri Lanka.
Primary button: Tell us about your dream
Secondary link: See our projects

Your land, your plans

Heading: What would you like your land to do for you?
Body: A small house of your own. More room for the family. Apartments to sell or rent. A place guests will want to return to.
You may have a clear idea, or you may be weighing up the possibilities. We’ll start with your land, your budget and what you want from the project.
Button: Talk through your ideas

Project choices

Homes
A home shaped around your daily life, your land and the years ahead.
Link: Explore homes
Destination: /services (Homes section)

Apartments
A development planned around the site, future residents and the numbers that need to work.
Link: Explore apartment development
Destination: /developments (Apartments section)

Hospitality
Places to stay, meet and spend time, with the guest experience considered from the beginning.
Link: Explore hospitality
Destination: /developments (Hospitality section)
Supporting link: Explore land and housing development

Destination: /developments

Your investment

Heading: Make the most of what you have.
Body: Whether it’s a small house or a multi-storey apartment building, the early decisions matter. We help you weigh up what fits the site, what you can afford and how the project could create lasting value.
A place to live well. More freedom. An investment for the future. Your project can mean more than one thing.
Button: Consult us
Supporting action: Get a free quick land check
Destination: /developments (Free quick land feasibility section)
Production note: Keep Consult us primary here. The free check has the limited scope defined in Developments.

Process and team

Heading: One project. One team. From our first meeting to handing over.
Body: You shouldn’t have to piece the whole project together on your own. We bring the people and decisions into one coordinated process, so you know what happens next.
Step: First, we talk.
We get to know you, your land and your plans.
Step: Then, we work out the brief.
We agree what the project needs to do and what it can reasonably cost.
Step: We design it together.
You see the ideas develop and help shape the direction.
Step: We get the details ready.
Drawings, consultants, costs and approvals are brought together.
Step: We build.
The agreed design is carried through the work on site.
Step: We hand it over.
We check the finished work and explain what you need to know.
Links: How we work | Meet the team

Projects

Heading: See how it comes together.
Body: See one relevant project from each category: homes, apartments and hospitality.
Residential: Bambalapitiya Residence (TBD)
Apartments: Aathavan Apartments
Hospitality: Panimozhi Club House
Button: See more projects

Insights and client experiences

Heading: What we've learned along the way.
Body: Every project brings its own questions. Here are some of the things clients ask us, the decisions we work through and the experience we can bring to yours.
Article: What should you budget before building?
Article: Making a small plot work for you
Article: Choosing a design and construction route
Link: Read our insights

Production note: Place an approved client quote alongside these articles. The quote must be supplied or verified with the client's permission. Keep this as one shared section, not a new standalone testimonials page.

Footer contact form

Heading: Tell us what you have in mind.
Body: Where is your land, and what would you like to create? A few details are enough to begin.
Fields: Your name; Email or WhatsApp number; What are you thinking of building?
Optional field: Where is your land?
Button: Start a conversation
Links: Privacy policy | Cookie policy | Terms and conditions

Production note: Use the shared footer and form states. Primary hero and consultation buttons lead to this enquiry form with the relevant context preselected.

Page design and generation prompt

Generate only the Home page at / in the existing Excello Sites project. Read this page's original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Hero → Your land, your plans → Project choices → Your investment → Process and team → Projects → Insights and client experiences → Footer contact form.

Desktop hero: full-width H01 with dark architectural atmosphere, stable readable headline, short body and enquiry action. Use a restrained local contrast treatment. Mobile hero: separately designed light text area, clear action and purpose-made portrait or contained H01 image. Read Mobile UX; do not shrink the desktop overlay. Label concept imagery accurately.
Your land, your plans: text left, H02 neighbourhood/site view right; no overlay.
Project choices: three open editorial entries, varied proportions, headings and links below images. Homes uses a terrace, Apartments uses P-AAT-01, Hospitality uses approved hospitality imagery; no identical boxed cards.
Your investment: compact text column beside S03/B01 planning-table detail. No statistics or guaranteed returns.
Process and team: a dark olive section with six plain steps, fine separators and one real T01 team-at-work image. Link Process and combined About & Team.
Projects: large selected cover plus two smaller entries for Bambalapitiya, Aathavan and Panimozhi. Actual approved images only; keep the residence selection pending if not confirmed.
Insights and client experiences: three 3:2 covers B03/B02/B06 with titles below; approved quote beside them only if available. One combined section.
Footer contact form: a dark closing section with legible light controls and one clear enquiry form. Hero and consultation actions scroll here with editable context. Do not display draft production notes as public copy.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Separate mobile experience: use the Mobile UX tab for its own composition, menu, filter sheets, unit summaries and enquiry flow. Share approved content and canonical routes with desktop. Use 44–48 px touch areas, readable image crops and visible focus. Motion follows the restrained Motion and Performance tab; no forced desktop scaling, pinned film or heavy scroll sequence. Keep Back to top and WhatsApp clear of the contextual action and keyboard.

Finish by checking exact copy, public/internal-note separation, links, independently designed desktop and mobile crops, contrast, keyboard behaviour and genuine form/data outcomes. List unresolved assets or connections. Follow the Motion and Performance tab. No Three.js story or frame sequence is required.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF pages 4 and 8–9: keep the approved land-and-client journey and latest headline wording. Expose the offer, primary enquiry and routes before a long narrative. Home commissioning links to /services (Homes section); developers to /developments and its relevant sections; buyers have a distinct View available apartments route. Use approved actual scope/status evidence before making trust claims. Keep Consult us primary in investment and the free quick land check secondary. Do not insert a generic sales/investment qualification question or a guaranteed ROI. Article/quote proof remains one section; omit unavailable quotes. Apply rounded card consistency without converting the whole page into identical feature boxes.

Services

Route: /services

Page title: Architecture Interior Design and Construction in Sri Lanka | Excello

Introduction

Headline: Help at the stage you're at.

Body: You might be deciding what to build, looking for a design team or getting ready to start on site. We'll help you work out what support your project needs.

Primary button: Tell us about your project

Section links: Architecture and interiors | Build and construction | Your home | Project branding

Secondary link: Explore development services

Architecture and Interior Design

Section: Architecture and Interior Design

Heading: Start with how the place needs to work.

Body: We plan the building and its interiors together, looking at the way people will use the space, the light, the climate and the character of the site.

We work through layouts, materials and details with you, so the design grows from a clear brief.

Scope: Brief and site studies; concept design; space planning; interiors; design development; drawing coordination.

Button: Discuss a design brief

Build and Construction

Section: Build and Construction

Heading: Bring the drawings into everyday reality.

Body: Building involves many people and decisions. We help coordinate the work, keep the agreed design in view and deal with the questions that come up on site.

The scope is agreed around the project and the team already involved.

Scope: Pre-construction planning; consultant and contractor coordination; procurement planning; site reviews; progress communication; handover.

Button: Talk about construction

Production note: This is the master's Construction and Project Delivery group, with the clearer visitor label Build and Construction. Describe contractual responsibility and consultant appointments accurately.

Your home

Section: Homes

Heading: A home that works for the way you live.

Body: Tell us about the home you want, the land you have and what you'd like to spend. We'll help you bring those parts together.

You may have saved a few pictures, drawn a rough plan or simply decided it's time for a place of your own. That is enough to start.

Access, neighbours, sunlight, rain and the shape of the plot affect a home. We look at those things before the layout becomes fixed.

We discuss space, materials and cost alongside the design. The drawings, consultants and site work need to tell the same story.

Links: Try the cost calculator | See the process | View Bambalapitiya Residence

Button: Tell us about your home

Production note: Use approved project evidence. Retain the detailed Homes section-copy tab as the writing source; do not create a separate /services (Homes section) page.

Development services

Heading: Considering what else your land could become?

Body: A housing complex, apartments or a hospitality project needs a clear view of the site and the decisions ahead. Start with a free quick land check, then explore the options with us.

Links: Explore developments | Get a free quick land check

Destinations: /developments and /developments (Free quick land feasibility section)

Project Branding

Section: Project Branding

Heading: Give the project a clear identity.

Body: A development also needs a way to introduce itself. We help shape how the project is named, described and presented, so the story matches the place you're creating.

Scope to agree: Project positioning; naming and identity; brochure and sales presentation; visual direction; digital project content.

Button: Discuss project branding

Production note: Confirm actual deliverables and portfolio evidence. No invented campaign outcomes or AI-generated logo as proof.

How we work

Heading: One project, with the right people around it.

Body: We agree the scope with you, then coordinate the work from that starting point. You can appoint us for selected services or discuss a full design and construction route.

Links: Our process | About & Team

Common questions

Can I ask for design only?

Yes. We can discuss a design appointment without a full construction appointment.

Can you join a project that has already started?

Tell us what has been done and share the current drawings. We'll review the stage and what support may be suitable.

Can you work with other consultants?

We coordinate the agreed scope with the specialists and delivery teams involved.

Is the small house product available here?

Production note: Do not publish this FAQ yet. The product working name House4All is undergoing branding and belongs to the pending product brief.

Footer: Shared enquiry footer.

Page design and generation prompt

Generate only /services in the existing Excello Sites project. Architecture and interiors and Build and construction are sections on this page. Homes content is at Homes section. Property Development has a clear link to /developments. Project Branding remains here.

Keep the introduction short and useful. Desktop uses wide open editorial sections, distinct image treatments and a compact section navigation. Mobile uses its own service chooser, shorter summaries and accessible scope disclosures; read Mobile UX, not the desktop layout scaled down.

Use genuine S02 site imagery for construction proof, approved S01 design imagery and real S04 brand collateral. Enquiry actions preselect service context and remain editable. Use the balanced light and dark tokens and restrained motion guide. Keep process/team links and approved copy. No separate architecture, interiors, construction or design-build page is required by this sitemap.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF pages 6 and 13: for each service section explain who it helps, agreed deliverables, client inputs, responsibilities, exclusions and relevant proof. Distinguish design-only, construction-only and coordinated appointments without inventing extra service pages. Independent consultants/authorities must be described accurately. Enquiry context carries the chosen service; future paid work follows an agreed scope. Publish branding outcomes only when evidence supports them.

Consolidation note 14 October 2026

This is retained section-copy material for /services (Homes section). The Services tab defines the combined public page; this tab must not generate a duplicate route.

Homes

Route: /services (Homes section)
Page title: Home Design and Construction in Sri Lanka | Excello

Introduction

Headline: A home that works for the way you live.
Body: Tell us about the home you want, the land you have and what you'd like to spend. We'll help you bring those parts together.
Button: Tell us about your home

Getting started

Heading: You don't need all the answers yet.
Body: You may have saved a few pictures, drawn a rough plan or simply decided it's time for a place of your own. That is enough to start.
We'll ask about your daily routines, the people who will live there and what might change in the years ahead.

The land

Heading: Work with the site.
Body: Access, neighbours, sunlight, rain and the shape of the plot all affect a home. We look at those things early, before the layout becomes fixed.

Design and budget

Heading: Make the important choices early.
Body: We work through the plan, the amount of space you need and the materials you want to use. We discuss cost alongside the design, so you can make choices with a clearer picture.
Link: Try the cost calculator

Building

Heading: Carry the idea through to the finished home.
Body: The drawings, consultant input and site work need to tell the same story. Our agreed design and construction scope brings those decisions together.
Link: See the process

Project proof

Heading: A home on a compact urban site.
Project: Bambalapitiya Residence
Body: See how living areas, private spaces and service areas come together in a multi-storey home.
Link: View the project

Next step

Heading: What would make a home feel right for you?
Body: Tell us about the land and the things you want your home to make possible.
Button: Start a conversation
Footer: Shared enquiry footer.

Page design and generation prompt

Use this Homes copy within the combined Services page at /services (Homes section) in the existing Excello Sites project. Do not generate a standalone Homes page. Read this page's original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Introduction → Getting started → The land → Design and budget → Building → Project proof → Next step.

Introduction: split hero, approved P-BAM-01/P-SEA-01 exterior on right, text and enquiry action left. No overlay. Mobile text first, then 4:5 crop.
Getting started: narrow conversational text beside an optional quiet terrace detail; conceptual imagery follows H01/material prompts and is distinct from proof.
The land: 3:2 real site/context image beside text; do not invent a client site.
Design and budget: text with S01 material/interior detail and a clear calculator link.
Building: open text block, optional real PR05 work detail, Process link.
Project proof: one substantial approved Bambalapitiya cover with editable title and project link, not a fabricated home gallery.
Next step: compact enquiry invitation, then the shared form. Prefill Homes as editable context. Alternate image scale, leaving some sections text-only.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Separate mobile experience: use the Mobile UX tab for its own composition, menu, filter sheets, unit summaries and enquiry flow. Share approved content and canonical routes with desktop. Use 44–48 px touch areas, readable image crops and visible focus. Motion follows the restrained Motion and Performance tab; no forced desktop scaling, pinned film or heavy scroll sequence. Keep Back to top and WhatsApp clear of the contextual action and keyboard.

Finish by checking exact copy, public/internal-note separation, links, independently designed desktop and mobile crops, contrast, keyboard behaviour and genuine form/data outcomes. List unresolved assets or connections. Follow the Motion and Performance tab. No Three.js story or frame sequence is required.

Supplementary implementation requirements | 14 October 2026

The PDF’s proposed /homes route is consolidated into /services (Homes section) under the current master. Retain this as section-copy evidence, not a separately generated page. Add clear brief inputs, relevant approved home proof and links to process/calculator where useful. Compact-product claims remain pending branding and scope approval.

Property Development and Consultation

Route: /developments

Page title: Land and Property Development in Sri Lanka | Excello

Introduction

Headline: Start with the land. Work through the possibilities.

Body: You may be considering a housing complex, apartments or a place for guests to stay. We help you understand the site, test the options and work out a sensible way forward.

Primary button: Get a free quick land check

Secondary link: Discuss your development

Free quick land feasibility

Section: Free quick land feasibility

Heading: Not sure what your land could become?

Body: Start with a free quick land feasibility check. Share the location, approximate size if you know it, and what you have in mind. We'll take an initial look at the information and help you identify what needs checking next.

What you receive: A preliminary discussion of possible uses, apparent questions about access and site context, missing information and a suggested next step.

Scope note: This is an initial information review. It is not a measured survey, planning approval, title check, engineering assessment, valuation, detailed feasibility report or guaranteed development yield. A detailed study or specialist appointment is agreed separately.

No compulsory paid appointment follows the free check.

Button: Get a free quick land check

Lands

Section: Lands

Heading: Understand the site before deciding what to do with it.

Body: Plot size, access, terrain, surrounding uses and available services affect the options. We help bring those questions together, identify what is known and what needs a closer look.

Use cases: A plot you already own; land you are considering; redevelopment of an existing site.

Button: Talk about your land

Production note: Never label a parcel buildable or legally clear from a quick check. Official and specialist confirmation follows where needed.

Housing complexes

Section: Housing complexes

Heading: Plan homes that work together.

Body: A group of homes needs more than repeated plans. Roads, privacy, shared services, landscape, phasing and everyday maintenance affect how the place will work.

We connect the housing brief with the land, the people who will live there and the development budget.

Button: Discuss a housing complex

Hospitality

Section: Hospitality

Heading: A place people want to spend time in.

Body: A hotel, villa or retreat begins with a location and the experience you want to offer. Landscape, climate, arrival, staff movement, service spaces and maintenance need attention from the start.

We work through the brief and possible stages of development. Operating forecasts and financial feasibility involve the appropriate specialists.

Links: Panimozhi Club House | Rudra Wellness Retreat | Relevant approved Sea Esta evidence

Button: Tell us about your hospitality project

Apartments

Section: Apartments

Heading: Plan for the residents. Keep the numbers in view.

Body: An apartment development needs a workable site, a clear market and a budget that makes sense. Unit layouts, parking, privacy, daylight, storage and shared spaces affect everyday use and the development brief.

We help compare options and identify what still needs checking. Construction cost, usable area, selling or rental potential and long-term upkeep all matter.

Returns depend on the market, final costs and delivery. We help you weigh up the decisions without promising a return.

Links: Aathavan project | View available apartments

Button: Discuss your apartment development

Production note: Commissioning a development and buying an Aathavan apartment are separate intentions.

Coordinated delivery

Heading: Keep the project connected.

Body: Architecture, engineering, quantity surveying, approvals, construction and project presentation need to stay aligned. We coordinate the agreed scope with the people responsible for each part.

Links: Our process | About & Team | Project branding

Branding destination: /services (Project Branding section)

From a quick check to a clear brief

First, share what you know about the land.

Then, we identify the questions worth checking.

If you want to continue, we agree the scope and specialist input for a detailed study.

Design and delivery follow the agreed brief and appointment.

Button: Tell us about your development

Footer: Shared enquiry footer.

Free quick check form

Required: Your name; Email or WhatsApp number; Land location or area.

Optional: Approximate land size with unit; What are you considering?; A short note.

Intent choices: Land options; Housing complex; Hospitality; Apartments; Still exploring.

Do not require a deed, NIC, full street address, investment amount or attachment at this first step.

Button: Request my free quick check

Privacy: Read our privacy policy. Please avoid sending sensitive documents through this form.

Success after durable receipt: Thanks. We've received your request for a free quick land check.

Failure: We couldn't send your request. Please try again, or contact us on WhatsApp.

Production note: If the actual implementation only prepares a WhatsApp draft, use Prepare my WhatsApp request and explain that the visitor must review and send it. Do not show a sent confirmation before that happens.

Page design and generation prompt

Generate only /developments. Use four distinct editorial entries for Lands, Housing complexes, Hospitality, and Apartments. Free quick feasibility is visible in the first decision area and has its own Free quick land feasibility section form.

Desktop uses a quiet site image beside a short introduction, four open section links and an embedded quick-check form. Mobile begins with the visitor's question and the free entry action; use a step-by-step form screen with Back, retained values and a genuine receipt.

Real sites and approved project imagery provide evidence. Do not invent land boundaries, sale figures, ROI, permissions or facilities. Retain the independent mobile guide, balanced palette and restrained motion.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF pages 4, 6 and 13: separate land development commissioning from Aathavan property purchase. Feasibility covers the agreed inputs, preliminary output, exclusions and next-stage decisions, not permissions or guaranteed yields. Housing complexes consider circulation/services/privacy/phasing; hospitality considers operator/staff/guest use and maintenance; apartments consider residents and viability. Keep the free quick check's limited scope visible before its form. Use the Enquiry & Integrations receipt/retry contract and approved specialist input for detailed studies.

Consolidation note 14 October 2026

This is retained section-copy material for /developments (Hospitality section). The Developments tab defines the combined public page; this tab must not generate a duplicate route.

Hospitality

Route: /developments (Hospitality section)
Page title: Hospitality Design and Project Delivery | Excello

Introduction

Headline: A place people want to spend time in.
Body: A hotel, villa or retreat begins with a location and the experience you want to offer. We help you turn that into a practical project.
Button: Tell us about your hospitality project

Place and guests

Heading: Start with the setting.
Body: The landscape, climate and arrival experience should shape the design. We ask who the guests are, why they will visit and how the place should feel.

Operations

Heading: Think beyond the guest room.
Body: Staff movement, service areas, maintenance and everyday operations need attention early. They are part of making the guest experience work.

Investment

Heading: Match the idea to the scale of the project.
Body: We work through the brief, spaces, materials and likely development stages. The design needs to support the experience while staying grounded in the budget.
For operating forecasts or financial feasibility, the right specialist input forms part of the wider project team.

Project proof

Heading: Different settings. Different ways to stay.
Projects: Panimozhi Club House; Sea Esta Villas; Rudra Wellness Retreat.
Link: Explore hospitality projects

From first meeting to handover

Heading: Keep the people and decisions together.
Body: We coordinate the agreed design and delivery scope with your appointed consultants and operating team.
Link: Our process

Next step

Heading: What kind of stay are you imagining?
Body: Tell us about the place and the experience you want to create.
Button: Start a conversation
Footer: Shared enquiry footer.

Page design and generation prompt

Use this Hospitality copy within Developments at /developments (Hospitality section) in the existing Excello Sites project. Do not generate a standalone Hospitality service page. Read this page's original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Introduction → Place and guests → Operations → Investment → Project proof → From first meeting to handover → Next step.

Introduction: approved P-PAN-01 hospitality exterior or verified completed hospitality photograph; text beside it, no overlay. If only conceptual service art is available, label it illustrative.
Place and guests: 3:2 shaded social terrace/courtyard; optional conceptual hospitality image using R05/R10 mood, natural people, restrained pool/planting, no resort excess.

Operations: readable text with actual service/circulation detail if available; not another pool photo.
Investment: text-led decision section, no invented occupancy or return graphics.
Project proof: actual Panimozhi and other document-approved project entries. Rudra imagery remains labelled proposed/visualisation.
From first meeting to handover: concise process summary and real coordination photo.
Next step: hospitality enquiry context, shared footer. Mobile: preserve guest-space context, stack in document order.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Separate mobile experience: use the Mobile UX tab for its own composition, menu, filter sheets, unit summaries and enquiry flow. Share approved content and canonical routes with desktop. Use 44–48 px touch areas, readable image crops and visible focus. Motion follows the restrained Motion and Performance tab; no forced desktop scaling, pinned film or heavy scroll sequence. Keep Back to top and WhatsApp clear of the contextual action and keyboard.

Finish by checking exact copy, public/internal-note separation, links, independently designed desktop and mobile crops, contrast, keyboard behaviour and genuine form/data outcomes. List unresolved assets or connections. Follow the Motion and Performance tab. No Three.js story or frame sequence is required.

Supplementary implementation requirements | 14 October 2026

The PDF’s proposed /hospitality route is consolidated into /developments (Hospitality section). Keep this as section copy, not an additional active page. Explain operator/guest/service movement, landscape, maintenance and phasing through verified scope. Hospitality proof must identify built, in-progress, proposed or concept status accurately.

About & Team

Route: /team
Page title: About Excello and Our Team | Sri Lanka

Introduction

Headline: Meet the people behind your project.
Body: Excello brings design, construction and development thinking together. We start by getting to know you and the place you want to create.
Button: Talk to our team

About Excello

Heading: From a first idea to a finished place.
Body: We work with homeowners, property owners and hospitality teams across Sri Lanka. Some clients arrive with a clear brief. Others want help understanding what their land could become.
Our job is to help make the decisions clearer and keep the project connected as it moves forward.

Working together

Heading: Your project matters to you. We want to understand why.
Body: A home or development can mean a lot of things: a place for family, a new business or a longer-term investment. We take the time to understand what matters most, then work through the practical choices with you.

Leadership

Heading: Subash Thavarajasingam
Role: Founder & Chief Executive Officer
Body: Subash leads Excello’s business direction and helps connect the design, development and delivery sides of the work.
Link: Read Subash’s published insights

Architecture and Design

Heading: The people who shape the spaces.
Body: Architects, interior designers and technical team members work through plans, materials and details around the brief.
Production note: Add confirmed names, roles and real portraits. Keep the existing team grouping. Future profiles can open as accessible panels or dedicated pages when approved.

Engineering, Cost and Site Delivery

Heading: The people who help make it work.
Body: Engineering, quantity surveying, procurement and site teams bring the technical and construction decisions together.
Production note: Retain the confirmed team and consultant names. Do not turn external consultants into employees or invent qualifications.

How we work

Heading: One project. One coordinated team.
Body: From the first meeting to handing over, you know which stage you're at and who is responsible for the work.
Link: See our process

Next step

Heading: Let's get to know your project.
Body: Tell us about the land, your plans and where you'd like help.
Button: Start a conversation
Footer: Shared enquiry footer.

Page design and generation prompt

Generate only the About & Team page at /team in the existing Excello Sites project. Read this page's original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and

shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Introduction → About Excello → Working together → Leadership → Architecture and Design → Engineering, Cost and Site Delivery → How we work → Next step.

Introduction: text-led opening beside T02 genuine team/group photograph; no text across faces.
About Excello: conversational text column with one real studio/project image, no invented history, awards or headcounts.
Working together: open prose with T01 coordination photograph.
Leadership: genuine consistent 4:5 portraits, editable names/roles and approved descriptions; do not create synthetic staff. Link CEO-related insights only when document content supplies the intended destination.
Architecture and Design: same portrait component, grouped by discipline.
Engineering, Cost and Site Delivery: same component with actual roles. Keep team biographies in this page; no new profile routes or popup systems inferred.
How we work: text and link to Process.
Next step: simple invitation and shared enquiry footer.
Use consistent portraits without surrounding nested cards. If portraits are missing, keep draft image placeholders and record the gap; never substitute stock people.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Separate mobile experience: use the Mobile UX tab for its own composition, menu, filter sheets, unit summaries and enquiry flow. Share approved content and canonical routes with desktop. Use 44–48 px touch areas, readable image crops and visible focus. Motion follows the restrained Motion and Performance tab; no forced desktop scaling, pinned film or heavy scroll sequence. Keep Back to top and WhatsApp clear of the contextual action and keyboard.

Finish by checking exact copy, public/internal-note separation, links, independently designed desktop and mobile crops, contrast, keyboard behaviour and genuine form/data outcomes. List unresolved assets or connections. Follow the Motion and Performance tab. No Three.js story or frame sequence is required.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF page 13: distinguish employed staff, appointed consultants and delivery partners, with verified roles and approved bios. Link Subash or another person to relevant insights only where genuine authorship is established; otherwise use a general Insights link without implying an author collection. No separate /about or person routes are added. Real portraits and permissions are required.

Our process

Route: /process
Page title: How We Design and Build Your Project | Excello

Introduction

Headline: One project. One team. From the first meeting to handing over.
Body: There are plenty of decisions in a building project. We help you work through them in a sensible order, with the right people involved.
Button: Tell us where you're starting

First, we talk

Internal stage: Discover
Body: We get to know you, your land and what you hope to create. Bring your ideas, questions and any information you already have.
We look at the location, the site and the starting budget. If something needs more investigation, we explain why.
What we need from you: Site location, any survey or title information you can share, your ideas and a starting budget.
What you get: A clearer picture of the questions to answer first.

Then, we agree the brief

Internal stage: Define
Body: We work out what the project needs to do, which spaces are important and what the agreed work will include.
We discuss priorities and the budget so that everyone starts with the same understanding.
What we need from you: Feedback on priorities and agreement on the project scope.
What you get: An agreed brief and the next steps.

We design it with you

Internal stage: Design
Body: We explore layouts and show you how the building could work. We talk through light, movement, materials and the spaces you'll use.
Your feedback helps us develop the design. We review cost as the detail grows.
What we need from you: Decisions on the design options and key materials.
What you get: A developed design direction and drawings for the agreed stage.

We get the details ready

Internal stage: Coordinate
Body: The architectural drawings, structure, building services, cost information and approval requirements need to fit together.
We coordinate the agreed work with the relevant specialists and identify the decisions needed before construction.
What we need from you: Timely decisions on the agreed scope, appointments and selections.
What you get: Coordinated information for the next stage.
Production note: Approval outcomes and timing are determined by the relevant authorities. Describe Excello's actual appointment accurately.

We build

Internal stage: Build
Body: The project moves to site. We coordinate the agreed construction scope, discuss progress and deal with questions as they arise.
Changes are explained and agreed before they become part of the work.
What we need from you: Decisions on proposed changes and payments according to the agreed contract.
What you get: Progress updates and a clear record of agreed decisions.

We hand it over

Internal stage: Handover
Body: We review the finished work, record any outstanding items and explain the information you need to use and care for the place.
Any follow-up responsibilities are set out in the agreed contract.
What you get: The completed project and its agreed handover information.

The team behind it

Heading: The same project, seen through different skills.
Body: Design, engineering, cost planning, procurement and site work all have a part to play. We bring those people into the conversation at the right time.
Link: Meet the team

Where are you now?

Body: You can speak to us at the beginning or discuss support for a project already under way.
Button: Start a conversation
Footer: Shared enquiry footer.

Page design and generation prompt

Generate only the Process page at /process in the existing Excello Sites project. Read this page's original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Introduction → First, we talk → Then, we agree the brief → We design it with you → We get the details ready → We build → We hand it over → The team behind it → Where are you now?.

Introduction: document heading and explanation beside real T01 coordination image. Text outside photograph.
First, we talk: readable step, PR01 genuine meeting or neutral notes detail.
Then, we agree the brief: PR02 real brief/site study.
We design it with you: PR03 approved sketch/model/drawing.
We get the details ready: PR04 actual drawing review.
We build: PR05 genuine construction photo.
We hand it over: PR06 real finished detail or consented handover image.
Use a vertical sequence with ordinary headings and fine separators. Combine images across adjacent steps so three strong photos can explain six stages; no mandatory six-card grid or fake documentary sequence.
The team behind it: real photo and combined About & Team link.

Where are you now?: short enquiry invitation with stage context editable.
Desktop may keep a compact in-page list beside the steps; mobile uses normal flow. No scroll-locked storytelling or decorative numbered labels.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Separate mobile experience: use the Mobile UX tab for its own composition, menu, filter sheets, unit summaries and enquiry flow. Share approved content and canonical routes with desktop. Use 44–48 px touch areas, readable image crops and visible focus. Motion follows the restrained Motion and Performance tab; no forced desktop scaling, pinned film or heavy scroll sequence. Keep Back to top and WhatsApp clear of the contextual action and keyboard.

Finish by checking exact copy, public/internal-note separation, links, independently designed desktop and mobile crops, contrast, keyboard behaviour and genuine form/data outcomes. List unresolved assets or connections. Follow the Motion and Performance tab. No Three.js story or frame sequence is required.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF pages 9 and 13: each everyday stage should clarify its agreed output and responsibility. First meeting: shared goals/known site information. Brief: agreed needs, budget basis and missing checks. Design: reviewed ideas/drawings. Coordination: consultant/drawing/cost/approval responsibilities. Build: agreed delivery scope and progress communication. Handover: agreed checks, information and outstanding items. Describe these as scope-dependent outputs, not blanket guarantees of approval, programme or price.

Projects

Route: /projects
Page title: Architecture, Construction and Development Projects | Excello

Introduction

Headline: See the work.
Body: Homes, apartments, hospitality and commercial spaces. Explore a project to see the brief, the place and the work involved.

Filters

Project type: All projects; Homes; Apartments & developments; Hospitality; Commercial & interiors.
Project stage: All stages; Completed; In progress.
Location: All locations; Colombo area; Eastern Province, Down South, Central,
Action: Clear filters
Results label: Showing [number] projects
No results: No projects match these filters. Try a different selection.
Action: Clear filters
Production note: Map each project to verified categories, stage and location. Use native accessible controls and keep filter results readable. Statuses require a current check.

Next step

Heading: Have something in mind for your own land?
Body: Tell us what you would like to create.
Button: Discuss your project
Footer: Shared enquiry footer.

Page design and generation prompt

Generate only the Projects page at /projects in the existing Excello Sites project. Read this page's original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Introduction → Filters → Project previews → Next step.

Introduction: text-led title and concise description. No separate stock hero; project images carry the page.
Filters: use exactly the categories in the source tab. Accessible text/button controls with selected state and Reset/All action; allow wrapping on mobile. Do not filter by unsupported project status.
Project previews: reuse P-SEA-01, P-AAT-01, P-PAN-01, P-BAM-01, P-KAA-01 and P-RUD-01. Use a spacious two-column editorial grid, consistent 3:2 cover frames and editable project/category captions below. A lead image may be larger, without disrupting reading order. Images must come from actual project sources. Clearly mark proposed/render status where relevant. No fabricated locations or completion dates.
Filters update the list without a full-page animation; maintain keyboard focus, result count and meaningful empty/reset state.
Next step: enquiry invitation and shared footer. Mobile one column with generous image size.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Separate mobile experience: use the Mobile UX tab for its own composition, menu, filter sheets, unit summaries and enquiry flow. Share approved content and canonical routes with desktop. Use 44–48 px touch areas, readable image crops and visible focus. Motion follows the restrained Motion and Performance tab; no forced desktop scaling, pinned film or heavy scroll sequence. Keep Back to top and WhatsApp clear of the contextual action and keyboard.

Finish by checking exact copy, public/internal-note separation, links, independently designed desktop and mobile crops, contrast, keyboard behaviour and genuine form/data outcomes. List unresolved assets or connections. Follow the Motion and Performance tab. No Three.js story or frame sequence is required.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF pages 7 and 19: maintain all approved project links/descriptions in crawlable initial content; distinguish human browsing from machine discovery defects. Category/location/status filters enhance that list. Only present verified taxonomy values; include an appropriate Proposed/design-study option if approved source records require it, rather than forcing a proposed retreat into Completed/In progress. Every preview carries scope, media type, location/status where verified and a working destination. Mobile selections and scroll position survive detail-page return. Apply consistently rounded cards and balanced media frames.

Sea Esta Villas

Route: /projects/sea-esta-villas-mount-lavinia
Page title: Sea Esta Villas, Mount Lavinia | Excello

Introduction

Headline: A neighbourhood by the sea.
Body: Sea Esta is a gated villa development in Mount Lavinia. The homes are arranged as a community, with private spaces of their own and connections to the coastal setting.

The brief

Heading: A home of your own, within a community.
Body: The project brings individual villas together without losing the sense of privacy that makes a home comfortable. Visual connections between the buildings help the development feel like a neighbourhood rather than a collection of separate plots.

The place

Heading: Living close to the coast.
Body: The Mount Lavinia setting is central to the project. Gardens, rooftop terraces and views towards the Indian Ocean give the homes a relationship with the place around them.

The homes

Heading: Different layouts. The same care for daily life.
Body: The brochure describes five villa types. Living, dining and pantry spaces form the main shared areas of each home, with gardens and rooftop terraces extending the places to spend time.
Parking and service areas are considered alongside the living spaces. The documented layouts include wet kitchens and staff accommodation, keeping practical needs within the overall plan.

Light and privacy

Heading: Open where it helps. Private where it matters.

Body: The shared living areas are planned to open towards the gardens. The more private rooms use filtered light and ventilation to create spaces for rest.
The same attention carries through the choice of materials and the way the buildings sit alongside one another.

Project facts

Location: Mount Lavinia, Sri Lanka.
Project type: Gated villa development.
Design detail: Five villa typologies described in the source brochure.
Stage: Confirm against the current project record before publishing.

Gallery

Heading: Explore Sea Esta.
Caption approach: Identify the villa type or space shown. Distinguish photographs from renders.

Next step

Heading: Have a residential development in mind?
Body: Tell us about the land and what you would like it to become.
Button: Discuss your land
Destination: /contact
Footer: Shared enquiry footer.

Sources and review notes

Adapted from the Sea Esta brochure and archived project page.
Brochure:
https://docs.google.com/document/d/17G3aj_d_IDte-oZbOYEM2O5y7BS3xkuz/edit?usp=drivesdk&ouid=117645275753459485918&rtpof=true&sd=true
Archive:
https://drive.google.com/file/d/1Bk_EQBcFIOWEWQdebWLpOHKgdMIr6guv/view?usp=drivesdk
Source conflict: The brochure describes 15 villas, while the archived website and original website copy describe 16. The public copy above omits the count pending confirmation.
Historical investment prices, returns, exchange rates and hospitality statistics were not carried into this page.

Page design and generation prompt

Generate only the Sea Esta Villas page at /projects/sea-esta-villas-mount-lavinia in the existing Excello Sites project. Read this page's original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Introduction → The brief → The place → The homes → Light and privacy → Project facts → Gallery → Next step.

Reuse the shared project-detail template but use this project's own imagery and narrative.
Introduction: a 16:9 P-SEA-01 approved establishing image below the project title/intro; keep title and location on a solid surface above, not over the façade. Use a 4:5 mobile crop or image-contained treatment if cropping would hide architecture. Display verified render/proposed status near the image.
The brief: short narrative column. The place: actual site/coastal context, without an unverified direct sea view. The homes: approved living/interior image. Light and privacy: actual openings, garden or terrace view. Project facts: restrained definition list. Gallery: verified exterior/interior/detail/plan images. Next step: contextual enquiry.
Sequence image-led and text-led sections without placing every paragraph in a card. Gallery mixes 3:2 establishing views and 4:5 details; captions stay below images. A keyboard-accessible enlarged viewer may show source images; preserve close/back controls and focus.
Asset set P-SEA-01 to -06 is described in Image Register. Use only available approved views; do not invent all six. R01/R03 for warmth and inhabited terrace framing; maintain the actual villa design.
Any source-based render prompt must preserve actual geometry, roofline, openings, camera and material boundaries. Add no floors, balconies, facilities or site features. Missing proof stays an identified draft gap.
Keep source/review notes out of the public page. Shared footer and appropriate related-project links only from the source.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Separate mobile experience: use the Mobile UX tab for its own composition, menu, filter sheets, unit summaries and enquiry flow. Share approved content and canonical routes with desktop. Use 44–48 px touch areas, readable image crops and visible focus. Motion follows the restrained Motion and Performance tab; no forced desktop scaling, pinned film or heavy scroll sequence. Keep Back to top and WhatsApp clear of the contextual action and keyboard.

Finish by checking exact copy, public/internal-note separation, links, independently designed desktop and mobile crops, contrast, keyboard behaviour and genuine form/data outcomes. List unresolved assets or connections. Follow the Motion and Performance tab. No Three.js story or frame sequence is required.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF pages 7 and 13: retain this project’s established route and recovered copy. The shared facts record includes title, place, typology, verified status/date and exact Excello scope. Explain brief/site decisions and documented outcome using approved photographs, captioned drawings and labelled renders. Unresolved count/status or authorship remains review-pending. Add a related service/insight link and similar-project enquiry. Source/review notes remain internal. In-progress work uses a real dated update; proposed concepts must not appear as completed work.

Aathavan Apartments

Route: /projects/aathavan-dehiwala-apartment
Page title: Aathavan Apartments, Dehiwala | Excello

Introduction

Headline: Aathavan by Excello.
Body: Forty-four residences at No. 6 Carron Place, Dehiwala. Two- and three-bedroom apartments planned around the needs of everyday living.
Buttons: Explore the floor plans | View available apartments

The address

Heading: A residential street, with the city within reach.
Body: Carron Place sits within an established Dehiwala neighbourhood. The project brings apartment living into that setting, with the building and its shared spaces planned as one development.

The apartments

Heading: Choose the space that fits your life.
Body: The brochure includes two-bedroom, three-bedroom and three-bedroom layouts with a maid’s room. Living and dining areas connect the home, while bedrooms, kitchens and balconies have clearly defined places in the plan.
The choice begins with how much space you need and how you expect to use it.

Floor-plan options

Type 1: Three bedrooms; 1,185 sq.ft.
Type 2: Three bedrooms and maid’s room; 1,390 sq.ft.
Type 3: Two bedrooms; 1,065 sq.ft.
Type 4: Two bedrooms; 1,045 sq.ft.
Type 5: Three bedrooms and maid’s room; 1,370 sq.ft.
Type 6: Three bedrooms; 1,260 sq.ft.
Type 7: Three bedrooms; 1,210 sq.ft.
Production note: These are the published brochure options. Use the latest approved plans to confirm areas and specifications before publication.

Shared spaces

Heading: Space for the everyday things outside your apartment.
Body: The brochure plans include a rooftop walking path, residents’ gym, and yoga and meditation space. These give residents places to exercise or take a break without leaving the building.

Building services

Heading: The practical parts are planned too.
Body: Solar generation, resident parking, lifts, EV charging and access control are part of the documented project brief.
CCTV coverage and on-site security are also described in the brochure. Confirm the final specification with the project team.

Project facts

Location: No. 6 Carron Place, Dehiwala, Sri Lanka.
Project type: Residential apartment development.
Residences: 44.
Apartment options: Two and three bedrooms, including selected layouts with a maid’s room.
Images: Artist’s impressions unless identified as site photographs.

Availability and enquiry

Heading: Which apartment would work for you?
Body: View the current options or ask the team about a floor plan, orientation or payment arrangement.
Buttons: View available apartments | Ask about Aathavan
Destinations: /aathavan-availability | /contact
Note: Current price, availability and final project details must be confirmed with the team.
Footer: Shared enquiry footer.

Sources and review notes

Adapted from AATHAVAN_BY_EXCELLO_Reduced.pdf.
Source:
https://drive.google.com/file/d/1gYnPHMVKp6ggycu5tSOF0kIZFzUjG0ig/view?usp=drivesdk
The source describes proposed facilities. The copy does not present them as already operating. No completion date, fixed price, energy-saving guarantee or capital appreciation forecast has been added.

Page design and generation prompt

Generate only the Aathavan Apartments page at /projects/aathavan-dehiwala-apartment in the existing Excello Sites project. Read this page's original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Introduction → The address → The apartments → Floor-plan options → Shared spaces → Building services → Project facts → Availability and enquiry.

Reuse the shared project-detail template but use this project's own imagery and narrative. Introduction: a 16:9 P-AAT-01 approved establishing image below the project title/intro; keep title and location on a solid surface above, not over the façade. Use a 4:5 mobile crop or image-contained treatment if cropping would hide architecture. Display verified render/proposed status near the image.
The address: genuine street/site context. The apartments: approved unit interior. Floor-plan options: exact approved plans with legible enlargement controls. Shared spaces: images only of documented design features. Building services: readable text, no invented equipment diagrams. Project facts: definition list. Availability and enquiry: clear link to /aathavan-availability and unit enquiry.
Sequence image-led and text-led sections without placing every paragraph in a card. Gallery mixes 3:2 establishing views and 4:5 details; captions stay below images. A keyboard-accessible enlarged viewer may show source images; preserve close/back controls and focus.
Asset set P-AAT-01 to -06 is described in Image Register. Use only available approved views; do not invent all six. R04 guides scale and residential context only. Preserve Aathavan's approved façade and massing.
Any source-based render prompt must preserve actual geometry, roofline, openings, camera and material boundaries. Add no floors, balconies, facilities or site features. Missing proof stays an identified draft gap.
Keep source/review notes out of the public page. Shared footer and appropriate related-project links only from the source.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Separate mobile experience: use the Mobile UX tab for its own composition, menu, filter sheets, unit summaries and enquiry flow. Share approved content and canonical routes with desktop. Use 44–48 px touch areas, readable image crops and visible focus. Motion follows the

restrained Motion and Performance tab; no forced desktop scaling, pinned film or heavy scroll sequence. Keep Back to top and WhatsApp clear of the contextual action and keyboard.

Finish by checking exact copy, public/internal-note separation, links, independently designed desktop and mobile crops, contrast, keyboard behaviour and genuine form/data outcomes. List unresolved assets or connections. Follow the Motion and Performance tab. No Three.js story or frame sequence is required.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF pages 7 and 13: retain this project’s established route and recovered copy. The shared facts record includes title, place, typology, verified status/date and exact Excello scope. Explain brief/site decisions and documented outcome using approved photographs, captioned drawings and labelled renders. Unresolved count/status or authorship remains review-pending. Add a related service/insight link and similar-project enquiry. Source/review notes remain internal. In-progress work uses a real dated update; proposed concepts must not appear as completed work. Keep architecture/project evidence distinct from the buying decision. Link availability, approved plans/brochure and buyer questions using current sales records; do not add unsupported appreciation, scarcity or completion claims.

Panimozhi Club House

Route: /projects/panimozhi-club-house
Page title: Panimozhi Club House, Kalkudah | Excello

Introduction

Headline: A place to slow down by the coast.
Body: Panimozhi Club House is a hospitality project in Kalkudah, with 15 rooms and a close connection to the beach.

The brief

Heading: A comfortable base for a coastal stay.
Body: The brief brings contemporary accommodation into a setting where the sea and the surrounding area are part of the visit. Guests can spend time by the ocean or use the club house as a starting point for exploring nearby places.

The setting

Heading: Let the coast be part of the experience.
Body: The proximity to the beach is central to the project. Sea breeze, the sound of the waves and easy access to the shore give the place a character of its own.

The rooms

Heading: Simple spaces for a relaxed stay.
Body: Fifteen modern rooms form the accommodation described in the archived project copy. The design supports a comfortable visit while keeping the coastal setting in view.

Project facts

Location: Kalkudah, Sri Lanka.
Project type: Hospitality and accommodation.
Documented room count: 15.
Stage and precise professional scope: Confirm against the current project record.

Gallery

Heading: Explore the project.
Caption approach: Describe the room, shared area or coastal view shown. Clearly identify renders.

Next step

Heading: Planning a place for guests?
Body: Tell us about the location and the experience you want to create.
Button: Discuss your hospitality project
Destination: /contact
Footer: Shared enquiry footer.

Sources and review notes

Adapted from the archived Panimozhi project page, recovered by OCR.
Source:
https://drive.google.com/file/d/1Jr5KcNDVepmVgqRvUUgyNOcmjgnROISF/view?usp=drivesdk
Archived marketing language has been simplified. No unsupported operating status, occupancy result or project-delivery outcome has been added.

Page design and generation prompt

Generate only the Panimozhi Club House page at /projects/panimozhi-club-house in the existing Excello Sites project. Bambalapitiya Residence

Route: /projects/bambalapitiya-residence
Page title: Bambalapitiya Residence, Colombo | Excello

Introduction

Headline: Make a compact city plot work for daily life.
Body: Bambalapitiya Residence uses a simple arrangement of living spaces, private rooms and service areas to make the most of an urban site.

The brief

Heading: Keep the plan clear.
Body: The documented design places the main living, dining and kitchen spaces together on the ground floor. Private rooms sit on the upper levels, giving the home a clear distinction between shared and quieter spaces.

Light and ventilation

Heading: Bring the outside into the plan.
Body: Vertical glazing and the brick façade are important parts of the design. The archived description connects them with daylight and ventilation within the house.

The service areas

Heading: Give the practical things their own place.
Body: An enclosed service block brings essential utilities together. This helps the main living areas stay uncluttered and makes the practical parts of the house part of the design from the beginning.

The rooftop

Heading: Room to spend time outdoors.
Body: An open-air rooftop terrace extends the places to relax and gather. On a compact urban plot, that outdoor space forms part of how the home is used.

Project facts

Location: Bambalapitiya, Colombo, Sri Lanka.
Project type: Urban residence.
Documented features: Brick façade, vertical glazing, enclosed service block and rooftop terrace.

Gallery

Heading: Explore the home.
Caption approach: Identify the living spaces, façade and terrace shown.

Next step

Heading: Have a compact plot of your own?
Body: Tell us what you need the home to do and share any site information you have.
Button: Discuss your home
Destination: /contact
Footer: Shared enquiry footer.

Sources and review notes

Archive:
https://drive.google.com/file/d/1H8aMCXG-et-RN67KekVeAbsXZGUxVvt3/view?usp=drivesdk
Original website copy:
https://drive.google.com/file/d/1NSZp8--SNOvdO9FB6NM2U5HlgviDFeMa/view?usp=drivesdk
Source conflict: The archived page describes three floors; the original website document describes four. The public copy uses “upper levels” and omits a numerical floor count.
No unmeasured energy-efficiency claim is included.

Page design and generation prompt

Generate only the Bambalapitiya Residence page at /projects/bambalapitiya-residence in the existing Excello Sites project. Read this page’s original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Introduction → The brief → Light and ventilation → The service areas → The rooftop → Project facts → Gallery → Next step.

Reuse the shared project-detail template but use this project’s own imagery and narrative.
Introduction: a 16:9 P-BAM-01 approved establishing image below the project title/intro; keep title and location on a solid surface above, not over the façade. Use a 4:5 mobile crop or image-contained treatment if cropping would hide architecture. Display verified render/proposed status near the image.
The brief: compact-site narrative. Light and ventilation: actual glazing/interior images. The service areas: readable explanation with real supporting detail if available. The rooftop: verified terrace image. Project facts: definition list without resolving disputed floor counts through invented images. Gallery: actual brick façade, interior and detail photographs. Next step: home enquiry.
Sequence image-led and text-led sections without placing every paragraph in a card. Gallery mixes 3:2 establishing views and 4:5 details; captions stay below images. A keyboard-accessible enlarged viewer may show source images; preserve close/back controls and focus.
Asset set P-BAM-01 to -06 is described in Image Register. Use only available approved views; do not invent all six. R01/R11 guide framed views; retain the real brick façade and vertical glazing.
Any source-based render prompt must preserve actual geometry, roofline, openings, camera and material boundaries. Add no floors, balconies, facilities or site features. Missing proof stays an identified draft gap.

Keep source/review notes out of the public page. Shared footer and appropriate related-project links only from the source.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Separate mobile experience: use the Mobile UX tab for its own composition, menu, filter sheets, unit summaries and enquiry flow. Share approved content and canonical routes with desktop. Use 44–48 px touch areas, readable image crops and visible focus. Motion follows the restrained Motion and Performance tab; no forced desktop scaling, pinned film or heavy scroll sequence. Keep Back to top and WhatsApp clear of the contextual action and keyboard.

Finish by checking exact copy, public/internal-note separation, links, independently designed desktop and mobile crops, contrast, keyboard behaviour and genuine form/data outcomes. List unresolved assets or connections. Follow the Motion and Performance tab. No Three.js story or frame sequence is required.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF pages 7 and 13: retain this project’s established route and recovered copy. The shared facts record includes title, place, typology, verified status/date and exact Excello scope. Explain brief/site decisions and documented outcome using approved photographs, captioned drawings and labelled renders. Unresolved count/status or authorship remains review-pending. Add a related service/insight link and similar-project enquiry. Source/review notes remain internal. In-progress work uses a real dated update; proposed concepts must not appear as completed work.

Café Kaapi

Route: /projects/cafe-kaapi
Page title: Café Kaapi | Interiors, Construction and Branding | Excello

Introduction

Headline: From a café idea to a place to meet.
Body: Café Kaapi brought construction, interior design, branding and content creation into one project.

The brief

Heading: Make the space feel like the business.
Body: The work began with the client’s vision and the experience they wanted to offer. The interior and the way the café presented itself needed to belong to the same idea.

The interior

Heading: A place to spend time.
Body: The archived project copy describes an inviting café interior where customers can meet friends and enjoy a game of pool.
Seating, atmosphere and the activities within the space help shape how people use it.

Identity and presentation

Heading: Carry the idea beyond the walls.
Body: Branding and content creation formed part of the documented scope alongside construction and interior design. The project shows how a physical space and its public identity can be developed together.

Excello’s role

Construction.
Interior design.
Branding.

Content creation.
Production note: These services are explicitly identified in the archived project description.

Gallery

Heading: See the space and its identity.
Caption approach: Distinguish interior photographs, brand materials and content examples.
Include only actual project assets.

Next step

Heading: Planning a café, shop or commercial space?
Body: Tell us about the business and the place you want to create.
Button: Talk through your project
Destination: /contact
Footer: Shared enquiry footer.

Sources and review notes

No sales uplift, customer count, award or performance result was found in the source, so none is claimed.

Page design and generation prompt

Generate only the Café Kaapi page at /projects/cafe-kaapi in the existing Excello Sites project. Read this page's original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Introduction → The brief → The interior → Identity and presentation → Excello's role → Gallery → Next step.

Reuse the shared project-detail template but use this project's own imagery and narrative. Introduction: a 16:9 P-KAA-01 approved establishing image below the project title/intro; keep title and location on a solid surface above, not over the façade. Use a 4:5 mobile crop or image-contained treatment if cropping would hide architecture. Display verified render/proposed status near the image.
The brief: everyday café-use narrative. The interior: genuine seating/social-space images. Identity and presentation: actual signage and approved brand collateral. Excello's role: open scope list, not campaign-performance claims. Gallery: actual interior, details and identity. Next step: contextual café/branding enquiry.
Sequence image-led and text-led sections without placing every paragraph in a card. Gallery mixes 3:2 establishing views and 4:5 details; captions stay below images. A keyboard-accessible enlarged viewer may show source images; preserve close/back controls and focus.
Asset set P-KAA-01 to -06 is described in Image Register. Use only available approved views; do not invent all six. R09/R10 guide tactile interior and social atmosphere. Never generate replacement signage or unreadable brand typography.
Any source-based render prompt must preserve actual geometry, roofline, openings, camera and material boundaries. Add no floors, balconies, facilities or site features. Missing proof stays an identified draft gap.
Keep source/review notes out of the public page. Shared footer and appropriate related-project links only from the source.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Separate mobile experience: use the Mobile UX tab for its own composition, menu, filter sheets, unit summaries and enquiry flow. Share approved content and canonical routes with desktop. Use 44–48 px touch areas, readable image crops and visible focus. Motion follows the restrained Motion and Performance tab; no forced desktop scaling, pinned film or heavy scroll sequence. Keep Back to top and WhatsApp clear of the contextual action and keyboard.

Finish by checking exact copy, public/internal-note separation, links, independently designed desktop and mobile crops, contrast, keyboard behaviour and genuine form/data outcomes. List unresolved assets or connections. Follow the Motion and Performance tab. No Three.js story or frame sequence is required.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF pages 7 and 13: retain this project’s established route and recovered copy. The shared facts record includes title, place, typology, verified status/date and exact Excello scope. Explain brief/site decisions and documented outcome using approved photographs, captioned drawings and labelled renders. Unresolved count/status or authorship remains review-pending. Add a related service/insight link and similar-project enquiry. Source/review notes remain internal. In-progress work uses a real dated update; proposed concepts must not appear as completed work.

Rudra Wellness Retreat

Route: /projects/rudra-wellness-retreat-kalkudah
Page title: Rudra Wellness Retreat, Kalkudah | Excello

Introduction

Headline: A retreat planned around body, mind and community.
Body: Rudra Wellness Retreat is a proposed 25-acre development in Kalkudah, combining villa accommodation, a holiday retreat, wellness spaces and community initiatives.

The vision

Heading: More than a place to stay.
Body: The brochure brings several ways of using the site together: short visits, longer stays, wellness activities and villa ownership.
The landscape and shared spaces form part of the experience, alongside accommodation.

Places to stay

Heading: Different needs, within one setting.
Body: The documented concept includes one-, two- and three-bedroom villas, holiday accommodation, a hostel and a retirement sanctuary.
These are presented as parts of the development plan. Final availability and the delivery of each element require confirmation with the project team.

Wellness and everyday life

Heading: Places to move, rest and spend time.
Body: Yoga, spa facilities, a vegetarian restaurant, gardens and outdoor spaces form part of the brochure’s planned programme.
The intent is to connect accommodation with activities and services across the retreat.

Community

Heading: Give the wider community a place in the project.
Body: The project material describes education, support for women entrepreneurs and small businesses, and planting initiatives through the associated community programme.
These are ambitions described in the source, rather than verified results of completed programmes.

Development planning

Heading: Build the picture in stages.
Body: The brochure sets out a phased approach to landscape, infrastructure, buildings and interiors.
Current scope, dates and progress should be discussed with the project team before making a decision.

Project facts

Location: Kalkudah, Eastern Province, Sri Lanka.
Site area described in the brochure: 25 acres.
Project type: Proposed wellness and hospitality development.
Status: Concept and planned programme described here; current implementation requires confirmation.

Next step

Heading: Want to understand the project in more detail?
Body: Ask the team for the current project information and the options available.
Button: Ask about Rudra
Destination: /contact
Footer: Shared enquiry footer.

Sources and review notes

Brochure:
https://drive.google.com/file/d/1P03DrfKUYm25km02YNonxwxNXZ1MrnOw/view?usp=drivesdk
Archive:
https://drive.google.com/file/d/1AMEwpYccJoB0Zc3fiVPIY_hl2E1q7Ggj/view?usp=drivesdk
The brochure contains both 48-villa and 44-villa references. Villa count is omitted pending confirmation.
Historical milestones, guaranteed returns, zero-electricity-cost language, health-benefit promises and tree-planting targets were not carried into this copy.

Page design and generation prompt

Generate only the Rudra Wellness Retreat page at /projects/rudra-wellness-retreat-kalkudah in the existing Excello Sites project. Read this page's original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Introduction → The vision → Places to stay → Wellness and everyday life → Community → Development planning → Project facts → Next step.

Reuse the shared project-detail template but use this project's own imagery and narrative. Introduction: a 16:9 P-RUD-01 approved establishing image below the project title/intro; keep title and location on a solid surface above, not over the façade. Use a 4:5 mobile crop or image-contained treatment if cropping would hide architecture. Display verified render/proposed status near the image.
The vision: proposed masterplan narrative. Places to stay: approved villa renders. Wellness and everyday life: documented planned wellness/landscape imagery. Community: actual approved design proposal images. Development planning: approved masterplan with enlargement, no speculative map boundaries. Project facts: verified definition list. Next step: hospitality/development enquiry.
Sequence image-led and text-led sections without placing every paragraph in a card. Gallery mixes 3:2 establishing views and 4:5 details; captions stay below images. A keyboard-accessible enlarged viewer may show source images; preserve close/back controls and focus.
Asset set P-RUD-01 to -06 is described in Image Register. Use only available approved views; do not invent all six. R05/R10/R13 guide landscape/viewpoint atmosphere. Keep proposed status explicit; no claims of completed villas or invented unit counts.

Any source-based render prompt must preserve actual geometry, roofline, openings, camera and material boundaries. Add no floors, balconies, facilities or site features. Missing proof stays an identified draft gap.
Keep source/review notes out of the public page. Shared footer and appropriate related-project links only from the source.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Separate mobile experience: use the Mobile UX tab for its own composition, menu, filter sheets, unit summaries and enquiry flow. Share approved content and canonical routes with desktop. Use 44–48 px touch areas, readable image crops and visible focus. Motion follows the restrained Motion and Performance tab; no forced desktop scaling, pinned film or heavy scroll sequence. Keep Back to top and WhatsApp clear of the contextual action and keyboard.

Finish by checking exact copy, public/internal-note separation, links, independently designed desktop and mobile crops, contrast, keyboard behaviour and genuine form/data outcomes. List unresolved assets or connections. Follow the Motion and Performance tab. No Three.js story or frame sequence is required.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF pages 7 and 13: retain this project’s established route and recovered copy. The shared facts record includes title, place, typology, verified status/date and exact Excello scope. Explain brief/site decisions and documented outcome using approved photographs, captioned drawings and labelled renders. Unresolved count/status or authorship remains review-pending. Add a related service/insight link and similar-project enquiry. Source/review notes remain internal. In-progress work uses a real dated update; proposed concepts must not appear as completed work.

Insights

Route: /insights
Page title: Building, Design and Property Insights | Excello

Introduction

Headline: A few things worth knowing before you build.
Body: Straightforward advice on planning, design, budgets and the choices that come up along the way.

Article filter

Topics: All; Planning a home; Costs & construction; Development; Project news.
Action: Clear filters
Empty state: There are no articles in this selection yet. View all insights.

Article previews

Making a small plot work for you
Start with the way you want to live, then make the space work harder.
Link: Read the article

What goes into a construction budget?
A useful first estimate, and the costs you need to look at more closely.

Link: Read the article

Introducing the Aathavan project
A look at the apartment development in Dehiwala.
Link: Read the project update
Production note: “Introducing” here is ordinary article text, not a decorative pill badge.

Client experiences

Heading: What was it like to work together?
Body: The drawings tell part of the story. The people involved can tell you about the experience.
Production note: Insert only approved client quotes with project and attribution. Hide this block until authentic quotes are available. Do not create sample praise.

Next step

Heading: Have a question about your own project?
Body: Tell us what you’re trying to work out.
Button: Ask our team
Footer: Shared enquiry footer.

Page design and generation prompt

Generate only the Insights page at /insights in the existing Excello Sites project. Read this page’s original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Introduction → Article filter → Article previews → Client experiences → Next step.

Introduction: text-led editorial title, no generic hero photograph.
Article filter: use only the document-approved categories; clear selected/reset states and mobile wrapping.
Article previews: one prominent latest/featured entry only if editorial status is confirmed, followed by a calm two-column grid. Use B01–B06 as 3:2 covers; titles/excerpts and verified metadata remain below, outside images. No invented dates, authors or read-time claims.
Client experiences: integrate genuine approved quotes with related project imagery in the same page. If no approved quote exists, omit the visible block and record the gap.

Next step: direct invitation to discuss a project, then shared footer.
Cover generation follows each B prompt: desk decisions, compact courtyard, samples over drawings, modest room, actual Aathavan exterior, coordinated drawing review. Do not reuse the same cover for all articles.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Separate mobile experience: use the Mobile UX tab for its own composition, menu, filter sheets, unit summaries and enquiry flow. Share approved content and canonical routes with desktop. Use 44–48 px touch areas, readable image crops and visible focus. Motion follows the restrained Motion and Performance tab; no forced desktop scaling, pinned film or heavy scroll sequence. Keep Back to top and WhatsApp clear of the contextual action and keyboard.

Finish by checking exact copy, public/internal-note separation, links, independently designed desktop and mobile crops, contrast, keyboard behaviour and genuine form/data outcomes. List unresolved assets or connections. Follow the Motion and Performance tab. No Three.js story or frame sequence is required.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF pages 13 and 18–19: answer real client questions, use original project decisions and retain distinct topic roles. Article cards use verified titles/metadata and contextual links. Keep editorial review dates meaningful; do not fabricate author/date/read time. Review overlapping guides before adding new thin articles. Use approved experiences only and preserve the combined Home treatment.

Building through market uncertainty

Route: /insights/building-through-market-uncertainty
Page title: Planning a Building Project Through Changing Costs | Excello

Introduction

Headline: Keep the decisions clear when costs change.
Body: A building budget is easier to manage when you know what it includes, which decisions are still open and how changes will be agreed.
Prices, materials and delivery dates can move during a project. The useful response is to keep the brief, drawings and cost information connected.

Start with what matters most

Before choosing finishes, agree the spaces and functions the project needs. Decide which items are essential and which could be adjusted or added later.
A clear brief gives the team a basis for reviewing options if the estimate changes. Without it, reductions can become a series of small decisions that no longer serve the same project.

Review cost as the design develops

An early estimate is based on information available at the time. As the layout, structure, services and specifications become clearer, the cost plan should be reviewed.
Ask what has changed between estimates. It might be floor area, foundation requirements, material choices or items that were not included before.
Understanding the reason helps you make a useful change to the design.

Compare the same work

A cheaper quote may cover fewer items. Compare scope, quantities, specifications and exclusions before comparing the totals.
Professional appointments, approval costs, utility connections, external drainage, boundary walls and loose furnishings may sit outside a building quotation.
Ask which costs still need to be budgeted separately.

Make selections before they affect site work

Lighting, plumbing, air-conditioning, security and data systems need to be coordinated with the building.
Changing these after work has started can mean opening up finished surfaces or doing work twice. Ask the team which decisions are due next and keep a record of the agreed selections.

Leave room for unexpected work

Ground conditions, scope changes and market movement can affect a project. Agree a contingency appropriate to the site and the information available.
Also agree how changes will be described, priced and approved. A proposed change should be understandable before it becomes part of the work.

Take the next step

Bring the current drawings, budget and questions to the conversation.
Button: Discuss your project budget

Sources and copy status

Expanded editorial copy based on the cost-planning guidance in Blogs and the Excello Content Knowledge Hub. The exact original article under this URL was not recovered from Drive or previous chats.
Blogs:
https://docs.google.com/document/d/1Jh6RYjM3oO_EvhENHM5ZFENZuMsKYPK78TGglkXBrAU/edit?usp=drivesdk
Knowledge hub:
https://docs.google.com/document/d/1Tdsxzsw9tMS3XlK9nH_rynSBF397UfW3Z9K0LZraG1c/edit?usp=drivesdk
This is a source-based rewrite, not a recovered original or current market forecast.

Page design and generation prompt

Generate only the Article - Market Uncertainty page at /insights/building-through-market-uncertainty in the existing Excello Sites project. Read this

page's original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Introduction → Start with what matters most → Review cost as the design develops → Compare the same work → Make selections before they affect site work → Leave room for unexpected work → Take the next step.

Use the shared article template. Render the approved article title and introduction on a solid surface above its B01 cover. No text overlay on the cover.
Cover: clean 3:2 asset, Plans, small massing model and material samples in side window light; careful decisions, no currency or panic imagery. Use the corresponding Image Generation Prompts brief; covers are illustrative unless actual project imagery is used.
Keep every public article section from the source in its original order and preserve heading levels, lists, examples, disclaimers and links. Do not publish the "Sources and copy status" or "Sources and publication notes" working notes as article body.
Layout: comfortable approximately 65–75-character text measure. Desktop can use a small sticky contents rail when the article length warrants it; mobile use a collapsible contents list. Do not create a sidebar for an article too short to benefit.
Place a real site/context image after the first priority discussion and an actual planning/material detail near comparing work or selecting materials. Keep cost review, contingency and next-step sections mostly text.
Use at most two meaningful supporting images rather than filling every subsection with photography. Captions below; article figures with exact data remain editable tables/diagrams.
End with its contextual enquiry/calculator/project action, related approved articles and shared footer. No invented author portrait, publication date, reading time, quote or statistics. Mobile keeps title, intro, cover and body in normal reading order.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Separate mobile experience: use the Mobile UX tab for its own composition, menu, filter sheets, unit summaries and enquiry flow. Share approved content and canonical routes with desktop. Use 44–48 px touch areas, readable image crops and visible focus. Motion follows the restrained Motion and Performance tab; no forced desktop scaling, pinned film or heavy scroll sequence. Keep Back to top and WhatsApp clear of the contextual action and keyboard.

Finish by checking exact copy, public/internal-note separation, links, independently designed desktop and mobile crops, contrast, keyboard behaviour and genuine form/data outcomes. List

unresolved assets or connections. Follow the Motion and Performance tab. No Three.js story or frame sequence is required.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF pages 13 and 18–19: retain the existing route and recovered/drafted article copy status. Lead with its practical answer, use genuine author/technical reviewer when relevant, approved publication/review dates and sources. Include a relevant case study and contextual service/tool/enquiry link. Generated covers stay illustrative; factual figures are editable tables/diagrams derived from reviewed data. Do not claim historical cost, price or availability data is current. Review overlaps rather than generate thin duplicate pages.

Making a small plot work for you

Route: /insights/small-land-house-design-sri-lanka
Page title: Planning a Home on a Small Plot in Sri Lanka | Excello

Introduction

Headline: Start with the life you want to fit into the home.
Body: A compact plot makes the arrangement of space important. The aim is to create rooms that work together, with enough light, privacy and room for daily use.

Write a useful brief

Think about how you live now and what may change. Where do people gather? Where do you need a quieter room? What needs storage? Which activities can comfortably share a space? This helps turn a room list into a plan that reflects the way the house will be used.

Look at the whole site

Access, orientation, neighbours and planning requirements affect what can fit. Consider them before treating an early sketch as a fixed design.
A layout that works on one plot may need substantial changes on another.

Give light and air a place

The Bambalapitiya Residence archive describes vertical glazing and a brick façade as part of the daylight and ventilation strategy.
The lesson is to consider openings and the surrounding context within the plan. Window size alone does not resolve privacy, shade or the position of neighbouring buildings.

Keep movement straightforward

Stairs, passages and service areas are part of the floor area you are building. Their arrangement affects how much useful space is left and how easily the rooms connect.
In the Bambalapitiya project, shared living spaces sit together, with private rooms on upper levels and an enclosed service block.

The arrangement responds to that project. Your home needs its own response to the brief and site.

Think about outdoor space

A garden, courtyard or terrace can add another place to spend time. The right choice depends on the site, access and how you will use it.
The rooftop terrace at Bambalapitiya forms part of the documented living arrangement on a compact urban plot.

Bring the budget into the plan

Adding floors also adds structure, stairs, services and construction work. Compare the options with their costs and planning requirements.
Make sure a future extension is assessed properly before relying on it in your budget.

Start with your land

Share the location, dimensions and any survey you have. We can help you explore the options.
Button: Tell us about your home
Related links: Homes | Bambalapitiya Residence | Cost calculator

Sources and copy status

Adapted from the Bambalapitiya archive and the construction-cost article in Blogs. The exact original small-plot article was not recovered.
Project archive:
https://drive.google.com/file/d/1H8aMCXG-et-RN67KekVeAbsXZGUxVvt3/view?usp=drivesdk
Blogs:
https://docs.google.com/document/d/1Jh6RYjM3oO_EvhENHM5ZFENZuMsKYPK78TGglkXBrAU/edit?usp=drivesdk
The conflicting floor count is deliberately omitted.

Page design and generation prompt

Generate only the Article - Small Plot page at /insights/small-land-house-design-sri-lanka in the existing Excello Sites project. Read this page's original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Introduction → Write a useful brief → Look at the whole site → Give light and air a place → Keep movement straightforward → Think about outdoor space → Bring the budget into the plan → Start with your land.

Use the shared article template. Render the approved article title and introduction on a solid surface above its B02 cover. No text overlay on the cover.
Cover: clean 3:2 asset, Compact urban home/courtyard with shade, framed greenery and modest scale, R02/R11 mood; no mansion. Use the corresponding Image Generation Prompts brief; covers are illustrative unless actual project imagery is used.
Keep every public article section from the source in its original order and preserve heading levels, lists, examples, disclaimers and links. Do not publish the "Sources and copy status" or "Sources and publication notes" working notes as article body.
Layout: comfortable approximately 65–75-character text measure. Desktop can use a small sticky contents rail when the article length warrants it; mobile use a collapsible contents list. Do not create a sidebar for an article too short to benefit.
Place threshold/courtyard detail beside light and air discussion. Use an actual approved plan beside movement/site discussion only when available; never invent dimensions.
Use at most two meaningful supporting images rather than filling every subsection with photography. Captions below; article figures with exact data remain editable tables/diagrams.
End with its contextual enquiry/calculator/project action, related approved articles and shared footer. No invented author portrait, publication date, reading time, quote or statistics. Mobile keeps title, intro, cover and body in normal reading order.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Do not claim historical cost, price or availability data is current. Review overlaps rather than generate thin duplicate pages.

Construction Cost per Square Foot in Sri Lanka: 2026 Guide and Calculator

Understanding the construction cost per square foot in Sri Lanka is a useful starting point when planning a house. However, it is not a final quotation.
The same-sized house can have very different costs depending on its location, soil conditions, number of floors, design, structure, finishes, fittings and level of professional involvement.
Use our construction cost calculator to create an initial planning estimate, then use the guidance below to understand what affects the result and how to make better decisions before construction begins.

Use the Construction Cost Calculator

[INSERT CONSTRUCTION COST CALCULATOR HERE]
The calculator provides an early budgeting estimate based on the information you enter. It is designed to help you understand the likely scale of your project before requesting drawings, quotations or a detailed Bill of Quantities.
To use it:
Enter your estimated floor area.
Select the number of floors or storeys.
Choose the appropriate construction or finish level.
Enter the requested project information.
Review the estimated construction range.
Download or save the estimate for your initial planning.
Speak with Excello if you need a project-specific review.
The result should be treated as a planning guide. It is not a fixed quotation, BOQ, contract price or guarantee of the final construction cost.

How Much Does Construction Cost per Square Foot in Sri Lanka?

There is no single construction rate that applies to every house in Sri Lanka.
A basic home with a simple plan, economical finishes and straightforward site conditions will cost less than a multi-storey home with premium finishes, complex structural requirements, custom joinery, large areas of glass or extensive external works.
Construction rates are commonly discussed in broad finish categories:
Basic: Functional planning, economical materials, standard fittings and simple finishes.
Standard: Better-quality tiles, sanitaryware, doors, windows, electrical fittings and kitchen finishes.

Premium: Higher-grade materials, custom details, upgraded fittings, improved lighting and more refined finishes.
Luxury: Bespoke design, imported or specialist materials, custom joinery, advanced systems and high levels of detailing.
These categories are useful for early planning, but the actual rate depends on what is included in the scope.
The most reliable way to understand the real cost is to prepare a coordinated design, confirm the specifications and develop an itemised Bill of Quantities.

Why the Square-Foot Rate Can Be Misleading

A square-foot rate is a useful comparison tool, but it hides many important details.
Two houses may both measure 2,000 square feet, but one may contain:
A simple rectangular plan;
Standard windows and doors;
One kitchen and two bathrooms;
A simple roof;
Easy access for materials and workers.
The other may contain:
Multiple floors;
Large glazed openings;
Several bathrooms;
A custom kitchen;
Complex roof forms;
Retaining walls;
Difficult ground conditions;
Imported fittings;
Extensive external works.
Although the floor areas are the same, the construction cost may be very different.
This is why a low advertised rate should always be examined carefully. Ask what the rate includes, what it excludes and what level of finish it represents.

What Is Usually Included?

Depending on the contractor and scope, a construction rate may include some or all of the following:
Site preparation;
Foundations;
Concrete and reinforcement;
Columns, beams and slabs;
Brickwork or blockwork;
Plastering;
Roofing;

Waterproofing;
Floor and wall finishes;
Doors and windows;
Plumbing;
Electrical installation;
Sanitary fittings;
Painting;
Kitchen or pantry work;
External works.
However, many items are sometimes excluded or treated separately. These may include:
Land cost;
Surveying;
Soil investigation;
Architect and consultant fees;
Structural engineering;
Local authority approvals;
Utility connections;
Boundary walls;
Gates;
Driveways;
Retaining walls;
Landscaping;
External drainage;
Solar systems;
Air-conditioning;
Loose furniture;
Curtains and appliances;
Additional site security;
Temporary works;
Price changes during construction.
Always compare quotations using the same scope. A cheaper rate may simply exclude more items.

The Main Factors That Affect Construction Cost

1. Floor area

The total floor area is one of the first figures used for budgeting. Larger homes generally require more materials, labour, finishes, electrical points, plumbing fixtures and construction time. However, the relationship is not always linear. A small house with premium finishes and complex details may cost more per square foot than a larger, simpler house.

2. Number of floors

A two-storey or multi-storey house usually requires additional structural work, stairs, slabs, stronger foundations, vertical services and more complex access arrangements.
The shape and structural system of the building can also affect the final rate.

3. Location

Construction costs vary between Colombo, the Western Province and other parts of Sri Lanka.
Location can affect:
Labour availability;
Transport distances;
Material delivery costs;
Site access;
Storage space;
Local authority requirements;
Availability of skilled workers;
Ground conditions.
A narrow road, steep site or restricted access may increase the cost even when the house itself is relatively simple.

4. Soil and site conditions

The soil must be understood before finalising the foundation system.
Additional costs may arise from:
Weak or filled ground;
High groundwater;
Rock excavation;
Sloping land;
Retaining structures;
Deep foundations;
Extensive filling;
Difficult excavation;
Limited access for machinery.
A soil investigation and proper structural design can prevent costly changes during construction.

5. Design complexity

Simple forms are generally easier to build, measure and coordinate.
Costs may increase with:
Multiple corners;
Cantilevered elements;
Large spans;
Curved walls;

Double-height spaces;
Complex roof forms;
Large areas of glass;
Custom staircases;
Decorative façade details;
Built-in furniture;
Bespoke joinery.
Good design is not about removing every interesting feature. It is about deciding where complexity adds real value and where it creates unnecessary cost.

6. Materials and finishes

Finishes have a major influence on the final budget.
Common cost differences occur in:
Floor tiles;
Bathroom fittings;
Kitchen cabinets;
Countertops;
Doors;
Windows;
Glass;
Paint;
Lighting;
Wardrobes;
Hardware;
External paving;
Sanitaryware.
The smartest approach is not always choosing the cheapest material. It is selecting the right specification for each location and use.
Spend carefully on areas that affect durability, safety, waterproofing and daily use. Be more selective with decorative features that can be upgraded later.

7. Services and systems

Electrical, plumbing, drainage, water supply, hot water, ventilation, security, data, solar and air-conditioning systems all affect the total cost.
These systems should be planned early. Adding them after construction has started often creates unnecessary demolition, rework and additional expense.

How to Make Smart Construction Choices

Design for the site

A good plan responds to the shape, orientation, access, climate and surroundings of the land. This can reduce unnecessary excavation, improve natural ventilation and make the building more comfortable without relying only on expensive equipment.

Keep the structure efficient

A compact and well-coordinated plan usually makes better use of materials and reduces complicated construction.
This does not mean every home should look the same. It means the structure, rooms, services and circulation should work together.

Prioritise the building envelope

Waterproofing, roof design, windows, external walls and drainage protect the building from weather and moisture.
These are not areas where poor decisions should be made simply to reduce the initial budget.

Choose finishes by use

A durable finish in a high-use area may provide better value than an expensive decorative product.
Consider:
Maintenance;
Availability;
Replacement cost;
Cleaning;
Durability;
Warranty;
Suitability for Sri Lanka’s climate.

Plan services before construction

Electrical points, plumbing lines, drainage, lighting, internet, security and air-conditioning should be coordinated with the architectural and structural drawings.
Late changes are often more expensive than making the right decision during design.

Keep a contingency

Every construction project should include a reasonable contingency for unforeseen conditions, design changes, market movement and necessary additional work.
The amount depends on the project, but the important principle is simple: do not plan your budget so tightly that one unexpected issue stops the work.

Compare complete quotations

Do not compare only the final total.
Compare:
Scope;
Specifications;
Quantities;
Exclusions;
Payment terms;
Programme;
Supervision;
Quality control;
Consultant involvement;
Variation procedure;
Handover requirements.
A quotation with a higher total may provide better clarity and fewer unexpected costs.

Example: How to Think About a Construction Budget

Assume you are planning a 1,500-square-foot home.
The first calculation may be:
Total floor area × estimated construction rate
However, this is only the starting point.
You must then consider whether the estimate includes:
Design and consultant fees;
Approval costs;
Foundation requirements;
Boundary walls;
External drainage;
Kitchen and wardrobes;
Landscaping;
Utility connections;
Solar systems;
Appliances;
Contingency.

The calculator helps you establish an initial range. A coordinated design and BOQ help you understand the actual project cost.

Construction Cost Calculator: What the Result Means

The calculator is intended to help you:
Set an initial budget;
Compare different finish levels;
Understand the effect of floor area;
Discuss realistic options with your family;
Decide whether to build in stages;
Prepare for a design consultation;
Start a conversation with a contractor or consultant.
It should not be used as:
A final quotation;
A fixed construction price;
A replacement for a BOQ;
A structural estimate;
A legal or financial guarantee;
A promise that the project can be completed within the calculated amount.
Your final budget should be confirmed after reviewing the site, drawings, specifications, construction method and project scope.

When Should You Speak with a Professional?

You should seek professional guidance before committing to land, drawings or a construction contract.
A design and construction consultation can help you:
Review whether your budget is realistic;
Study the site and planning constraints;
Decide the appropriate project size;
Develop a practical brief;
Compare construction routes;
Identify expensive design decisions early;
Coordinate architecture, structure and services;
Prepare a clearer cost plan;
Reduce avoidable changes during construction.
At Excello, we can support selected stages of a project or coordinate the wider journey from early planning through design, construction and handover.

Frequently Asked Questions

What is the average construction cost per square foot in Sri Lanka?
There is no universal rate. Construction cost depends on finish level, location, design, number of floors, soil conditions, services and what is included in the scope. Use the calculator for an initial planning range rather than relying on one advertised rate.
How accurate is the construction cost calculator?
The calculator provides an early estimate based on the information entered and the assumptions built into the tool. It is useful for planning, but the final cost requires a site review, coordinated drawings, specifications and a detailed BOQ.
Does the calculator include land cost?
No. Construction estimates generally refer to the building work and selected project inputs. Land, legal costs, financing, professional fees, approvals, external works and loose items may need to be budgeted separately.
Does the estimate include furniture and appliances?
Unless specifically stated, furniture, curtains, appliances and decorative items should be treated as separate costs.
Can I reduce the cost of building my house?
Yes, through early planning, efficient design, appropriate material selection, proper coordination, value engineering and avoiding unnecessary changes during construction. Cost reduction should not compromise structural safety, waterproofing, electrical safety or essential building performance.
Is a square-foot rate enough to compare contractors?
No. Compare the complete scope, specifications, exclusions, payment terms, programme, quality controls and variation process. Two contractors may quote different rates because they are including different things.
Why does my final cost differ from the calculator?
The final cost may change because of site conditions, design development, material selections, changes in scope, authority requirements, consultant input, market conditions or items not included in the initial estimate.

Plan Before You Build

A construction budget becomes more useful when it is connected to a clear brief, a realistic design and a coordinated scope of work.
Use the calculator to understand the starting point. Then speak with Excello about the site, the project, the budget and the decisions that matter most.
Start with a clearer plan before you commit to construction.

Before publication, check the described calculator controls, download/save actions and inclusions against the maintained tool. No numerical rate has been invented or updated. [INSERT CONSTRUCTION COST CALCULATOR HERE] is the source's implementation marker, not visitor-facing copy.

Page design and generation prompt

Generate only the Article - Construction Cost page at /insights/construction-cost-per-square-foot-sri-lanka in the existing Excello Sites project. Read this page's original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Use the Construction Cost Calculator → How Much Does Construction Cost per Square Foot in Sri Lanka? → Why the Square-Foot Rate Can Be Misleading → What Is Usually Included? → The Main Factors That Affect Construction Cost → 1. Floor area → 2. Number of floors → 3. Location → 4. Soil and site conditions → 5. Design complexity → 6. Materials and finishes → 7. Services and systems → How to Make Smart Construction Choices → Design for the site → Keep the structure efficient → Prioritise the building envelope → Choose finishes by use → Plan services before construction → Keep a contingency → Compare complete quotations → Example: How to Think About a Construction

Budget → Construction Cost Calculator: What the Result Means → When Should You Speak with a Professional? → Frequently Asked Questions → Plan Before You Build → Disclaimer.

Use the shared article template. Render the approved article title and introduction on a solid surface above its B03 cover. No text overlay on the cover.
Cover: clean 3:2 asset, Hands comparing timber/stone samples over drawings, natural light, no fabricated estimates or prices. Use the corresponding Image Generation Prompts brief; covers are illustrative unless actual project imagery is used.
Keep every public article section from the source in its original order and preserve heading levels, lists, examples, disclaimers and links. Do not publish the “Sources and copy status” or “Sources and publication notes” working notes as article body.
Layout: comfortable approximately 65–75-character text measure. Desktop can use a small sticky contents rail when the article length warrants it; mobile use a collapsible contents list. Do not create a sidebar for an article too short to benefit.
Build an in-page contents list for the long article. Keep its factor and FAQ hierarchy intact. Use a genuine workmanship photo after the cost factors. Any comparison/example table must use exact verified copy data and remain HTML, not generated imagery. Keep calculator links prominent and caveats beside numerical examples.
Use at most two meaningful supporting images rather than filling every subsection with photography. Captions below; article figures with exact data remain editable tables/diagrams. End with its contextual enquiry/calculator/project action, related approved articles and shared footer. No invented author portrait, publication date, reading time, quote or statistics. Mobile keeps title, intro, cover and body in normal reading order.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Separate mobile experience: use the Mobile UX tab for its own composition, menu, filter sheets, unit summaries and enquiry flow. Share approved content and canonical routes with desktop. Use 44–48 px touch areas, readable image crops and visible focus. Motion follows the restrained Motion and Performance tab; no forced desktop scaling, pinned film or heavy scroll sequence. Keep Back to top and WhatsApp clear of the contextual action and keyboard.

Finish by checking exact copy, public/internal-note separation, links, independently designed desktop and mobile crops, contrast, keyboard behaviour and genuine form/data outcomes. List unresolved assets or connections. Follow the Motion and Performance tab. No Three.js story or frame sequence is required.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF pages 13 and 18–19: retain the existing route and recovered/drafted article copy status. Lead with its practical answer, use genuine author/technical reviewer when relevant, approved publication/review dates and sources. Include a relevant case study and contextual service/tool/enquiry link. Generated covers stay illustrative; factual figures are editable tables/diagrams derived from reviewed data. Do not claim historical cost, price or availability data is current. Review overlaps rather than generate thin duplicate pages.

Making your budget count

Route: /insights/luxury-living-creating-a-high-end-look-on-a-budget
Page title: Thoughtful Home Design Within a Budget | Excello

Introduction

Headline: Spend on the things that matter to your home.
Body: A defined budget means making choices. It helps to start with the plan, the parts you will use every day and the work that protects the building.

Get the layout right first

The rooms, structure, circulation and services should work together. Reconsidering these early can be more useful than trying to find a cheaper finish for every surface.
Keep the amount of space connected to the brief. Extra area also means more structure, finishes, services and maintenance.

Know where complexity adds value

Large spans, complex roofs, extensive glazing and custom joinery can affect the construction budget.
Some of these choices may be important to the project. Discuss what each one adds and whether there is a simpler way to meet the same need.

Protect the building

The roof, waterproofing, external walls, windows and drainage help protect the home from weather and moisture.
These decisions affect what happens after you move in. Look at the suitability and detail of the work, as well as its starting price.

Choose materials around use

Ask how a finish is cleaned, maintained, repaired and replaced. Consider the availability of the product and its suitability for the location.

A durable finish in a heavily used area may be a better choice than an expensive surface selected only for appearance.

Coordinate before construction

Think about lighting, electrical points, plumbing, internet, security and air-conditioning while the drawings are being developed.
Adding them later can involve removing work already done.

Compare complete quotations

Look beyond the final total. Check the specifications, exclusions, programme, consultant involvement, quality checks and process for variations.
A comparison is useful when the same work is being priced.

Work through your priorities

Tell us where the budget needs to sit and which parts of the home matter most.
Button: Discuss your home

Aathavan by Excello

Route: /insights/aathavan-residential-project-launched
Page title: Aathavan Apartments in Dehiwala | Excello Project Introduction

Introduction

Headline: Aathavan: 44 residences at Carron Place.
Body: Aathavan by Excello brings two- and three-bedroom apartments to No. 6 Carron Place, Dehiwala.

A place for everyday living

The apartment plans bring living, dining, kitchen and private spaces into clear layouts. Seven documented unit types offer different arrangements and sizes, including selected three-bedroom options with a maid’s room.
The brochure places the project within an established Dehiwala residential neighbourhood.

Shared spaces

The documented rooftop programme includes a walking path, residents’ gym, and space for yoga and meditation.
Solar generation, resident parking, lifts, EV charging and building security are also described within the proposed project specification.

Explore the apartments

Start with the floor plan that fits your needs. The project team can explain the layouts and current options.
Button: View the Aathavan project
Destination: /projects/aathavan-dehiwala-apartment

Check the current position

Prices, available units and the project’s progress should be confirmed with the team.

Choosing a design and construction route

Route: /insights/design-build-vs-architect-contractor-sri-lanka
Page title: Design and Build or Separate Appointments? | Excello

Introduction

Headline: Who will bring the parts of your project together?
Body: You can appoint design and construction separately or discuss a coordinated design and construction route. The important part is understanding who is responsible, what is included and how decisions move from drawings to site.

Start with the stage you are at

You may have land and a rough idea, completed drawings or a project already under way. Share what has been prepared and which professionals are involved. The next appointment should respond to that starting point.

A coordinated route

The Excello source material describes design, construction and development as connected services, with specialist input brought in as the project needs it.
A coordinated appointment can bring the design, cost and delivery discussions into the same process. The written scope still needs to explain who is responsible for each part.

Separate appointments

You may appoint a designer and later select a contractor against the developed information. Decide who will coordinate consultant input, answer construction questions, review the work and handle cost changes. Those responsibilities need a clear place within the appointments.

Read the scope carefully

Check what each proposal includes: drawings, specifications, cost planning, approvals coordination, consultant appointments, site reviews and handover information.
Do not assume a task is covered because the proposal uses a broad service label.

Compare the complete price

The source construction-cost article recommends comparing specifications, quantities, exclusions, payment terms, programme, supervision, consultant involvement and the variation procedure.
This helps you see what is being offered rather than comparing two totals for different work.

Agree how changes are made

Ask how a change will be described, costed and approved. Keep a record of the decision before the work changes on site.
A clear route helps the people involved keep the same understanding.

Talk it through

Tell us what you already have and where you would like help.
Button: Discuss your project route
Related links: Services | Our process | About & Team

Sources and copy status

Adapted from the original Excello website service copy, the Content Knowledge Hub and the construction-cost article in Blogs.
Original website:
https://drive.google.com/file/d/1NSZp8--SNOvdO9FB6NM2U5HlgviDFeMa/view?usp=drivesdk
Knowledge hub:
https://docs.google.com/document/d/1Tdsxzsw9tMS3XlK9nH_rynSBF397UfW3Z9K0LZraG1c/edit?usp=drivesdk
Blogs:
https://docs.google.com/document/d/1Jh6RYjM3oO_EvhENHM5ZFENZuMsKYPK78TGglkXBrAU/edit?usp=drivesdk

The exact original comparison article was not recovered. This is a source-based rewrite, not a claim that one route always performs better.

Page design and generation prompt

Generate only the Article - Delivery Routes page at /insights/design-build-vs-architect-contractor-sri-lanka in the existing Excello Sites project. Read this page's original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Introduction → Start with the stage you are at → A coordinated route → Separate appointments → Read the scope carefully → Compare the complete price → Agree how changes are made → Talk it through.

Use the shared article template. Render the approved article title and introduction on a solid surface above its B06 cover. No text overlay on the cover.
Cover: clean 3:2 asset, Overhead drawings, pencil/ruler and restrained samples with natural side light; no fake stamps. Use the corresponding Image Generation Prompts brief; covers are illustrative unless actual project imagery is used.
Keep every public article section from the source in its original order and preserve heading levels, lists, examples, disclaimers and links. Do not publish the "Sources and copy status" or "Sources and publication notes" working notes as article body.
Layout: comfortable approximately 65–75-character text measure. Desktop can use a small sticky contents rail when the article length warrants it; mobile use a collapsible contents list. Do not create a sidebar for an article too short to benefit.
Use real coordination/site imagery near the discussion of appointments and changes. A comparison table can clarify coordinated versus separate appointments using only the article's exact claims; do not invent costs, liability terms or promised savings.
Use at most two meaningful supporting images rather than filling every subsection with photography. Captions below; article figures with exact data remain editable tables/diagrams. End with its contextual enquiry/calculator/project action, related approved articles and shared footer. No invented author portrait, publication date, reading time, quote or statistics. Mobile keeps title, intro, cover and body in normal reading order.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Separate mobile experience: use the Mobile UX tab for its own composition, menu, filter sheets, unit summaries and enquiry flow. Share approved content and canonical routes with desktop. Use 44–48 px touch areas, readable image crops and visible focus. Motion follows the restrained Motion and Performance tab; no forced desktop scaling, pinned film or heavy scroll sequence. Keep Back to top and WhatsApp clear of the contextual action and keyboard.

Finish by checking exact copy, public/internal-note separation, links, independently designed desktop and mobile crops, contrast, keyboard behaviour and genuine form/data outcomes. List unresolved assets or connections. Follow the Motion and Performance tab. No Three.js story or frame sequence is required.

Speak to us directly

Heading: Prefer a quick conversation?
Phone: +94 77 022 2000
Email: inquiry@excello.lk
WhatsApp button: Chat on WhatsApp
Address: No. 16, St. Rita’s Road, Mount Lavinia, Sri Lanka.

What happens next?

Body: We’ll review what you’ve shared and get in touch to understand the project. If a meeting or site review makes sense, we’ll discuss that with you.
Footer: Use a simple contact and legal footer without repeating the entire form on this page.

Page design and generation prompt

Generate only the Contact page at /contact in the existing Excello Sites project. Read this page’s original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Introduction → Enquiry form → Form states → Speak to us directly → What happens next?.

Introduction: simple headline and short explanation, no full-screen hero.

Enquiry form: main page focus on left; verified contact details on right. One optional genuine T01 studio/team detail may sit above the contact details without competing with the form. Text never overlays it.
Use exact source form labels/options; keep project context editable. Validate contact input sensibly when it accepts either email or WhatsApp. Show inline errors, loading and real submission outcomes. Never claim delivery without connected successful handling.
Speak to us directly: verified phone, email, address and WhatsApp destination.
What happens next?: short readable explanation from the source.
Do not add a second form in the footer; use shared contact/legal footer details only.
Mobile: introduction, form, direct-contact details, next steps, footer. Floating controls must remain clear when the keyboard opens.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Separate mobile experience: use the Mobile UX tab for its own composition, menu, filter sheets, unit summaries and enquiry flow. Share approved content and canonical routes with desktop. Use 44–48 px touch areas, readable image crops and visible focus. Motion follows the restrained Motion and Performance tab; no forced desktop scaling, pinned film or heavy scroll sequence. Keep Back to top and WhatsApp clear of the contextual action and keyboard.

Finish by checking exact copy, public/internal-note separation, links, independently designed desktop and mobile crops, contrast, keyboard behaviour and genuine form/data outcomes. List unresolved assets or connections. Follow the Motion and Performance tab. No Three.js story or frame sequence is required.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF page 15: one short intent-led form, matching preferred contact channel, optional/progressive location/notes except where a dedicated free-check flow needs location. Preserve supplied project/unit/estimate context and values after failure. Separate optional marketing consent. Confirm durable backend acceptance only; a WhatsApp draft explains review-and-Send. Scheduling and reservation confirmation require actual approved workflows. No duplicate footer form.

Page title: Construction Cost Calculator for Sri Lanka | Excello

Introduction

Headline: Get a first idea of the cost.
Body: Use the calculator to explore an indicative budget for your project. It can help you compare choices before a more detailed discussion.

Calculator

Heading: What are you planning?
Production note: Retain the existing calculator and its actual controls, selections and calculation logic. Do not replace it with invented rates.
Button: Open calculator full screen
Embed loading: Loading the calculator…
Embed failure: The calculator could not load here. Open it full screen to continue.

Understanding the result

Heading: A starting estimate, not a quotation.
Body: The result is based on your selections. Your site, design, structure, finishes, services and final scope will affect the actual cost.
Professional fees, approvals, external works and other items must be checked against the calculator's stated scope.
Production note: Display the actual data-review date and inclusions from the maintained calculator source.

Next step

Heading: Want to look at your own project more closely?
Body: Share the estimate, your land location and any drawings you have.
Button: Review my project budget
Destination: /contact
Footer: Shared enquiry footer.

Page design and generation prompt

Generate only the Cost Calculator page at /tools/construction-cost-calculator-sri-lanka in the existing Excello Sites project. Read this page's original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Introduction → Calculator → Understanding the result → Next step.

Introduction: compact text-led title, explanation and early-estimate caveat. Optional small B03 material/plan crop; do not consume the first screen with imagery.
Calculator: preserve existing verified input definitions and calculation logic. Use labelled controls, sensible units and grouped fields on an open surface. Desktop inputs and result alongside; mobile inputs then result. No invented rates or silent data assumptions.
Understanding the result: place exclusions, basis and uncertainty beside/below the estimate, not hidden in a tooltip. Distinguish unavailable inputs/data from zero.
Next step: enquiry action carries estimate context without presenting it as a quotation. Use the shared footer.
Interactions: validation, recalculate/edit, reset and clear result states. Announce updates accessibly. If source logic/rates are missing, leave a transparent draft state, not a convincing fake calculator.
No fake prices embedded in generated artwork; actual figures are editable verified data.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Separate mobile experience: use the Mobile UX tab for its own composition, menu, filter sheets, unit summaries and enquiry flow. Share approved content and canonical routes with desktop. Use 44–48 px touch areas, readable image crops and visible focus. Motion follows the restrained Motion and Performance tab; no forced desktop scaling, pinned film or heavy scroll sequence. Keep Back to top and WhatsApp clear of the contextual action and keyboard.

Finish by checking exact copy, public/internal-note separation, links, independently designed desktop and mobile crops, contrast, keyboard behaviour and genuine form/data outcomes. List unresolved assets or connections. Follow the Motion and Performance tab. No Three.js story or frame sequence is required.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF pages 15–17: results remain ungated, indicative and tied to maintained rule/rate versions. Include reviewed scope, exclusions, units, date and estimate reference, without copying historical rates into live code. Preserve inputs through failure, expose edit/reset and show unavailable data distinctly from zero. Unit-independent calculator enquiries carry the estimate context to the same enquiry authority. A chatbot uses the same validated calculation service.

Aathavan apartment availability

Route: /aathavan-availability
Page title: Available Apartments at Aathavan, Dehiwala | Excello

Introduction

Headline: Find an apartment that fits.
Body: Explore the available apartment options at Aathavan by Excello, Carron Place, Dehiwala.
Link: View the Aathavan project

Availability viewer

Heading: Compare the options.
Production note: Use the maintained unit register and existing availability viewer. Do not hard-code availability, prices or update claims from this document.
Viewer action: Open full availability list
Loading: Loading apartment availability…
Error: The list could not load here. Open the full availability viewer, or ask the team for the latest information.
Empty state: No apartments match your selection. Try another option or contact the team.

Help choosing

Heading: Have a floor plan or apartment in mind?
Body: We can talk you through the available options and arrange a project discussion.
Button: Ask about an apartment
Production note: Pass the selected unit into the enquiry when available. Do not ask again for details the visitor has already provided.

Price and availability note

Body: Please confirm the current price, availability and payment arrangements with the Aathavan team before making a decision.
Footer: Shared enquiry footer.

Page design and generation prompt

Generate only the Aathavan Availability page at /aathavan-availability in the existing Excello Sites project. Read this page's original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Introduction → Availability viewer → Help choosing → Price and availability note.

Introduction: compact approved P-AAT-01 image beside title and availability explanation. No generic replacement tower, no text overlay.
Availability viewer: preserve verified unit fields and existing viewer model. Desktop can use a readable table/list plus approved selected-unit plan. Mobile offers stacked unit summaries and an accessible detail view. Do not invent a 3D building viewer.
Use only filters supported by actual data, such as bedrooms/floor/status when present. Explain statuses with text, not colour alone. Include empty/reset, loading and unavailable-data states.
Unit plan: show the exact approved plan for the chosen unit; no generated or mismatched plan. Provide enlarge/view controls that work by keyboard.
Help choosing: enquiry retains chosen unit reference as editable context.
Price and availability note: visible verification/source-update caveat; timestamp only if provided by real data. Never invent live availability or use a pulsing live indicator.
Shared footer. Avoid making reservation/payment claims that the page cannot fulfil.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Separate mobile experience: use the Mobile UX tab for its own composition, menu, filter sheets, unit summaries and enquiry flow. Share approved content and canonical routes with desktop. Use 44–48 px touch areas, readable image crops and visible focus. Motion follows the restrained Motion and Performance tab; no forced desktop scaling, pinned film or heavy scroll sequence. Keep Back to top and WhatsApp clear of the contextual action and keyboard.

Finish by checking exact copy, public/internal-note separation, links, independently designed desktop and mobile crops, contrast, keyboard behaviour and genuine form/data outcomes. List unresolved assets or connections. Follow the Motion and Performance tab. No Three.js story or frame sequence is required.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF page 14: publish only approved inventory and price terms from the maintained sales authority. Offer bedrooms/floor/area/price filtering only when those fields are available and reviewed. Show area basis, exact plan, unit code, verification time and useful statuses. Daily verification is a proposed operational target; agree the stale threshold. Beyond it, display Availability being confirmed and direct contact instead of calling old data live. No customer identities. Enquiries can happen without an account and carry unit context. A click cannot reserve a unit; comparative unit summaries are a useful enhancement, not a new unapproved route.

Review the wording against actual data handling, cookies and the final website before publication. This transfer does not certify legal compliance.

Privacy Policy

Last Updated: []
This Privacy Policy explains how Excello Developers (Pvt) Ltd, Sri Lanka, collects, uses, stores, shares, and protects personal information through www.excello.lk, social media pages, enquiry forms, WhatsApp communications, email, telephone calls, meetings, and other business communication channels.
By using our website, submitting an enquiry, contacting us, or engaging with our services, you agree to the collection and use of personal information as described in this Privacy Policy.

1. About Excello Developers

Excello Developers (Pvt) Ltd is a Sri Lanka-based real estate, design, development, and construction-related company offering services that may include property development, apartment project marketing, architectural design coordination, construction, design-and-build services, project documentation, and related consultancy or coordination services.

2. Personal Information We May Collect

We may collect the following types of personal information, depending on how you interact with us:

2.1 Contact Information

Name;
Phone number;
WhatsApp number;
Email address;
Postal address;
Preferred method of contact.

2.2 Enquiry and Project Information

Type of enquiry or service required;
Property or land details;
Survey plans, deeds, assessment details, or other documents voluntarily shared with us;
Construction, design, renovation, or development requirements;
Expected budget;
Preferred location;
Apartment or property preferences;
Meeting notes and communication history;
Project-related decisions, requirements, approvals, and instructions.

2.3 Website and Technical Information

When you visit our website, we may automatically collect:
IP address;
Browser type and version;
Device type;
Pages visited;
Time spent on pages;
Referral sources;
Approximate location derived from technical data;
Cookie and analytics information.

2.4 Communication Information

We may collect and store information shared through:
Website forms;
WhatsApp;
Telephone calls;
Email;
Social media messages;
In-person meetings;
Online meetings;
Project coordination platforms or document-sharing channels.

3. How We Use Personal Information

Excello Developers (Pvt) Ltd may use personal information for the following purposes:
To respond to enquiries;
To arrange meetings, consultations, site visits, or call-backs;
To understand client requirements;
To prepare proposals, quotations, project documents, checklists, or service recommendations;
To provide architectural, design, construction, real estate, or development-related services;
To coordinate with internal teams, consultants, professionals, contractors, suppliers, and service providers;
To manage project documentation, approvals, submissions, and communication;
To improve our website, services, marketing, and client experience;
To send project updates, promotional information, or service-related communication, where permitted;
To comply with legal, regulatory, accounting, tax, municipal, contractual, or statutory requirements;
To protect our legal rights, business interests, website security, and operational integrity.

4. Legal and Data Protection Basis

We process personal information where it is necessary or appropriate for:
Responding to your enquiry or request;
Taking steps before entering into a contract;
Performing a contract or service agreement;
Complying with legal or regulatory obligations;
Protecting legitimate business interests;
Obtaining your consent where required;
Maintaining proper records for business, legal, accounting, project, or compliance purposes.
Excello Developers (Pvt) Ltd aims to handle personal data in line with applicable Sri Lankan laws, including the Personal Data Protection Act No. 9 of 2022, as amended by the Personal Data Protection (Amendment) Act No. 22 of 2025, and any applicable regulations, gazettes, directions, or guidance issued by the relevant authorities from time to time.

5. Data Protection Act Update

Sri Lanka has introduced a formal personal data protection framework through the Personal Data Protection Act No. 9 of 2022, with further amendments under the Personal Data Protection (Amendment) Act No. 22 of 2025.
In line with these developments, Excello Developers (Pvt) Ltd is committed to strengthening how personal information is collected, used, stored, shared, and protected. We aim to maintain fair, transparent, secure, and purpose-based processing of personal information.
Where applicable, we will take reasonable steps to:
Collect personal data only for clear and legitimate purposes;

Use personal data only for the purposes communicated to the individual;
Keep personal data accurate and updated where necessary;
Retain personal data only for as long as reasonably required;
Protect personal data using suitable administrative, technical, and organisational safeguards;
Respect applicable rights of individuals under Sri Lankan data protection law;
Review and improve internal data handling practices from time to time.

6. Sharing of Personal Information

We may share personal information only where necessary and appropriate with:
Employees and authorised representatives of Excello Developers (Pvt) Ltd;
Architects, engineers, quantity surveyors, designers, consultants, contractors, suppliers, and project professionals;
Legal advisors, accountants, auditors, tax consultants, and corporate advisors;
Government departments, municipal councils, regulatory authorities, banks, financial institutions, or statutory bodies where required;
IT service providers, hosting providers, CRM systems, cloud storage providers, communication platforms, analytics providers, and marketing service providers;
Any other party where disclosure is required by law, contract, consent, legitimate business need, or protection of legal rights.
We do not sell personal information to third parties.

7. International Data Transfers and Cloud Services

Some digital tools, cloud platforms, email systems, analytics platforms, project management systems, or communication services used by us may store or process data outside Sri Lanka. Where personal data is transferred or processed outside Sri Lanka, we will take reasonable steps to ensure that such processing is carried out with appropriate safeguards and in line with applicable legal requirements.

8. Data Security

We take reasonable measures to protect personal information against unauthorised access, loss, misuse, alteration, disclosure, or destruction.
However, no website, email, online form, cloud platform, or digital communication method can be guaranteed to be completely secure. Users share information through digital channels at their own risk.

9. Data Retention

We retain personal information only for as long as reasonably necessary for the purposes for which it was collected, including:

Responding to enquiries;
Managing client relationships;
Providing services;
Maintaining project records;
Complying with legal, accounting, tax, contractual, regulatory, or dispute-resolution requirements;
Protecting our legitimate business interests.
When personal information is no longer required, we may securely delete, anonymise, archive, or restrict access to it, where appropriate.

10. Your Rights

Subject to applicable law, you may have the right to:
Request access to personal information we hold about you;
Request correction of inaccurate or incomplete personal information;
Withdraw consent where processing is based on consent;
Object to certain forms of processing;
Request deletion or restriction of personal information, where legally applicable;
Ask questions about how your personal information is handled.
These rights may be subject to legal, contractual, regulatory, technical, or operational limitations.

11. Marketing Communications

We may contact you with information about our services, projects, offers, updates, or related content where permitted by law or where you have shown interest in our services.
You may request that we stop sending promotional communications at any time by contacting us or using any unsubscribe option provided, where applicable.
Even if you opt out of marketing communication, we may still contact you for service-related, project-related, legal, administrative, or contractual purposes.

12. Children’s Privacy

Our website and services are generally intended for adults, property owners, clients, investors, and persons seeking design, construction, or real estate-related services.
We do not knowingly collect personal information from children without appropriate consent from a parent or guardian.

13. Accuracy of Information Provided by Users

You are responsible for ensuring that any information or documents you provide to us are accurate, complete, lawful, and up to date.

Excello Developers (Pvt) Ltd shall not be responsible for delays, errors, losses, or consequences arising from incorrect, incomplete, outdated, or misleading information provided by users or clients.

14. Changes to This Privacy Policy

We may update this Privacy Policy from time to time to reflect changes in our services, legal requirements, data protection obligations, technology, or business practices.
The updated version will be posted on this page with a revised “Last Updated” date.

15. Contact

For privacy-related questions, requests, or concerns, please contact:

Page design and generation prompt

Generate only the Privacy Policy page at /privacy-policy in the existing Excello Sites project. Read this page’s original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Privacy Policy → 1. About Excello Developers → 2. Personal Information We May Collect → 2.1 Contact Information → 2.2 Enquiry and Project Information → 2.3 Website and Technical Information → 2.4 Communication Information → 3. How We Use Personal Information → 4. Legal and Data Protection Basis → 5. Data Protection Act Update → 6. Sharing of Personal Information → 7. International Data Transfers and Cloud Services → 8. Data Security → 9. Data Retention → 10. Your Rights → 11. Marketing Communications → 12. Children’s Privacy → 13. Accuracy of Information Provided by Users → 14. Changes to This Privacy Policy → 15. Contact.

Use the shared legal-page template for the privacy policy.
No hero photograph, generated cover, legal icons or decorative background.

Opening: exact policy title and verified effective/update date only when supplied; never fill a blank date with today automatically.
Body: preserve the recovered legal copy word for word, its numbered sections/subsections, contact details and existing links. Keep a readable text measure, clear headings and generous paragraph spacing. Legal numbering is substantive content and must remain even though decorative section numbering is excluded elsewhere.
Desktop may have a compact in-page contents rail; mobile use a collapsible contents list with real anchor links. Keep the main reading column dominant.
Exclude source/publication-status working notes from visitor-facing content, but keep unresolved approval/date items in build notes. Do not claim legal review has happened.
Cookie page: show the document's disclaimer as part of this page, not an invented fourth legal route. Any cookie-preference control is connected to the actual consent system only; no decorative toggle claiming consent persistence.
Footer: shared verified contact details and all three legal links, without another enquiry form. Preserve Page Up and WhatsApp clear of text.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Separate mobile experience: use the Mobile UX tab for its own composition, menu, filter sheets, unit summaries and enquiry flow. Share approved content and canonical routes with desktop. Use 44–48 px touch areas, readable image crops and visible focus. Motion follows the restrained Motion and Performance tab; no forced desktop scaling, pinned film or heavy scroll sequence. Keep Back to top and WhatsApp clear of the contextual action and keyboard.

Finish by checking exact copy, public/internal-note separation, links, independently designed desktop and mobile crops, contrast, keyboard behaviour and genuine form/data outcomes. List unresolved assets or connections. Follow the Motion and Performance tab. No Three.js story or frame sequence is required.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF pages 7, 21 and 22: preserve the recovered policy wording until reviewed against actual enquiry processing, analytics/cookies, operational vendors, retention and inventory/estimate behaviour. Publication requires the responsible owner's review and a real effective date. Functional preference controls must reflect actual persistence. This supplement is a release requirement, not legal approval or newly drafted legal advice. Keep accessible text-led layout, genuine contact/recovery links and no duplicate enquiry form.

Review the wording against actual data handling, cookies and the final website before publication. This transfer does not certify legal compliance.
The original source combines Cookie Policy and Website Disclaimer. Both are retained in this tab; no new website route is added.

Cookie Policy & Disclaimer

Last Updated: []
This Cookie Policy & Disclaimer applies to the website www.excello.lk, operated by Excello Developers (Pvt) Ltd, Sri Lanka.
By using this website, you agree to the use of cookies and similar technologies as described below, and you acknowledge the disclaimer terms stated on this page.

1. Cookie Policy

1.1 What Are Cookies?

Cookies are small text files placed on your device when you visit a website. They help the website function properly, improve user experience, understand visitor behaviour, and support communication and marketing activities.

1.2 How We Use Cookies

Excello Developers (Pvt) Ltd may use cookies and similar technologies for the following purposes:
To ensure the website functions correctly;
To remember user preferences and improve browsing experience;

To understand how visitors use our website;
To analyse website traffic, page performance, and user engagement;
To improve our project information, service pages, advertisements, and online content;
To support enquiry forms, call-back requests, WhatsApp links, and other communication tools;
To measure the performance of online campaigns and social media links.

1.3 Types of Cookies We May Use

Essential Cookies
These are required for the basic operation of the website and cannot usually be disabled through our systems.
Performance and Analytics Cookies
These help us understand how visitors interact with the website, which pages are visited, and how we can improve the website experience.
Functional Cookies
These help remember user choices such as form details, preferences, or language-related settings, where applicable.
Marketing and Advertising Cookies
These may be used to deliver relevant advertisements, measure campaign performance, and support remarketing through platforms such as Google, Meta, TikTok, or other digital advertising services.

1.4 Third-Party Cookies

Some cookies may be placed by third-party service providers such as analytics tools, advertising platforms, embedded maps, videos, social media plugins, or enquiry/communication tools. These third parties may process data according to their own privacy and cookie policies. Excello Developers (Pvt) Ltd does not control third-party cookie practices and recommends that users review the relevant third-party privacy policies where applicable.

1.5 Managing Cookies

You may manage or disable cookies through your browser settings. However, disabling certain cookies may affect the functionality, performance, or user experience of this website.
You may also manage advertising preferences directly through the relevant advertising platforms, where such options are available.

2. Website Disclaimer

2.1 General Information Only

The information provided on www.excello.lk is for general informational and promotional purposes only. While we make reasonable efforts to keep information accurate and updated, we do not guarantee that all information is complete, current, or free from errors.

2.2 Project Information

Any information relating to property developments, apartment projects, design concepts, construction services, floor plans, layouts, facilities, specifications, materials, pricing, timelines, availability, or project details is subject to change without prior notice.
Final project details shall be governed only by formal written agreements, approved drawings, statutory approvals, sale agreements, construction contracts, or other legally binding documents issued by Excello Developers (Pvt) Ltd or its authorised representatives.

2.3 Visuals, Renders, and Illustrations

Images, architectural renders, 3D visualisations, plans, mood boards, material references, lifestyle images, and illustrations shown on this website are for presentation and conceptual understanding only.
Actual site conditions, finishes, layouts, views, landscaping, furniture, lighting, colours, materials, and specifications may vary depending on design development, authority requirements, construction limitations, market availability, supplier changes, and final approved documentation.

2.4 Construction and Design Information

Any construction, architectural, structural, interior, engineering, or cost-related information provided on the website is general in nature and should not be treated as professional advice for a specific property unless provided through a formal written appointment or contract.
Users must seek proper professional advice and approvals before relying on any technical information for design, construction, renovation, purchase, or investment decisions.

2.5 No Guarantee of Availability or Pricing

Any prices, cost estimates, offers, service packages, apartment availability, project availability, or promotional information displayed on this website may change at any time.
Nothing on this website shall be considered a final quotation, binding offer, reservation, sale confirmation, or contractual commitment unless confirmed in writing by Excello Developers (Pvt) Ltd.

2.6 Third-Party Links

This website may contain links to third-party websites, social media platforms, maps, videos, payment platforms, or other external resources. These links are provided for convenience only. Excello Developers (Pvt) Ltd is not responsible for the content, accuracy, security, privacy practices, or availability of any third-party websites or services.

2.7 Limitation of Liability

To the maximum extent permitted by law, Excello Developers (Pvt) Ltd shall not be liable for any direct, indirect, incidental, consequential, or special loss or damage arising from the use of this website, reliance on website information, website errors, interruptions, third-party links, or technical issues.

2.8 Intellectual Property

All website content, including text, images, graphics, logos, project names, design concepts, renders, drawings, layouts, brand materials, and visual content, belongs to Excello Developers (Pvt) Ltd or its respective licensors, unless otherwise stated.
No content from this website may be copied, reproduced, modified, distributed, published, or used for commercial purposes without prior written permission from Excello Developers (Pvt) Ltd.

2.9 Updates to This Policy

We may update this Cookie Policy & Disclaimer from time to time. Any changes will be posted on this page with an updated “Last Updated” date.

3. Contact

For questions regarding this Cookie Policy & Disclaimer, please contact:

Terms & Conditions

Last Updated: []
These Terms & Conditions govern the use of www.excello.lk, operated by Excello Developers (Pvt) Ltd, Sri Lanka.
By accessing or using this website, submitting an enquiry, downloading information, contacting us, or engaging with our online content, you agree to these Terms & Conditions.
If you do not agree with these Terms & Conditions, please do not use this website.

1. About This Website

This website provides information about Excello Developers (Pvt) Ltd, including our company, services, projects, real estate developments, apartment-related information, design services, construction-related services, project updates, marketing materials, and other business content.
The website is intended for general information, communication, enquiry, and promotional purposes only.

2. Use of the Website

You agree to use this website only for lawful purposes.
You must not:
Use the website in any way that violates applicable laws or regulations;
Attempt to gain unauthorised access to the website, server, database, or connected systems;
Upload or transmit harmful code, malware, spam, or disruptive content;

Copy, reproduce, scrape, or misuse website content without written permission;
Submit false, misleading, offensive, unlawful, or unauthorised information;
Use the website in a way that may damage the reputation, operations, or rights of Excello Developers (Pvt) Ltd or any third party.

3. Website Information

We make reasonable efforts to ensure that the information on this website is accurate and updated. However, we do not guarantee that all website content is complete, accurate, current, or error-free.
Excello Developers (Pvt) Ltd reserves the right to update, modify, remove, or correct website content at any time without prior notice.

4. Project, Property, and Development Information

Any information relating to apartment projects, property developments, land, units, amenities, layouts, floor areas, specifications, views, pricing, availability, handover timelines, facilities, legal documentation, or construction progress is subject to change.
Such information is provided for general understanding only and shall not be treated as a final offer, legal representation, sale confirmation, reservation, investment advice, or contractual commitment.
All project-related commitments shall be governed only by formal written agreements, approved plans, sale documentation, construction contracts, reservation forms, receipts, and legally valid documents issued by Excello Developers (Pvt) Ltd or its authorised representatives.

5. Design, Construction, and Consultancy Services

Information about architectural design, structural coordination, construction, project management, cost estimates, BOQs, interior design, or design-and-build services is general in nature unless confirmed under a specific written appointment.
Any professional service, scope of work, deliverable, timeline, fee, payment schedule, consultant involvement, statutory approval, or construction responsibility must be agreed separately in writing.
No website content shall be interpreted as a professional appointment, consultancy agreement, construction contract, or design engagement unless formally confirmed by Excello Developers (Pvt) Ltd in writing.

6. Quotations, Estimates, and Pricing

Any prices, cost estimates, service fees, construction rates, apartment prices, promotional offers, or budget ranges shown or communicated through the website are indicative only unless issued as a formal written quotation or agreement.

Final pricing may vary depending on:
Site conditions;
Design changes;
Authority requirements;
Material availability;
Labour costs;
Consultant requirements;
Market fluctuations;
Client selections;
Tax, statutory, or regulatory changes;
Scope changes or additional works.
Excello Developers (Pvt) Ltd reserves the right to revise any price, estimate, quotation, or offer before formal acceptance and written confirmation.

7. Enquiries and Communication

Submitting an enquiry through this website, WhatsApp, email, phone, social media, or any other channel does not create a client relationship, reservation, sale agreement, construction agreement, or professional appointment.
A formal relationship will arise only when the relevant written agreement, proposal, quotation, appointment letter, reservation form, or contract is accepted by both parties, where applicable.
You agree that any information you submit to us is accurate, complete, lawful, and provided with proper authority.

8. Client Documents and Information

If you submit documents such as survey plans, deeds, approvals, identity information, project briefs, budgets, drawings, photographs, or property details, you confirm that you have the right and authority to share such information with us.
Excello Developers (Pvt) Ltd may rely on the information provided by you for preliminary review, consultation, quotation, design coordination, or project communication.
We are not responsible for consequences arising from inaccurate, incomplete, outdated, fraudulent, or unauthorised information provided by users or clients.

9. Intellectual Property

All content on this website, including the name Excello Developers, logos, brand materials, text, photographs, videos, graphics, renders, drawings, layouts, project names, design concepts, marketing materials, and website design, is owned by or licensed to Excello Developers (Pvt) Ltd unless otherwise stated.
You may view website content for personal and informational purposes only.

You must not copy, reproduce, distribute, publish, modify, sell, display, use, or commercially exploit any website content without prior written permission from Excello Developers (Pvt) Ltd.

10. Renders, Drawings, and Visual Material

Any architectural renders, concept images, sketches, drawings, floor plans, illustrations, material palettes, mood boards, 3D images, or visual presentations shown on this website are indicative and may differ from the final outcome.
Final design and construction may vary due to technical requirements, statutory approvals, authority comments, engineering input, material availability, site conditions, client selections, value engineering, or construction practicality.

11. Third-Party Services

In the course of our business, we may coordinate or communicate with architects, engineers, quantity surveyors, contractors, suppliers, consultants, lawyers, accountants, banks, financial institutions, government authorities, municipal councils, or other third parties.
Unless expressly stated in writing, Excello Developers (Pvt) Ltd is not responsible for the independent acts, omissions, delays, fees, representations, or obligations of third-party service providers.

12. Third-Party Links

This website may contain links to third-party websites, maps, videos, social media pages, advertisements, payment platforms, or external resources.
Such links are provided for convenience only. Excello Developers (Pvt) Ltd does not control and is not responsible for third-party websites, content, privacy policies, security, or services.

13. Data Protection and Privacy

Your use of this website and any personal information submitted to us will be handled in accordance with our Privacy Policy.
We aim to process personal information in line with applicable Sri Lankan data protection laws, including the Personal Data Protection Act No. 9 of 2022, as amended by the Personal Data Protection (Amendment) Act No. 22 of 2025, and related legal or regulatory requirements applicable from time to time.

14. Limitation of Liability

To the maximum extent permitted by law, Excello Developers (Pvt) Ltd, its directors, employees, consultants, representatives, and service providers shall not be liable for any direct, indirect, incidental, consequential, special, or economic loss arising from:
Use of or inability to use the website;
Reliance on website content;
Errors, omissions, or outdated information;
Changes to project details, pricing, or availability;
Technical issues, interruptions, viruses, or security incidents;
Third-party websites or services;
User-submitted incorrect or incomplete information;
Any matter outside our reasonable control.

15. No Warranty

This website is provided on an “as is” and “as available” basis.
We do not guarantee that the website will always be available, uninterrupted, secure, error-free, virus-free, or fully updated.

16. Indemnity

You agree to indemnify and hold harmless Excello Developers (Pvt) Ltd, its directors, employees, consultants, agents, and representatives from any claims, losses, damages, liabilities, costs, or expenses arising from your misuse of the website, breach of these Terms & Conditions, violation of law, or submission of false, unauthorised, or misleading information.

17. Changes to These Terms

Excello Developers (Pvt) Ltd may update or revise these Terms & Conditions at any time without prior notice.
The updated version will be posted on this page with a revised “Last Updated” date. Continued use of the website after changes are published means you accept the revised Terms & Conditions.

18. Governing Law and Jurisdiction

These Terms & Conditions shall be governed by and interpreted in accordance with the laws of the Democratic Socialist Republic of Sri Lanka.
Any dispute arising from or relating to this website, its content, or these Terms & Conditions shall be subject to the jurisdiction of the courts of Sri Lanka.

19. Contact

For questions regarding these Terms & Conditions, please contact:

Page design and generation prompt

Generate only the Terms & Conditions page at /terms-and-conditions in the existing Excello Sites project. Read this page's original copy above and the Visual Language & Prompt Guide, Image Direction, Image Register and Image Generation Prompts tabs. Preserve its exact approved copy, route and shared components; this prompt supplies composition, not replacement copy. Do not overwrite other pages or create /homev2.

Section order from this page: Terms & Conditions → 1. About This Website → 2. Use of the Website → 3. Website Information → 4. Project, Property, and Development Information → 5. Design, Construction, and Consultancy Services → 6. Quotations, Estimates, and Pricing → 7. Enquiries and Communication → 8. Client Documents and Information → 9. Intellectual Property → 10. Renders, Drawings, and Visual Material → 11. Third-Party Services → 12. Third-Party Links → 13. Data Protection and Privacy → 14. Limitation of Liability → 15. No Warranty → 16. Indemnity → 17. Changes to These Terms → 18. Governing Law and Jurisdiction → 19. Contact.

Use the shared legal-page template for the terms and conditions.
No hero photograph, generated cover, legal icons or decorative background.
Opening: exact policy title and verified effective/update date only when supplied; never fill a blank date with today automatically.
Body: preserve the recovered legal copy word for word, its numbered sections/subsections, contact details and existing links. Keep a readable text measure, clear headings and generous paragraph spacing. Legal numbering is substantive content and must remain even though decorative section numbering is excluded elsewhere.
Desktop may have a compact in-page contents rail; mobile use a collapsible contents list with real anchor links. Keep the main reading column dominant.
Exclude source/publication-status working notes from visitor-facing content, but keep unresolved approval/date items in build notes. Do not claim legal review has happened.

Cookie page: show the document’s disclaimer as part of this page, not an invented fourth legal route. Any cookie-preference control is connected to the actual consent system only; no decorative toggle claiming consent persistence.
Footer: shared verified contact details and all three legal links, without another enquiry form. Preserve Page Up and WhatsApp clear of text.

Visual and production rules: quiet tropical editorial imagery, natural light, tactile materials and restrained colour. Use approved tokens; use the balanced light and dark working tokens in Design and Shared Components and design.md. Generate individual clean assets with no embedded typography. Preserve named-project geometry and authentic team/client identities. Never invent missing facts or assets.

Separate mobile experience: use the Mobile UX tab for its own composition, menu, filter sheets, unit summaries and enquiry flow. Share approved content and canonical routes with desktop. Use 44–48 px touch areas, readable image crops and visible focus. Motion follows the restrained Motion and Performance tab; no forced desktop scaling, pinned film or heavy scroll sequence. Keep Back to top and WhatsApp clear of the contextual action and keyboard.

Finish by checking exact copy, public/internal-note separation, links, independently designed desktop and mobile crops, contrast, keyboard behaviour and genuine form/data outcomes. List unresolved assets or connections. Follow the Motion and Performance tab. No Three.js story or frame sequence is required.

Supplementary implementation requirements | 14 October 2026

Supplement from PDF pages 7, 21 and 22: preserve the recovered policy wording until reviewed against actual enquiry processing, analytics/cookies, operational vendors, retention and inventory/estimate behaviour. Publication requires the responsible owner’s review and a real effective date. Functional preference controls must reflect actual persistence. This supplement is a release requirement, not legal approval or newly drafted legal advice. Keep accessible text-led layout, genuine contact/recovery links and no duplicate enquiry form.

Image direction | Excello.lk

Working direction, 13 October 2026. Based on all 14 attached references. The Pinterest pin could not be inspected. This defines images for the existing sitemap; it does not change page copy, navigation or page structure.

The feeling

A place you can imagine using. Tropical homes, apartments and hospitality spaces shown through their relationship with shade, gardens, materials and everyday life. Quiet confidence comes from believable architecture and careful composition. Avoid making every scene a grand, empty mansion.

Audience and purpose

For people considering a home, land development or hospitality project in Sri Lanka. Images should help them understand what the space feels like, how it works and whether the team can deliver it. Lifestyle imagery starts a conversation; actual project images provide evidence.

Reference map

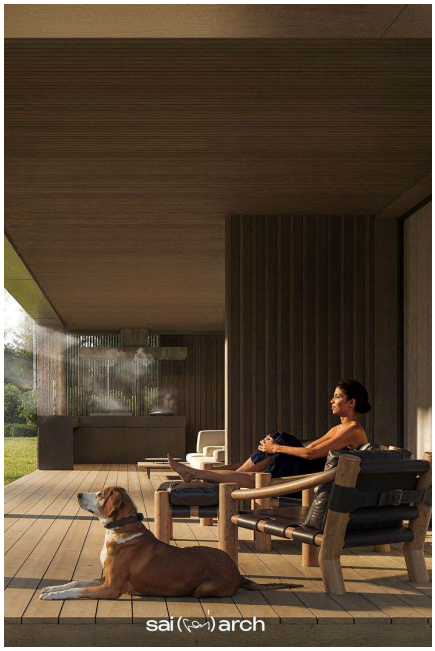

R01 · 145652: timber house exterior, projecting shade and landscape. Use for establishing-view composition.

R02 · 145653: courtyard and two walking people. Use for human scale, circulation and daylight.

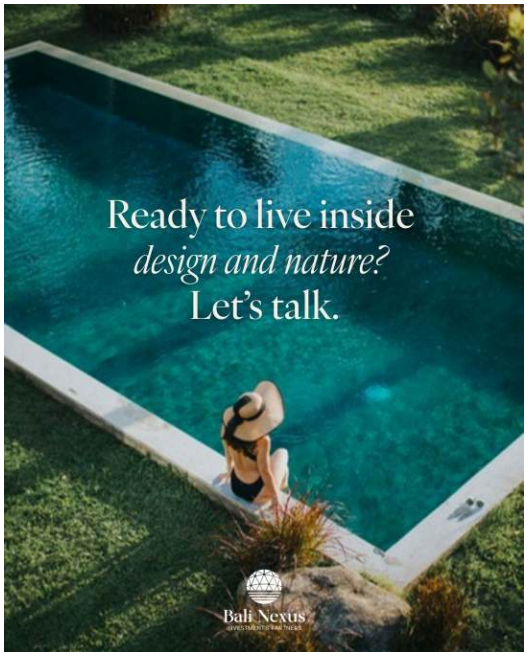

R03 · 145752: terrace, seated person and dog. Use for lived-in homes and quiet moments.

R04 · 145759: apartments behind planting, children in foreground. Use for residential life rather than isolated towers.

R05 · 145811: pool edge from above, garden shadows and a person. Use for hospitality atmosphere and aerial detail.

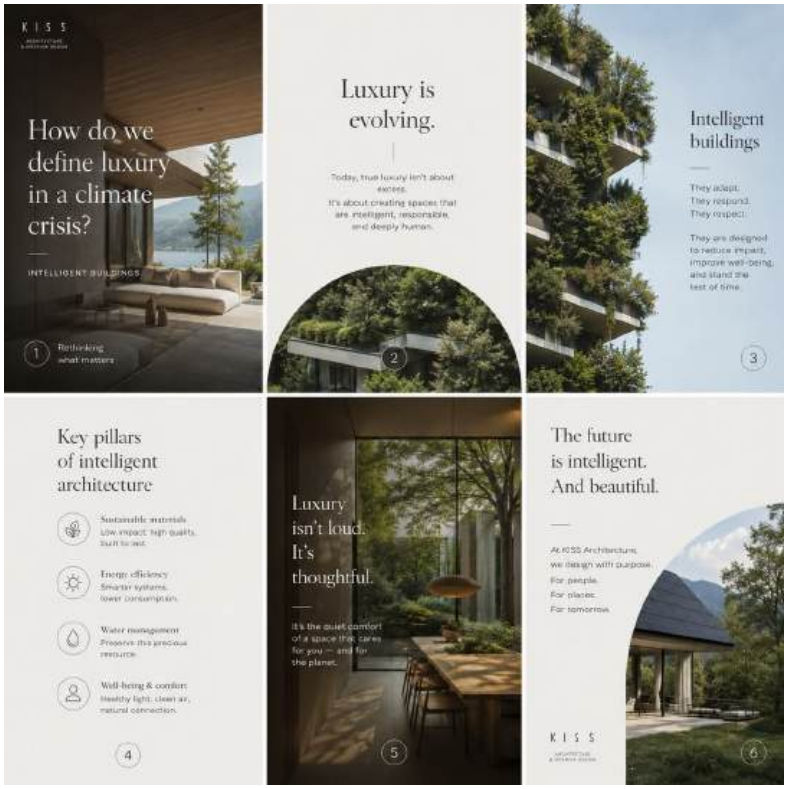

R06 · 145832: double-height living space, olive furniture and timber tables. Use for interior spatial depth.

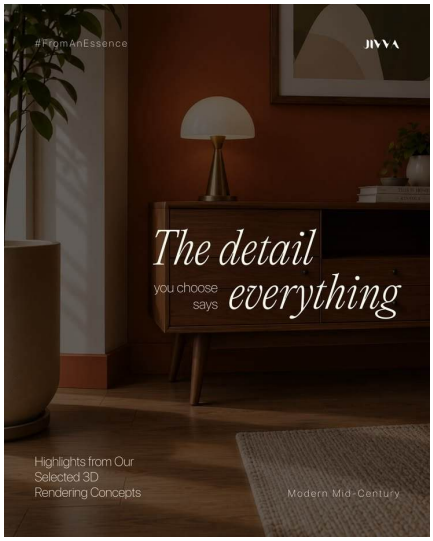

R07 · 145855: sofa, woven rug and timber detail. Use for materials and everyday objects.

R08 · 145913: architecture/nature editorial montage. Use tonal variation, not the numbered layout.

R09 · 145916: moody timber interior and lamp. Use for intimate material detail.

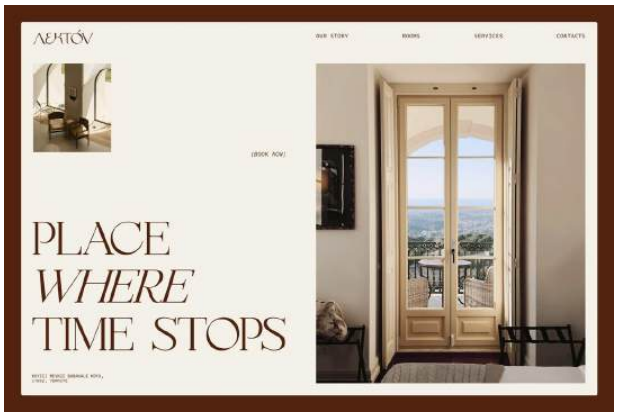

R10 · 145927: two people beside a reflective pool. Use for social space and restrained lifestyle scenes.

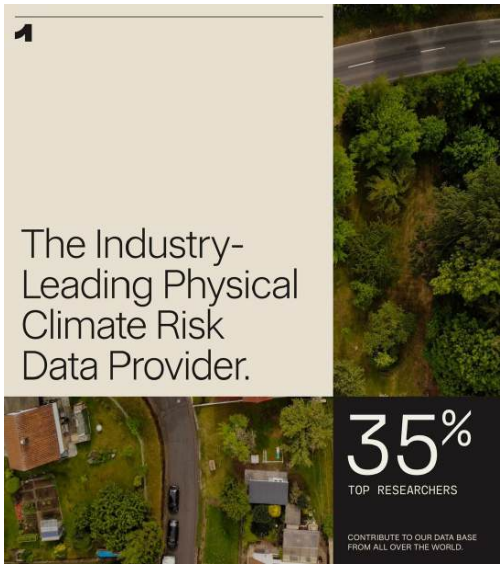

R11 · 145935: chair under an eave looking into greenery. Use framed views and quiet thresholds.

R12 · 145950: doorway framing a sea view. Use depth and composition, not the beige/italic website treatment.

R13 · 150042: aerial neighbourhood image. Use context and land narrative, not its unsupported statistic.

R14 · 150107: editorial aerial cover. Use crop and image/text balance, not its large number. The six-digit labels identify the time suffix in the uploaded filenames.

Light, materials and colour

Updated 14 October: deliberately balance light reading surfaces with dark architectural image and process moments. Contrast is checked per surface and image. Day and dusk references can coexist; a day/night image toggle is optional future work, not required for the current site.

Prefer morning or late-afternoon daylight, with believable shaded areas. Occasional overcast scenes keep the set varied. Matte timber, plaster, stone, woven fabrics and planting should retain texture. Use restrained warmth, natural greens and plausible sky/water colours. Avoid orange filters, cyan shadows, excessive saturation, polished plastic surfaces and HDR halos. These are image-colour decisions, not a new beige website theme.

Camera and composition

Use eye-level views for how a place feels; slightly elevated views for spatial relationships; aerials for land and neighbourhood context. Keep verticals straight and wide-angle distortion modest. Alternate establishing views, thresholds/interiors and close material details. Frame with planting, eaves or doorways when appropriate. Do not hide an entire building behind greenery. Leave natural negative space only where the layout needs text.

People and everyday life

Use occasional, understated people for scale: reading, talking, walking or sitting. People should belong to the scene, with natural poses and no stock-photo handshakes. Keep hero subjects clear of the text zone. Generated people must never be presented as Excello employees or clients. Team portraits and testimonial portraits require genuine, approved photographs.

What can be generated

Conceptual service imagery, general lifestyle scenes, material details and illustrative article covers may be generated. Mark them as illustrative where readers could mistake them for a named development. Named project pages, project cards and availability listings use verified photos or approved project renders. Any AI-assisted derivative must use the actual source geometry and be reviewed; a new building cannot stand in for Sea Esta, Aathavan or another named project.

Keep the reference mood, remove the graphic treatment

All production images should be clean, with no baked-in captions, logos, statistics, script text, section numbers or badges. Website headlines and article titles remain editable. Avoid the previously listed gradients, halos, frosted cards, decorative icon boxes and repetitive card layouts. Do not copy the reference photos or their designs literally.

Image family and reuse

Use one recognisable image family across the site, with varied crops and subjects. Reuse actual project covers on Home, Projects, relevant service pages and related links. Use each article cover on Home, Insights and its article page. Reuse approved team/process photography across Process and About & Team. Avoid repeating the same lifestyle hero on several adjacent pages.

Crops and delivery

Recommended masters: landscape heroes 16:9 at approximately 3000 px wide; project/gallery and article images 3:2 at approximately 2400 px wide; portrait details and team photos 4:5; square material details only where useful. These are production recommendations, not dimensions extracted from the references.

Create a separate 4:5 mobile crop for each major hero. If the subject cannot survive the crop, use a companion composition. Never stretch images. Keep focal-point coordinates with the asset record. A left-text hero reserves the left third; a right-text hero reserves the right third. Confirm the actual layout before final generation.

Deliver compressed responsive variants in supported formats such as WebP or AVIF. Keep full-resolution masters. Image titles stay outside the image. Use descriptive alt text for informative images and empty alt text for purely decorative repeats.

Review before use

Check architectural plausibility, material texture, natural shadows, people and hands, plant scale, clean verticals, desktop/mobile crops and text readability. For named projects, compare geometry and facts with the approved source. Verify image rights and photography permission. No unverified statistics, completed-project claims or return guarantees inside images or captions.

Production order

1. Select real project covers and approved staff/site photography.
2. Produce the Home concept hero and one companion mobile view.
3. Produce the four service image subjects and six article covers.
4. Complete missing section details and gallery views from approved sources.
5. Review the image family in the page layouts, then export final crop variants.
6. Keep image review within the current design stage. Complete independent desktop and mobile design and functional/performance checks before release. Three.js is not required.

Supplementary production rules | 14 October 2026

PDF pages 3, 12–13 and 24 supplement evidence handling: approved project photography and accurately labelled renders substantiate work; concepts only illustrate atmosphere. Capture permission/rights, scope attribution and review status before publishing. Frame tall façades without misleading crops; mobile art direction is independently composed. Shared rounded media frames must not hide essential architecture or captions.

Page-by-page image register

Asset IDs below refer to unique image subjects. Desktop and mobile retain the same project identity and truthful material language, while their compositions and crops are designed independently for each journey. Status: planned. No new production images have been generated in this stage.

Home

H01 · Hero: shaded contemporary tropical home opening to a garden, with one quiet everyday moment. Conceptual image, refs R01/R03/R11. 16:9 + companion 4:5. Start with the architecture on the right and open shade on the left if the approved hero uses left-aligned copy. Alternative: a strong verified Excello project photograph, if available.
H02 · Have land?: oblique neighbourhood/site-context view that shows real land potential without an invented development boundary. Real site/aerial preferred; generic conceptual context acceptable when clearly illustrative. 3:2, refs R13/R14. Reuse on Property Development.
H03 · Home proof: Bambalapitiya or Sea Esta approved cover; reuse project asset P-BAM-01 or P-SEA-01.
H04 · Apartment proof: Aathavan approved cover P-AAT-01.
H05 · Hospitality proof: Panimozhi approved cover P-PAN-01; Rudra is an alternative only with proposed/render status made clear.
H06 · Development/value section: real site study, plan and material detail; reuse S03 rather than a speculative investment graphic.
H07 · One project, one team: genuine Excello coordination or site photograph T01. Show people working on the same project.
H08 · Insights and experiences: reuse article covers B01–B06 and approved project images beside genuine quotations. No generated client portraits.
Footer/contact: no extra background image needed. Keep the form clear.

Services and Developments asset map

S01 · Architecture and Interior Design: a shaded living room opening onto a planted courtyard, tactile timber and fabric, refs R06/R07/R11. Conceptual; 3:2 with optional portrait detail.
S02 · Construction and Project Delivery: genuine site photograph with visible coordinated work, appropriate protective equipment and actual building context. 3:2. Use a conceptual image only as a labelled illustration, never as evidence of Excello delivery.
S03 · Property Development and Consultation: real site/aerial plus an actual feasibility drawing or modest desk scene with plans. Ref R13. 3:2. Do not fabricate zoning, plot boundaries, financial diagrams or approvals.
S04 · Project Branding: actual approved project identity in context, such as signage, brochure or wayfinding. Café Kaapi brand materials are a candidate if available and approved. Photograph/source artwork; no AI-invented logo or unreadable brand typography.

Homes, Apartment Development and Hospitality

Homes: hero uses P-BAM-01 or P-SEA-01; support with S01 and a real interior/detail from the same selected project. A concept lifestyle view may support the opening story but must not enter the proof gallery.
Apartment Development: hero uses P-AAT-01; support with actual façade, unit interior and shared-space/site-context images where available. R04 guides framing, not Aathavan geometry. Never invent amenities.
Hospitality: hero uses P-PAN-01 or an approved completed hospitality image; support with actual guest/social-space/detail images. A conceptual pool/terrace scene using R05/R10 may illustrate the service. Keep Rudra labelled as a proposed project.

About & Team and Process

T01 · Team at work: real photograph of Excello staff discussing an actual project. Wide 3:2; reuse Home/Process.
T02 · Team group: genuine group photograph in a relevant studio or site setting; 3:2 with space for mobile crop.
T03 · Individual portraits: consistent 4:5 photographs, natural light and plain architectural backgrounds. Names and roles must match approved copy.
PR01 · Discover: actual first-meeting conversation, if consented; otherwise a neutral detail of notes/plans without identifiable clients.
PR02 · Define: actual brief/site study or hands working on a real plan.
PR03 · Design: actual sketches, model or approved drawing, with confidential information removed.
PR04 · Coordinate: real team reviewing drawings together.
PR05 · Build: actual site progress/workmanship photo.
PR06 · Handover: actual finished detail or consented handover photograph.
Use three well-chosen images across the six steps if that keeps the page lighter. Text explains all six steps. Do not fabricate a six-photo documentary sequence.

Projects archive and filters

Use P-SEA-01, P-AAT-01, P-PAN-01, P-BAM-01, P-KAA-01 and P-RUD-01 as consistent 3:2 covers. Preserve each building’s distinctive appearance rather than forcing all covers into one camera angle. Filters reuse the same assets; no new image per filter. Project title, category and verified project status appear in editable UI. Proposed developments and renders remain visibly identified.

Shared project-detail shot structure

For each project, -01 is the cover/hero establishing view; -02 is site/context or a second exterior; -03 is the primary interior or guest/common space; -04 is circulation, terrace or another spatial relationship; -05 is a material/workmanship detail; -06 is an approved plan or explanatory drawing only when useful and available. Target up to six strong images, not six mandatory invented shots.
Hero: 16:9 master with 3:2 archive crop and 4:5 mobile variant. Gallery: mixed 3:2 and 4:5. Maintain one project’s actual geometry and material palette across the full set. Missing views are source gaps until real photographs or approved renders are supplied.

Sea Esta Villas | P-SEA

-01: strongest verified villa exterior, showing shade, façade and landscape.
-02: actual coastal/site relationship, if photographed; do not imply an unverified direct sea view.
-03: approved living/interior image.
-04: actual garden or roof-terrace view where documented.
-05: timber/façade/workmanship detail.
-06: approved villa plan if available.
Source candidates: Sea Esta brochure and archived project material. Conflicting villa counts must not become image captions. R01/R03 guide mood only.

Aathavan Apartments | P-AAT

-01: approved exterior render or photograph of the actual Carron Place building.
-02: genuine street/site context.
-03: approved unit interior.
-04: approved circulation/shared-space view if available.
-05: façade/material detail consistent with the source.
-06: correct approved unit plan.
Reuse -01 on apartment services, the launch article and availability page. Do not generate a different tower from R04 or advertise invented pools, gardens or balconies. Source candidate: Aathavan brochure; individual gallery availability needs checking.

Panimozhi Club House | P-PAN

-01: actual hospitality exterior.
-02: documented property/landscape setting.
-03: actual guest or shared interior.
-04: real social/arrival space.
-05: interior/material detail.
-06: approved plan if available.
Use archived project images first. R05/R10 can guide crop and human scale; they cannot supply nonexistent facilities.

Bambalapitiya Residence | P-BAM

-01: actual brick façade and vertical glazing.
-02: verified compact urban context.
-03: actual living interior.

-04: documented roof terrace or circulation.
-05: brick/glazing junction or other real detail.
-06: approved plan if available.
Use archived project photos. Do not infer floor count from a generated façade or resolve conflicting source descriptions through the imagery.

Café Kaapi | P-KAA

-01: genuine café interior or exterior showing the actual atmosphere.
-02: actual seating/social space.
-03: documented interior detail.
-04: actual recreation feature, if present in source images.
-05: approved signage/branding detail.
-06: real brand collateral or layout drawing where useful.
Use archived project images and original brand artwork. Generated lettering cannot replace the project identity.

Rudra Wellness Retreat | P-RUD

-01: approved masterplan/retreat render, labelled proposed or visualisation as appropriate.
-02: approved landscape/site-context view.
-03: approved villa interior or model view if available.
-04: documented planned wellness/yoga space.
-05: landscape/material detail from the approved design.
-06: approved masterplan.
Source candidates: Rudra brochure and archive. Do not present generated villas, ponds or wellness facilities as completed photography. Conflicting unit counts remain outside captions.

Insights and six article pages

Insights index uses the six article covers below. Each article uses its same cover at the top and up to two relevant supporting images, with captions where needed. Avoid adding an unrelated photograph to every paragraph.
B01 · Market Uncertainty: real or illustrative desk scene with plans, a modest building model, samples and natural window light. No money stacks, stock charts or doom imagery. Body: site/context photo + actual planning detail. 3:2; refs R07/R13.
B02 · Small Plot: approved photograph of a compact home or clearly illustrative compact courtyard/urban-home scene. Avoid a vast villa. Body: real/illustrative threshold and an approved plan; dimensions require an actual drawing. 3:2; refs R01/R02/R11.
B03 · Construction Cost: plans, timber/stone samples and hands comparing materials. No invented bills, price labels or legible fake estimates. Body: actual workmanship detail + a genuine cost-table graphic made from verified article data, if needed. 3:2; refs R07/R09.
B04 · Budget Design: one modest, beautifully resolved room with daylight, practical furniture and textured materials. Avoid chandeliers and luxury-car props. Body: close material/detail crop + shaded threshold. 3:2; refs R06/R07/R11.
B05 · Aathavan Launch: reuse approved P-AAT-01; optional actual location/approved unit-plan support. No generic apartment substitute.
B06 · Delivery Routes: overhead drawing/sample desk or an authentic coordination photograph, showing planning and delivery. Body: real site-progress image + an accurate editorial process diagram if helpful. 3:2; ref R02 for human-scale tone, not a copied building.
All article names follow their existing Doc tabs. Covers carry no embedded headlines, badges or numbers.

Contact, Tools and legal pages

Contact: optional T01 or a real studio/site detail; no large decorative image competing with the form.
Tools tab: index/planning content only unless the approved sitemap assigns it a public page. No new route inferred.
Cost Calculator: optional crop from B03; prioritise the calculator interface over a large hero image. No cost claim baked into photography.
Aathavan Availability: P-AAT-01 plus the exact approved unit plan for the selected unit. Availability and price remain editable verified data.
Privacy, Cookie Policy and Terms & Conditions: text-led pages. No hero or stock legal imagery required.

Source gaps and asset log

The brochures and archives above are source candidates identified during copy research, not a claim that all listed shots are available or approved. Before production, log filename, asset ID, exact source link/file, photographer or rights holder, photo/render/concept status, project status, permission, focal point, desktop/mobile crop, caption/alt text and where reused. Retain the existing actual project visuals when they are accurate and strong.
Example informative alt text: “Shaded terrace opening onto a planted courtyard.” Named project alt text must describe the verified image. Do not put sales copy or invented project details into alt text.

Supplementary production rules | 14 October 2026

Supplementary record fields: exact source, rights holder/permission, photo/render/concept flag, related project/article ID, approved status, factual caption/alt, desktop/mobile variants and focal point. Record unavailable assets as pending. A named development’s image, amenities and unit plan must reconcile with its approved record. Do not force all media into the same crop when it changes the evidence.

Generation prompts | production briefs

These are ready-to-use creative briefs for conceptual assets. No production image has been generated yet. Use the supplied references for mood and composition, not to clone another architect’s building. Named project images require actual approved project references.

Shared prompt ending

Photorealistic architectural editorial image. Natural material texture, plausible construction, straight verticals, restrained colour grade and believable directional shadows. No embedded text, logos, watermarks, gradient overlays or halos. Avoid distorted openings, floating objects, duplicate furniture, plastic materials, excessive styling and unnatural people. Do not depict this conceptual scene as a completed named Excello project.

H01 · Home hero

Create an original contemporary tropical home in a Sri Lankan residential setting, viewed from a shaded garden at human eye level. Deep roof shade, a simple plaster-and-timber material palette, an open living threshold and layered tropical planting. A person quietly reading on the terrace gives scale without becoming the main subject. Warm late-afternoon light, cool natural shade, believable weathering and an inhabited but uncluttered atmosphere. Use R01, R03 and R11 as mood references. Landscape 16:9, with the home on the right and calm shaded space on the left for editable website copy. Apply the shared prompt ending.
Mobile art direction: preserve the same home, materials, light and identity, but compose a separate portrait or contained architectural view for the independent mobile layout. Choose it for the mobile task, not only when the desktop crop fails. Keep editable copy on its own solid surface where needed.

S01 · Design and interiors

An original modest contemporary tropical living room opening onto a planted courtyard. Eye-level view from inside; timber furniture, matte plaster, woven rug, muted olive upholstery and one or two everyday objects. Show the relationship between interior shade and garden light. Spatial depth and natural shadows matter more than decoration. R06, R07 and R11 mood. 3:2, no people necessary. Apply the shared prompt ending.

S03 / H02 · Land and development

Conceptual editorial oblique aerial of an established Sri Lankan residential neighbourhood with mixed modest buildings, trees, shaded roads and a small open plot. Believable density and terrain, soft morning light. No boundary lines, arrows, zoning colours, development promises or invented landmark labels. R13/R14 viewpoint mood. 3:2. Use only as an illustration of land context; a named site must use its actual aerial image. Apply the shared prompt ending.

Hospitality concept · optional supporting image

An original shaded tropical hospitality terrace beside a modest reflective pool and planted courtyard. Eye-level view with two people sitting naturally and talking; timber shade, tactile pots and restrained furniture. Soft late-afternoon light, quiet social atmosphere, no resort excess. R05/R10 mood. 3:2, with a 4:5 detail crop. This supports the service narrative only, not a named project gallery. Apply the shared prompt ending.

B01 · Market uncertainty cover

An editorial still life on a practical architect’s work table: folded drawings with abstract linework, a small simple massing model, restrained material samples and a notebook. Side window light, gentle shadows, timber texture and an atmosphere of careful decision-making. No currency, graphs, panic symbolism or legible fabricated numbers. 3:2, with the objects grouped to permit a clean card crop. Apply the shared prompt ending.

B02 · Small plot cover

An original compact urban home organised around a small planted courtyard. Show how shade, a glazed threshold and a modest living space make the site feel open. Eye-level view, neighbouring context subtly visible, realistic proportions and practical construction. R02/R11 mood; no mansion scale or speculative dimensions. 3:2. Clearly illustrative until replaced by actual project photography. Apply the shared prompt ending.

B03 · Construction cost cover

Close editorial photograph of hands comparing two small timber and stone samples over architectural drawings on a work table. One pencil and a closed notebook, natural morning light, realistic material texture and simple composition. No calculator screen, legible invoices, fake

prices or decorative construction icons. R07/R09 mood. 3:2; leave room to crop the hands safely. Apply the shared prompt ending.

B04 · Budget design cover

A modest tropical sitting room made inviting through daylight, shade and well-chosen materials: simple timber chair, woven textile, matte plaster, practical side table and a framed garden view. Show calm usefulness rather than extravagant finishes. Soft side light, restrained warm/green tones. R07/R11 mood. 3:2. Apply the shared prompt ending.

B05 · Aathavan launch cover

Do not generate a generic building. Select the approved Aathavan exterior image P-AAT-01 and create a clean 3:2 editorial crop. Preserve the actual façade, openings, massing and visible context. No text baked into the image. Any source-based re-render needs the real approved reference and review against it.

B06 · Delivery routes cover

Overhead editorial composition of a real-looking drawing review: overlapping sheets with non-readable architectural linework, a pencil, a ruler and a small number of material samples. Natural window light and restrained table texture; a hand holding the corner of one sheet suggests coordinated work. No fake certifications, stamps, dates, programme claims or logos. 3:2. For factual project documentation, use the actual team photograph instead. Apply the shared prompt ending.

Material detail · reusable support

Close architectural photograph of a timber-and-plaster junction beside a shaded opening, with a woven chair edge and soft garden light beyond. Natural grain, matte surfaces, believable joints and a tactile, quiet atmosphere. R07/R09/R11 mood. 4:5 with optional square crop. Use to support material/design copy, not to claim workmanship on a named project. Apply the shared prompt ending.

Actual project derivative · conditional template

Input: approved source image of [project], exact selected view and verified project status. Preserve all visible building geometry, roofline, openings, balcony positions, material boundaries and site relationships. Keep the original camera unless a new view is supported by an actual model/drawing. Improve only agreed lighting/material realism and image quality. Maintain the source’s design, scale and landscape intent. No new facilities, floors, windows or decorative structures. Output [aspect ratio]; preserve the focal subject for a companion mobile crop. Label as an architectural visualisation where applicable. If the necessary geometry reference is missing, leave this shot pending rather than inventing it.

File naming and approval

Use stable names such as excello-h01-home-hero-desktop-v01, excello-b03-construction-cost-cover-v01 and excello-p-aat-01-exterior-approved. Record which reference and prompt version produced each concept. Review one master per subject first, then derive its crop variants. Confirm source accuracy before adding named project images to the site. Keep actual photographs, approved visualisations and conceptual illustrations identifiable in the asset register.

Supplementary production rules | 14 October 2026

Supplement rule: current master routes, independent mobile art direction, rounded media treatment and approved content remain authoritative. Generate clean separate concepts with no embedded copy. Never use generation to resolve disputed project counts, prices, legal boundaries, staff identity or completion status. Source-based project visualisations preserve geometry and documented facilities; keep render/concept labels in editable page UI.

Visual language and page prompt guide

Updated 14 October 2026. Read this with the master page copy, Desktop UX, Mobile UX and Motion and Performance.

Priority

The master's page copy and human journey remain authoritative. The 14 October consolidation, independent mobile layouts and balanced light/dark direction supersede the earlier responsive-only and all-light rules.

There are 25 active page briefs. /house4all remains a pending product. /homev2 is excluded. Tools is an organiser tab, not a route.

Generation contract

Generate one active page at a time within the existing Excello Sites project. Reuse semantic components, approved copy, routes and records. Produce desktop and mobile compositions as separate design deliverables before implementation.

Preserve the remaining project, article, legal and image tabs. Internal production notes are not public copy.

Homes belongs at /services (Homes section); apartment and hospitality content belong at /developments (Apartments section) and /developments (Hospitality section). Project Branding stays /services (Project Branding section).

Visual language

Use the light reference's open, bold reading experience and the dark image's shaded tropical architectural atmosphere. Approved working palette and typography are in Design and Shared Components.

Keep roughly 60–70% light reading and 30–40% dark emphasis as a flexible starting point. Use dark hero, process and closing moments, with light project, article and form reading. No rigid checkerboard alternation.

DM Sans is the primary proposed type family. No ornate italic-serif theme or tiny decorative numbered labels.

Asset treatment

Keep existing asset IDs and project-source rules. Real work, staff identities and client experiences need approved evidence. Concepts remain labelled.

Home desktop can use a dark architectural hero with stable readable copy. Mobile uses its separately designed solid-text and portrait-image composition when appropriate, not the same crop with smaller text.

Project pages, articles and bios place main text on solid surfaces. Captions and project status are editable below images. Do not fabricate geometry, facilities, facts, prices or personnel.

Navigation and actions

Main route definitions: Home, Projects, Services, Developments, About & Team, Insights, Contact.

Home's primary action remains Tell us about your dream.

Developments' free entry is Get a free quick land check.

Aathavan buyers use View available apartments and unit-specific enquiries.

Preserve context without repeated qualification or contact collection. Bookings, receipts and reservations must reflect actual system outcomes.

Interaction and motion

Read separate Desktop UX and Mobile UX. Mobile is a touch journey with its own menu, filtering, unit summaries and enquiry behaviour.

Use controlled short reveals and restrained optional desktop scale. Do not generate the satellite/city/hill/coast film or require Three.js. Ordinary scrolling, reduced motion and failure recovery are mandatory.

No feature, link, heading or form may depend on animation to become available.

Verification

Compare copy and route mappings with this master. Test desktop, mobile and tablet as distinct layouts. Verify keyboard, contrast, image crops, filters, gallery focus, input preservation, accepted enquiry and stale inventory handling.

Measure cold-cache mobile performance and remove effects that add jank. Content and action correctness take priority over a richer reveal.

The website has not been updated merely because this document is revised.

Supplementary production rules | 14 October 2026

Supplement integration: page-generation tools must also read Supplement Reconciliation and the relevant Enquiry & Integrations, Content & Data Model, Search & Localisation, Measurement & Governance and Release & Migration tabs. Apply the latest page-specific supplementary requirements after the existing generation prompt. These add operational states and acceptance, not a new route count or visitor-copy replacement. Every actual card uses the shared rounded-corner system, aligned group sizing and consistent gutters. Keep independently designed desktop/mobile experiences and existing master palette/typography. Do not revive the PDF’s superseded serif direction, separate duplicate services or geographical film.

Reference image gallery

The 14 supplied inspiration images are embedded below. R01–R14 correspond to Image Direction. These are mood/composition references, not approved portfolio photographs or licensed replacement website assets. Ignore their embedded promotional typography when generating clean images.

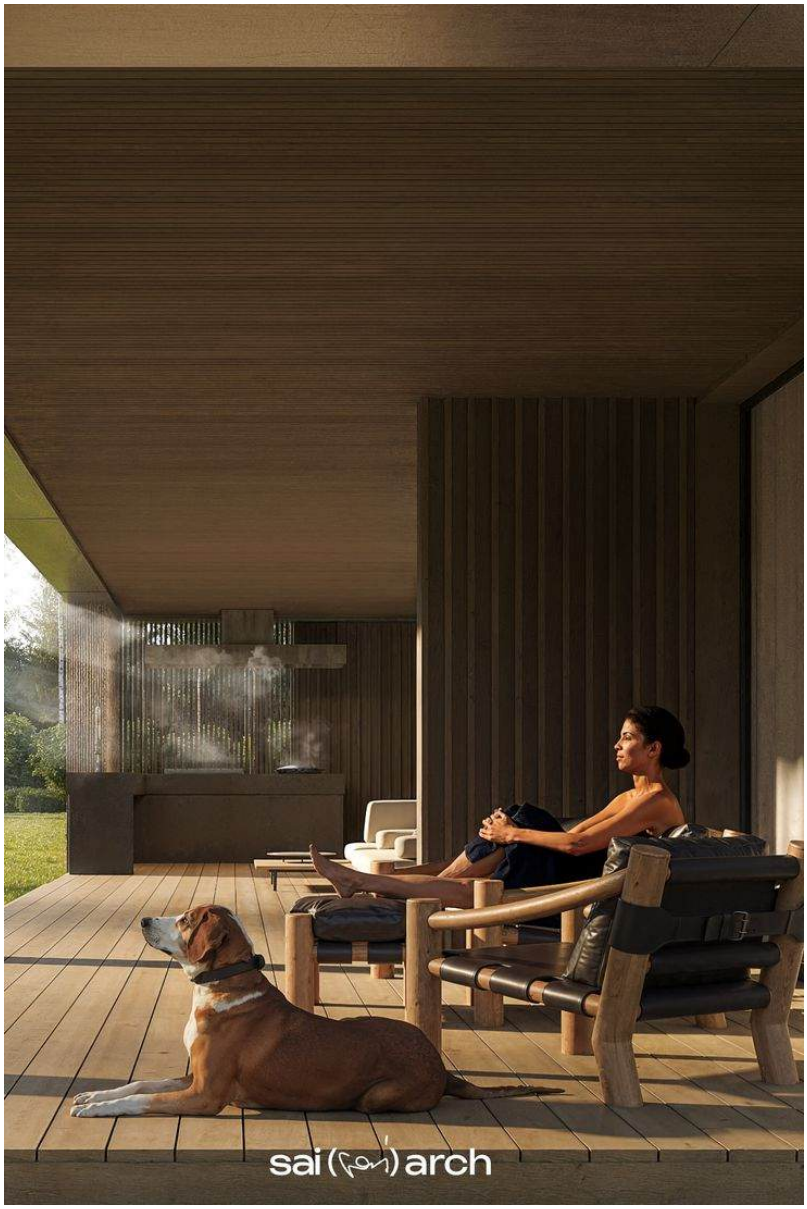

R01 · Timber home exterior: shade, landscape and eye-level framing

R02 · Courtyard: daylight, circulation and human scale

R03 · Lived-in terrace: person, dog and natural shade

R04 · Apartment context: greenery and everyday residential life

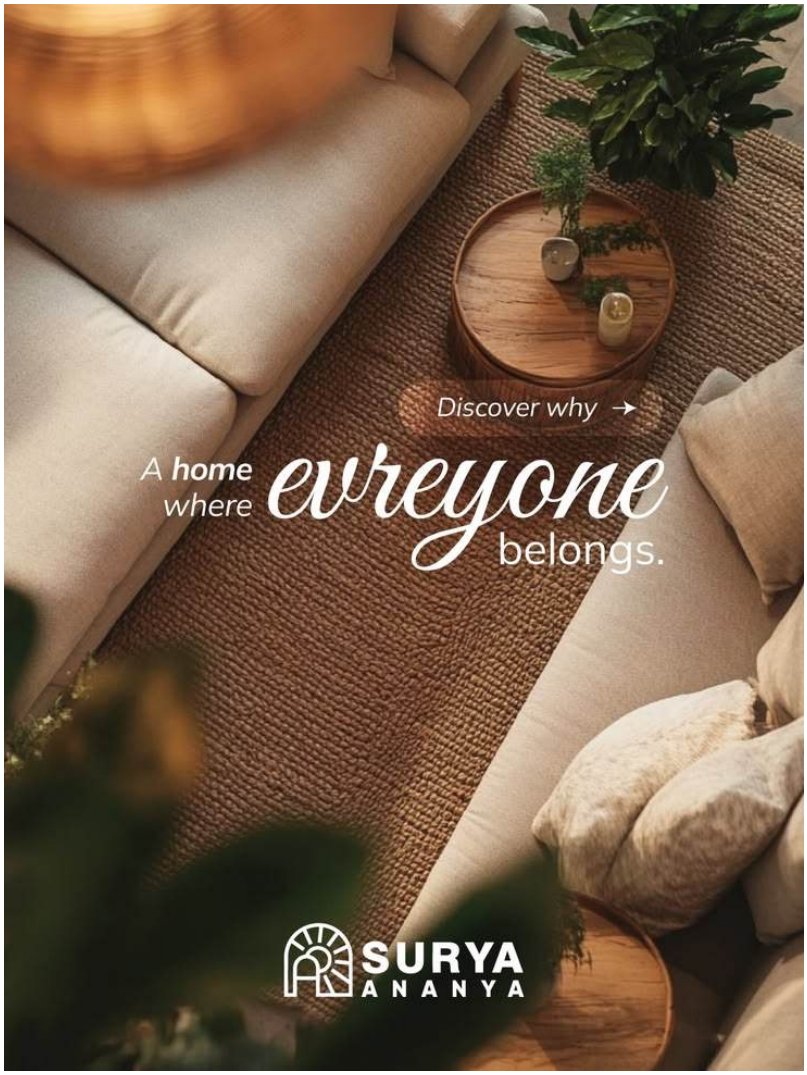

R05 · Pool edge from above: garden shadows and hospitality atmosphere

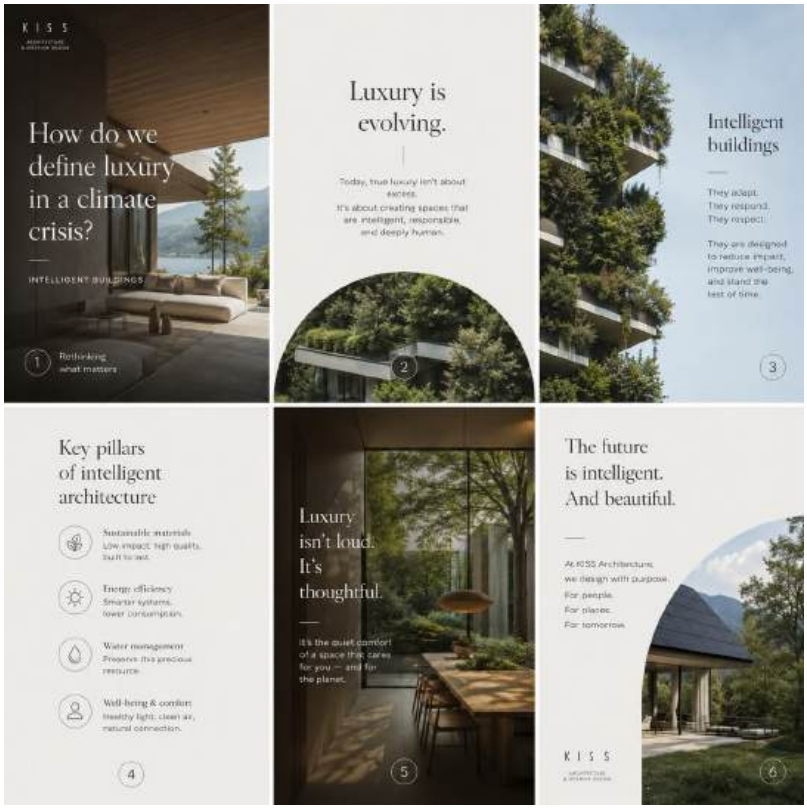

R06 · Double-height living space: furniture, timber and garden depth

R07 · Sofa and woven rug: tactile everyday material detail

R08 · Editorial architecture and nature montage: tonal variation

R09 · Moody timber interior: intimate material and lighting detail

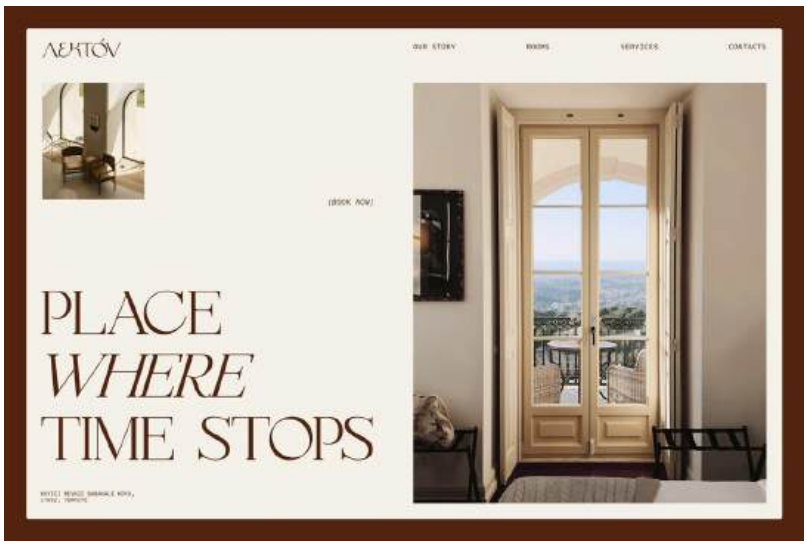

R10 · Social terrace beside water: quiet human activity

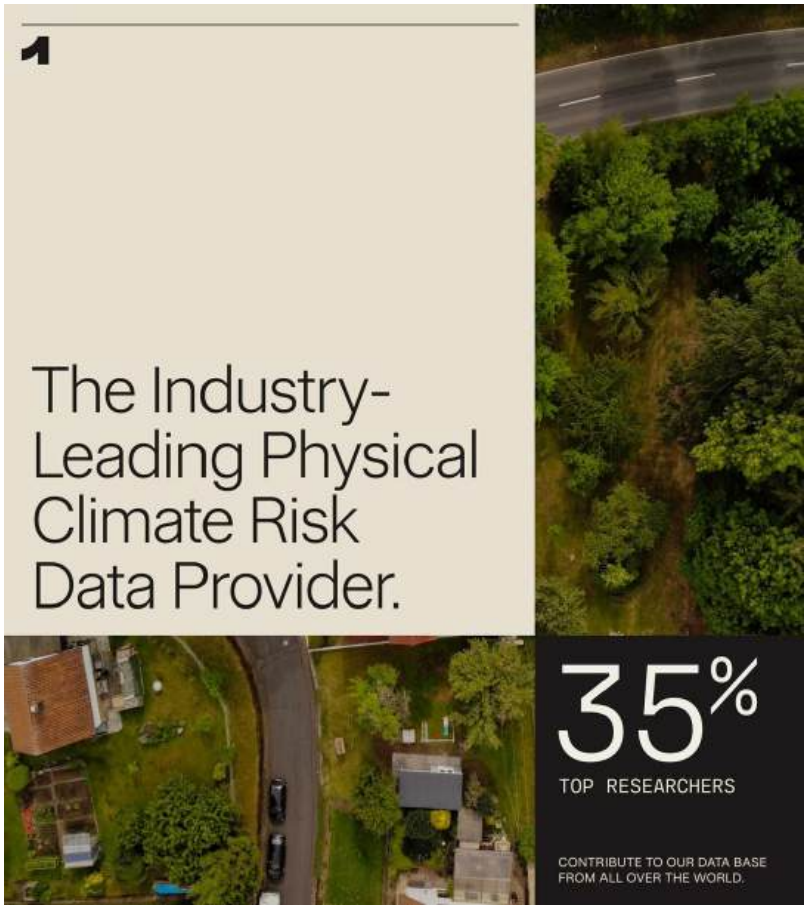

R11 · Quiet threshold: deep eave, chair and framed greenery

R12 · Doorway and sea view: framed depth, not its typographic theme

R13 · Aerial neighbourhood: land and context, not its statistic

R14 · Editorial aerial cover: image balance, not embedded text or number

Supplementary plan reconciliation

Integrated 14 October 2026. Source: attached Excello_Website_Upgrade_Plan.pdf, 24 pages, dated 09 October 2026. The Google Doc remains the master. The PDF supplies supporting requirements and explanatory layout annotations; it does not replace newer approved routes, copy, visual rules or mobile decisions. No separate editable PDF comment annotations were found.

What remains authoritative

25 active page briefs; /services combines architecture/interiors and build/construction; Homes stays /services (Homes section); /developments covers lands, housing complexes, hospitality and apartments, with free quick land feasibility. About & Team stays /team. House4All remains pending branding. /homev2 is excluded. Desktop and mobile have separate task-led compositions. No satellite/city/hill/coast film or required Three.js. The master's current palette and DM Sans direction supersede the PDF's proposed serif/font tokens.

Visitor journey and actions | PDF pages 1–4 and 8–9

Retain Your land → Your possibilities → Your investment → Our process and people → Relevant proof → Your next step. Make route choice and enquiry available before a long narrative. Separate commissioning a home/development from buying an apartment. Keep Tell us about your dream as the main enquiry action, the free quick land check as the development entry, and View available apartments for buyers. The PDF's reordered homepage and generic Discuss your project hero do not replace the approved Home tab.

Routes and templates | PDF pages 5–7 and 13

Map proposed /services/architecture-design, /services/interiors, /services/design-build and /services/construction into the relevant /services sections. Map /homes into /services (Homes section); /apartment-development into /developments (Apartments section); /hospitality into /developments (Hospitality section); /land-feasibility into /developments (Free quick land feasibility section). Do not create these as extra pages from the PDF. Its /about and person-page proposals remain within the combined team page or future backlog. The Aathavan project and availability pages fulfil the current buyer journey; a new sales/individual-unit route needs a separate scope decision.

Visual and motion annotations | PDF pages 3 and 8–12

Carry forward legible offer/action, early route access, real proof, concise context and recoverable paths. Independently design the mobile sequence rather than enforcing the PDF's stacked-desktop approach. Keep the current master's motion limits; page 10's geographic scroll film and frame/video prototype are rejected by the newer decision. Use rounded cards, consistent media frames and spacing without copying identical content patterns across all sections.

Operations and growth | PDF pages 14–23

Accepted supplements: approved read-only inventory and stale states; short contextual enquiries with durable receipt; maintained calculator rules; minimal public CMS and private operational data separation; content relationships and integrity; intent-led search and localisation; performance budgets; outcome definitions; ownership and release/rollback checks. These are implementation specifications, not evidence that integrations, speed or compliance have already passed.

Platform and facts | PDF pages 2, 14, 16 and 24

Retain the existing Sites project for the design prototype. The PDF's Framer recommendation is a production-platform option to assess against existing content, integration and performance needs; it does not authorise an immediate migration or second CRM. Reconfirm Aathavan facts, inventory, price terms and programme against approved current records. Treat PDF public-site observations from 09 October as historical evidence, not a current audit.

Source map and outstanding inputs

PDF pages 1–4: positioning/evidence; 5–7: page roles; 8–9: annotated homepage/copy; 10: superseded scroll story; 11–13: accessibility/components/templates; 14: buyer/product flows; 15: enquiries/chat/calculator; 16–17: architecture/data; 18–19: search/localisation; 20–21: performance/measurement; 22–23: migration/backlog; 24: sources and inputs.
Obtain current analytics and Search Console data, URL/canonical inventory, approved service scopes and bios, photography rights, inventory source/price book, calculator rules, lead integration contract, response ownership and reviewed translations. Pending product inputs remain in Product Pending Branding.

Enquiry, chat and estimate integration

Supplement from PDF page 15, with master Developments/Mobile UX rules taking precedence. Use one central enquiry authority and existing approved operational systems. This is a build contract, not confirmation that services are connected.

Short first enquiry

Collect name, one preferred contact path and project intent. Require the matching email or phone, not both. General enquiry location, budget, timeline and notes stay optional or progressive. Free quick land check requires location as specified in Developments; size stays optional and Still exploring is accepted. Carry project, unit or estimate context automatically and keep it editable. Do not require the family/living/investment question, a deed or NIC.

Flow and recovery

Entry → relevant page → short enquiry → server validation → durable storage → downstream assignment → genuine receipt → responsible person. On failure, preserve inputs, identify the error, offer retry and direct contact. Use a unique submission ID so retries do not create duplicate leads. A CRM delivery failure must be recoverable without losing an accepted enquiry. Never claim a consultation booked, unit reserved or email delivered merely because a button was clicked.

Truthful interface states

Define default, focused, invalid, submitting, accepted and failed. Associate field errors and announce receipt. Website receipt confirms durable acceptance, not a sale. If only a WhatsApp draft opens, use Prepare my WhatsApp message or Prepare my WhatsApp request and explain that the visitor must review and Send. Track draft opens separately from accepted enquiries.

Privacy and routing

Show concise processing information linked to reviewed policies. Keep optional marketing consent separate and unchecked. Do not include names, contact details or notes in analytics URLs/events. Preferred language can be optional; do not infer identity or language from ethnicity/religion. Route home/design/build requests, development/free-check requests and unit enquiries to the assigned owner without collecting the same information again.

Chat

Use one optional launcher for WhatsApp and web chat; load web chat on demand. Keep direct contact available if the widget fails. Answers use approved service/sales knowledge and current inventory authority. Hand off appointment scheduling, binding quotation, reservation, dispute and technical judgement to a person. A chatbot must not invent availability, prices, appointments or professional decisions.

Calculator integration

Keep the maintained calculator as the rule authority. Version rates, inputs, coefficients, assumptions, inclusions and exclusions. Show the estimate before optional enquiry. Store the rate version and estimate reference with the result; send its context into enquiry. Chat calls the same validated calculation rules rather than generating independent arithmetic or rates. Expired data, missing inputs and zero must have different meanings.

Integration acceptance

Test invalid input, double-click, retry after connection loss, durable receipt, failed downstream delivery, preserved form values, editable prefilled context, widget failure and unit/estimate routing. Confirm accepted receipt from the actual backend and responsible team. Owners and response times must be agreed; do not publish an unconfirmed response promise.

Content and operational data

Supplement from PDF pages 12–13 and 16–17. Reuse current CMS, approved inventory and central lead platform. A custom integration layer or database is conditional on real gaps, not required solely by the visual redesign.

Public and private boundaries

Public CMS: approved services, project evidence, people, articles, assets and policy copy. Public inventory: minimal approved unit facts, display prices/status and verification time. Private operations: customers, enquiries, assignments, activity, internal notes and documents. Keep credentials server-side; do not publish customer identities or private operational fields. Editors need appropriate roles and an audit trail.

Project and service records

Project: stable ID, unique slug, title, category, location, controlled status, verified dates, exact Excello scope and related service IDs. A project can link to multiple services through a join relation. Separate architectural evidence from property-sales intent even where they share a record. Unknown or disputed facts remain unset/review-pending; do not resolve them through generated imagery.

People, articles and assets

Person: verified name, role, staff/consultant classification, approved bio and portrait. Article: unique slug, author/reviewer references when verified, publication/review dates, sources, related project/service and approval state. Only genuine authorship creates a person-to-article link.
Asset: source URL/file, related project/article, photo/render/concept type, caption, alt text, focal point/crops, rights holder and permission. Proof assets require accurate attribution and media status. Existing Image Register remains the creative asset authority.

Development, units and history

Development and Unit: stable IDs; unique development + unit code; floor; bedrooms; positive area with unit and area basis; controlled status; verification timestamp; record version.
Price/status history: unit, currency, approved amount, effective dates, verifier and editor. Use decimal money or integer minor units, not binary floating-point currency. Keep history chronological and exclude personal buyer information from the public view.

Enquiry, contact and activity

Contact can have many legitimate enquiries. Enquiry: stable ID, intent, optional project/unit/estimate references, controlled source classification, owner, status and unique idempotency key. Do not deduplicate all future enquiries merely because a phone matches. Activity/assignment: enquiry, event type, time, responsible user and outcome; append outcome history with restricted access.

Rate versions and estimates

Rate version: effective/review date, coefficients, maintained inclusions/exclusions and rule version. Estimate: inputs, output, currency, assumptions, rate version and optional enquiry reference. Preserve reproducibility of past estimates when rates change. An unknown budget/date is null, not zero. Store timestamps consistently and display local dates/times for Sri Lanka.

Integrity, deletion and sync

Validate positive dimensions and areas, controlled categories/statuses and unique slugs/unit codes. Do not silently drop a development with units or an enquiry with activity. Archive public records instead of removing useful evidence; personal-data retention/deletion follows the reviewed operational policy. Integrations use authenticated APIs, server validation, rate limits, a durable retry queue and reconciliation with the CRM/inventory source.

Presentation contract

ProjectCard: title, location, scope, status, media type and destination. UnitCard: code, floor, bedrooms, area basis, approved price terms, verified time and enquiry context. Shared components render long names, missing optional images, translated text and keyboard focus. Loading, empty, unavailable, stale and retry states carry a clear next action. Fetching and edit permissions stay outside presentation components.

Search and content discoverability

Supplement from PDF pages 18–19 and source register page 24. These are intent/topic and implementation requirements, not measured keyword volumes, rankings or a current search audit.

Topic-to-route map

Architecture/design/build intent → / and /services, with distinct brand and appointment purposes.
Custom homes/compact plots → /services (Homes section) and the small-plot article.
Land, housing-complex, apartment and hospitality development → relevant /developments sections and free quick land check.
Apartment buying in Dehiwala → Aathavan project and /aathavan-availability.
Cost planning → cost guide and calculator with different reading/tool roles.
Appointment comparison → the existing delivery-comparison article.
Compact-home product → pending branding brief only; no indexed launch page or price claim yet.

Page and internal-link rules

Each active page gets one meaningful H1, distinct title/description, readable HTML and canonical URL. Services link to relevant project evidence and enquiry; projects link back to their service and useful insight; articles link to the relevant service/tool; Aathavan evidence and availability link to one another. Use descriptive anchors. Preserve established project/article/tool routes and avoid orphaned campaigns or duplicate thin service pages.

Crawlable project evidence

All approved projects and descriptive links must exist in server/static-readable content before client-side filtering. A human-visible archive can still have a crawl/render discovery problem; diagnose these separately. Filters enhance the complete archive, retain result/selected/reset states and do not produce an empty default HTML shell. Include only verified location and stage options; proposed status needs a suitable filter representation when present.

Metadata and structured data

Keep Home title Architecture, Design and Build in Sri Lanka | Excello. Descriptions must accurately reflect the functions available. Availability metadata cannot promise live prices if the

integration is not live. Consider Organisation/LocalBusiness where eligible, BreadcrumbList and Article only when supported and consistent with visible facts. Validate against current official documentation before implementation; do not invent ratings, authors or FAQ eligibility.

SEO, AEO and GEO

Give practical answers first, identify Excello and relevant places consistently, use original project evidence and reviewed/dated facts. Useful, accessible, discoverable content supports conventional and AI-assisted search. Do not promise AI citations, rankings or rich results. Special FAQ markup or llms.txt is not a substitute for sound content and crawlability. No mass-produced near-identical location pages or generic AI summaries.

Localisation

Use approved business name/address/contact consistently. Prioritise professionally reviewed English, Sinhala and Tamil pages according to demand; pilot high-value Aathavan/contact content before full rollout. Chinese buyer material follows available approved content and support. Let people choose language. Each locale requires reviewed copy, correct locale URL, reciprocal hreflang and appropriate canonical, with platform support checked first.

Migration and source references

Create the actual old-to-new URL map before redirects. A permanent /homev2 retirement points to / only after the replacement is verified; record the actual supported permanent redirect and query handling. No redirect chain or unrelated blanket destination. A missing route needs a real recovery page and correct status.
Reference URLs listed in PDF page 24, for verification at build time:
https://developers.google.com/search/docs/appearance/ai-features ;
https://developers.google.com/search/docs/crawling-indexing/301-redirects ;
https://developers.google.com/search/docs/fundamentals/using-gen-ai-content . These were supplied references, not newly checked in this document update.

Measure the journey and real outcomes

Supplement from PDF pages 20–21. No conversion uplift, speed score or current lead-quality result is established by this plan.

Event definitions

route_selected: person chooses home/development/buying route; supporting intent signal.
project_viewed, calculator_completed and unit_enquiry_started: supporting task signals.
whatsapp_draft_opened: draft/launcher opened; does not establish a sent message.
enquiry_accepted: backend confirms durably stored enquiry, deduplicated by submission ID.
appointment_attended: responsible person records the actual consultation/site visit.
proposal_sent, reservation_confirmed or contract_signed: verified operational stages, not website clicks.

Measures and owners

qualified_enquiry_rate = qualified enquiries / accepted enquiries, using an agreed definition. Sales/design review by intent and source.
Organic landing conversion: compare sessions and accepted/qualified enquiries by page/device over comparable periods. Marketing owns interpretation.
Inventory freshness: age of approved verification time, sync failures and reconciliation discrepancies. Sales owns facts; developer owns integration monitoring.
Performance/errors: field vitals where available, form failure rate and client/integration errors. Developer reviews after releases.
Marketing maintains content calendar; design verifies scope/technical copy; sales verifies units/prices/follow-up; named people approve bios; publisher checks assets/links/metadata/translations. Roles are proposed until assigned.

Privacy and attribution

Keep names, phone numbers, email, free text and sensitive source URLs out of analytics payloads. Carry controlled acquisition/source tags within the permitted enquiry records. Advertising/analytics choices follow reviewed policies. Report modelled attribution as uncertain. Never inflate lead totals with WhatsApp opens, brochure downloads or repeated retry events.

Experiments

Capture a comparable baseline first. Test one meaningful hypothesis at a time: clearer route choices and wrong-route enquiries; a short direct form versus external-form friction; better proof placement. Evaluate qualification and attended outcomes, not engagement alone. The deleted geographic scroll film is outside the experiment backlog. Low traffic may require qualitative enquiry review instead of a weak A/B conclusion.

Performance targets and proof

Use Motion and Performance as the main contract. Proposed targets: LCP ≤ 2.5 s, INP ≤ 200 ms and CLS ≤ 0.1 at the 75th percentile where field data exists. Aim for approximately 1 MB initial mobile transfer and 150–300 KB mobile hero where image quality permits; proposed added interaction JavaScript budget ≤ 150 KB compressed, subject to measured platform baseline. Test cold-cache mobile, loading failures, long scroll, menu/filter opening and input. Stop experiments that harm accessibility or enquiry delivery.

Release, migration and recovery

Supplement from PDF pages 22–23. This document update does not deploy a website, change access, reserve property or remove live routes.

Before the rollout

Back up content, source where available, approved assets, current URL inventory, canonicals and redirect rules. Keep a known rollback version and responsible release owner. Build/review the shared system and one example of each template on staging. Prevent staging/preview content from becoming a competing indexed site.

Phased delivery with dependencies

Phase A: approve scope, inventory/price authority, calculator rules, enquiry contract, response ownership and current route baseline; repair broken conversion paths first.
Phase B: shared components plus Home, Services and Developments, with independent desktop/mobile designs; one actual case study and short enquiry tested together.
Phase C: Aathavan project/buyer flow, availability and unit-context enquiries; approved/stale/empty states reconcile with real records. Pending compact-home product remains blocked by branding and scope approval.
Phase D: remaining project/article/team/process/legal templates, filters, internal links and actual redirect map.
Phase E: reviewed priority-language pages, measurement and restrained motion refinements after usability/performance evidence.
The PDF’s week ranges are indicative planning estimates, not approved dates or staffing commitments. No satellite/Three.js film phase is retained.

Release acceptance

Navigation, service anchors and all enquiry/tool/unit paths work.
Forms persist once, preserve retries, route context correctly and show truthful receipt.
Inventory/prices match approved records; stale/unavailable states work.
Project facts/scope/media labels and photography rights are approved.
Keyboard, menu/dialog focus, contrast, zoom, screen-reader samples and reduced motion pass actual checks.
Desktop, independently designed mobile and tablet tasks are reviewed at representative sizes and either side of content-driven breakpoints.
URLs, canonicals, redirects, robots, sitemap and readable project listings are verified.
Performance is measured; analytics excludes personal data; rollback and monitoring are ready.

After release

Immediately verify lead receipt, inventory sync, key navigation, calculator output, redirects, analytics and priority pages. Review enquiry quality and inventory freshness weekly, content/search monthly. Record dated changes and responsible owners. Roll back or disable an effect/integration when it causes lost enquiries, stale claims or inaccessible tasks.

Security and recovery scope

Historical injected spam is a reason to review remaining legacy hosting/DNS/redirects, indexed unrelated URLs and access; it is not evidence of a current compromise. Check publishing/domain ownership, least privilege and available MFA. Validate/rate-limit public inputs; restrict inventory edits; keep secrets server-side and third-party embeds approved. Verify backup restoration. Do not disavow, deindex or remove records solely on an unverified vendor warning.

System pages and deferred scope

Provide meaningful not-found and service-error recovery states with correct HTTP behaviour, without treating them as extra marketing pages in the 25-page inventory. Defer a second CRM, custom database, heavy 3D, full translation rollout and advanced unit configurator until an actual operational need is demonstrated. Production platform choice follows maintainability, integration and performance evidence.
